Economic Growth Theory Wei-Bin Zhang, 2018-01-18 This book develops a new theoretical framework to examine the issues of economic growth and development Providing analysis of economic dynamics in a competitive economy under government intervention in infrastructure and income distribution the book develops a unique analytical framework under the influence of traditional neoclassical growth theory However in a departure from neoclassical growth theory it examines both the Solow Swan and the Ramsey growth models introducing a utility function which treats consumer choices in ways critically different to previous approaches Using practical examples and models the book demonstrates how this new direction can effectively analyze the key issues of economic growth in a compact and comprehensive manner [A Theory of International Trade](#) Wei-Bin Zhang, 2012-12-06 Over more than two centuries the development of economic theory has created a wide array of different concepts theories and insights My recent book Capital and Knowledge Zhang 1999a shows how separate economic theories such as the Marxian economics the Keynesian economics the general equilibrium theory and the neoclassical growth theory can be examined within a single theoretical framework The Capital and Knowledge constructs an economic theory to account for the phenomena explained by the main economic theories of national economies in a unified manner It tries to draw together the disparate branches of economics into a single organized system of knowledge This book is a part of my economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space Zhang 1996a As an extension of the Capital and Knowledge which is focused on the dynamics of national economies this book is to construct a theory of international trade We are concerned with dynamic relations between international division of labor division of consumption and determination of prices structure in global economy We examine dynamic interdependence between capital accumulation knowledge creation and utilization economic growth price structures and international trade patterns under free competition Our theory is constructed on the basis of a few concepts within a compact framework **Monetary Growth Theory** Wei-Bin Zhang, 2009 Chapter 1 Money and growth theory chapter 2 Money as a store of value chapter 3 Money in utility and production functions chapter 4 Money in advance approaches chapter 5 Unemployment and money chapter 6 Preference change and habit formation chapter 7 Monetary growth with urban structure chapter 8 Money in multi regional and growth economies chapter 9 Money growth and international trade chapter 10 Money and economic complexity *Capital and Knowledge* Wei-Bin Zhang, 2012-12-06 This book constructs an economic theory which may be studied like the I Ching it contains multiple patterns within a grand whole it consists of multiple parts and each part represents itself as a consistent unity The book is the key part of my economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space Zhang 1996a It has taken me a long laborious process to systematize the ideas represented in this book formulating the grand vision

in Schumpeter's sense searching for or creating many ideas of which only a few have survived and now completing this book to make a tell I remember Schumpeter's attitude new ideas unless carefully elaborated painstakingly defended and pushed simply will not tell Schumpeter 1934 Keynes observation the difficulty lies not in the new ideas but in escaping from the old ones which ramify into every corner of our minds Keynes 1936 as well as Confucius recognition of the importance of timing If my principles are to advance it is so ordered If they are to fall to the ground it is so ordered Confucius 1992

A Nonlinear Dynamic Theory Of Economic Growth And Environmental Change

Wei-bin Zhang, 2025-08-08 This book focuses on economic theory and advances environmental economics by integrating various theories of modern economics in a comprehensive and analytical framework The book is composed of many models each emphasizing interactions between the environment and economic technological institutional structural or gender variables The theory is constructed on the basis of a few concepts within a compact framework and it permits valid generalizations from one special modeling structure to another and thus deepen understanding of the complexities of political social and economic dynamics in a systematical manner Each model can be mathematically integrated with any other model in the book The book also provides a computational procedure for simulation so that anyone can observe dynamics of the system using computers

An Economic Theory of Cities Wei-Bin Zhang, 2002 This book is concerned with dynamic relations between urban division of labor division of consumption and determination of prices structure within a perfectly competitive framework in spatial economy Our analytical framework examines the issues related to urban dynamics raised in the traditional urban economic theories and provides insights into the issues related to interdependence between knowledge creation and utilization and spatial economies examined by the new urban regional economic theory The comparative advantage of our theory is that in providing rich insights into the complex of urban evolution it uses only a few concepts and simplified functional forms and accepts a few assumptions about the behavior of consumers producers and institutional structures over space

Theory Of Interregional And International Economics, A: Integrating Neoclassical Growth Theory And New Economic Geography Wei-bin Zhang, 2024-12-13

