Econometrics Franklin M. Fisher,1991 Franklin Fisher s work on the underlying structure of econometric models has been fundamental to the development of the subject Fisher s early discovery of block recursive systems and his results on continuity for small specification errors provided the foundation for all structural estimation *Econometrics* Franklin M. Fisher,1992 **Models, Methods, and Applications of Econometrics** Albert Rex Bergstrom,1993 The twenty especially commissioned essays in this volume cover a wide field of recent and topical research dealing with both theory and application of econometrics The contributors comprise an international and distinguished group of economists econometricians modelers and statisticians The volume will be of wide interest to all those concerned with modelling forecasting and other applications of econometrics The volume is divided into five parts according to separate themes of research that include continuous time modelling finite sample theory dynamic econometric modeling and empirical applications in macroeconomics industry and finance The essays make methodological empirical and theoretical advances in each of these fields including many recent topics of intense research such as nonlinear modeling parameter parsimony business cycles Euler equation methodology rational expectations vector autoregressions cointegrated systems unit roots and semiparametric models The volume is dedicated to A R Bergstrom and contains a review of his research in these various fields and his essay What is Econometrics **Selected Papers Of Lawrence R Klein: Theoretical Reflections And Econometric Applications** Kanta Marwah,1997-06-01 This volume contains selected papers of Lawrence R Klein in economics econometric theory and applications in modeling forecasting macroeconomic analysis international economics and public policy Nobel Laureate Lawrence Klein s bibliography spans a half century including books articles and chapters in conference proceedings festschriften and thematic books One such volume of solely scientific collections mainly from his relatively early articles has already been published The present volume is different it includes some articles but largely chapters or book excerpts that were mostly written since 1980 the approximate cut off date of the prior volume and the year of his Nobel Prize Also it includes things that were published in very limited or obscure editions Thus it provides a more complete picture of his scholarly career and his current reflections on the state of economic science All these writings are in the vanguard of thinking about economics in a global domain The thirty five plus selections are organized in five parts by major themes An editorial commentary introduces each part The introductory chapters include Klein s autobiographical research commentary and his professional life philosophy Essays in Honor of Joon Y. **Contributions to Econometric Theory and Application** R.A.L. Carter, J. Dutta, A. Ullah, 2012-12-06 The purpose of this volume is to honour a pioneer in the field of econometrics A L Nagar on the occasion of his sixtieth birthday Fourteen econometricians from six countries on four continents have contributed to this project One of us was his teacher some of us were his students many of us were his colleagues all of us are his friends Our volume opens with a paper by L R Klein which discusses the meaning and role of exogenous variables in structural and vector autoregressive econometric models Several examples from recent macroeconomic history are presented and the notion of Granger causality is discussed This is followed by two papers dealing with an issue of considerable relevance to developing countries such as India the measurement of the inequality in the distribution of income The paper by C T West and H Theil deals with the problem of measuring inequality of all components of total income within a region rather than just labour income It applies its results to the regions of the United States The second paper in this group by N Kakwani derives the large sample distributions of several popular inequality measures thus providing a method for drawing large sample inferences about the differences in inequality between regions The techniques are applied to the regions of Cote d'Ivoire The next group of papers is devoted to econometric theory in the context of the dynamic simultaneous linear equations model The first by P J

[Continuous Time Modeling in the Behavioral and Related Sciences](#) Kees van Montfort, Johan H.L. Oud, Manuel C. Voelkle, 2018-10-11 This unique book provides an overview of continuous time modeling in the behavioral and related sciences It argues that the use of discrete time models for processes that are in fact evolving in continuous time produces problems that make their application in practice highly questionable One main issue is the dependence of discrete time parameter estimates on the chosen time interval which leads to incomparability of results across different observation intervals Continuous time modeling by means of differential equations offers a powerful approach for studying dynamic phenomena yet the use of this approach in the behavioral and related sciences such as psychology sociology economics and medicine is still rare This is unfortunate because in these fields often only a few discrete time sampled observations are available for analysis e.g. daily weekly yearly etc However as emphasized by Rex Bergstrom the pioneer of continuous time modeling in econometrics neither human beings nor the economy cease to exist in between observations In 16 chapters the book addresses a vast range of topics in continuous time modeling from approaches that closely mimic traditional linear discrete time models to highly nonlinear state space modeling techniques Each chapter describes the type of research questions and data that the approach is most suitable for provides detailed statistical explanations of the models and includes one or more applied examples To allow readers to implement the various techniques directly accompanying computer code is made available online The book is intended as a reference work for students and scientists working with longitudinal data who have a Master's or early PhD level knowledge of statistics

**Introduction to Linear Regression Analysis** Douglas C. Montgomery, Elizabeth A. Peck, G. Geoffrey Vining, 2015-06-29