The contemporary global economy is characterized by complex and nonlinear dynamics of interregional and international economic interactions The complexity is associated with endogenous changes in wealth human capital technology population economic structures and gender relations It is obviously necessary to construct a theory to connect all these changes in a single analytical framework with minimum assumptions Nevertheless mainstream economic theory on spatial economics is mostly static and partial This book expands on spatial economics by integrating various theories of spatial economics into a comprehensive and analytical framework through mathematical modelling and computing This book is part of the author's general economic theory with endogenous population capital knowledge preferences sexual division of labor and consumption institutions economic structures and exchange values over time and space It focuses on further developing the theory of interregional and international economies and encompasses dynamic relations between population growth human capital and wealth accumulation environmental change gender institutions market structures the division of labor and consumption and the determination of price structure among regions and nations in a single analytical framework

A Theory of Interregional Dynamics Wei-Bin Zhang, 2012-09-07 Over more than two centuries the development of economic theory has created a wide array of different theories concepts and results Nevertheless there is no general theory which unifies these varied theories into a comprehensive one Economics has been split between partial and conflicting representations of the functioning of market economies We have a collection of separate theories such as the Marxian economics the Keynesian economics the general equilibrium theory and the neoclassical growth theory These diverse economic theories have co existed but not in a structured relationship with each other Economic students are trained to understand economic phenomena by severally incompatible theories one by one in the same course Since the end of Second World War many crises in economic theory have been announced The economist experienced the crisis of the general equilibrium economics the crisis of the neoclassical growth economics the crisis of the Keynesian economics not to mention the crises of the Marxian economics It is quite reasonable to expect the loss of confidence in theoretical economics even among professional economists after so many crises in a very short period of time But a crisis offers new opportunities for change either for better or for worse The past crises in theoretical economics may be perceived as a historical opportunity to

construct a general economic theory by which the traditional theories are integrated into a higher whole

Differential Equations, Bifurcations, and Chaos in Economics Wei-Bin Zhang, 2005 Although the application of differential equations to economics is a vast and vibrant area the subject has not been systematically studied it is often treated as a subsidiary part of mathematical economics textbooks This book aims to fill that void by providing a unique blend of the theory of differential equations and their exciting applications to dynamic economics Containing not just a comprehensive introduction to the applications of the theory of linear and linearized differential equations to economic analysis the book also studies nonlinear dynamical systems which have only been widely applied to economic analysis in recent years It provides comprehensive coverage of the most important concepts and theorems in the theory of differential equations in a way that can be understood by any reader who has a basic knowledge of calculus and linear algebra In addition to traditional applications of the theory to economic dynamics the book includes many recent developments in different fields of economics

International Trade Theory Wei-Bin Zhang, 2008-04-23 The development of international trade theory has created a wide array of different theories concepts and results Nevertheless trade theory has been split between partial and conflicting representations of international economic interactions Diverse trade models have co existed but not in a structured relationship with each other Economic students are introduced to international economic interactions with severally incompatible theories in the same course In order to overcome incoherence among multiple theories we need a general theoretical framework in a unified manner to draw together all of the disparate branches of trade theory into a single ganized system of knowledge This book provides a powerful but easy to operate engine of analysis that sheds light not only on trade theory per se but on many other dim sions that interact with trade including inequality saving propensities education research policy and knowledge Building and analyzing various tractable and flexible models within a compact whole the book helps the reader to visualize economic life as an endless succession of physical ca tal accumulation human capital accumulation innovation wrought by competition monopoly and government intervention The book starts with the traditional static trade theories Then it develops dynamic models with capital and knowledge under perfect competition and or monopolistic competition The uniqueness of the book is about modeling trade dyn ics

economies this book is to construct a theory of urban economies We are concerned with dynamic relations between division of labor division of consumption and determination of prices structure over space We examine dynamic interdependence between capital accumulation knowledge creation and utilization economic growth price structures and urban pattern formation under free competition The theory is constructed on the basis of a few concepts within a compact framework The comparative advantage of our theory is that in providing rich insights into complex of spatial economies it uses only a few concepts and simplified functional forms and accepts a few assumptions about behavior of consumers producers and institutional structures
