Economics Of Science And Innovation:

Recent Developments in the Economics of Science and Innovation Albert N. Link, Cristiano Antonelli, 2014 This volume presents the most important contributions of the last decade in the fields of science and innovation demonstrating the key relationship between the two Early chapters emphasize the intrinsic characteristics of knowledge as an economic activity and later chapters document the importance of science as an input to technology and innovation This continuum has pushed the field of economics to investigate in detail the processes that shaped the generation dissemination and exploitation of technological knowledge The ideas of nearly fifty eminent researchers are assembled in this volume Students of the field at all stages of their careers will benefit from reading this collection

The Economics of Science and Technology M.P. Feldman, Albert N. Link, Donald S. Siegel, 2012-12-06 Science and technology have long been regarded as important determinants of economic growth Edwin Mansfield 1971 pp 1 2 a pioneer in the economics of technological change noted Technological change is an important if not the most important factor responsible for economic growth without question it is one of the most important determinants of the shape and evolution of the American economy Science and technology are even more important in the new economy with its greater emphasis on the role of intellectual property and knowledge transfer Therefore it is unfortunate that most individuals rarely have the opportunity to explore the economic implications of science and technology As a result the antecedents and consequences of technological change are poorly understood by many in the general public This lack of understanding is reflected in a recent survey conducted by the National Science Board 2000 summarized in Science Engineering Indicators As shown in Table 1 1 the findings of the survey indicated that many Americans despite a high level of interests in such matters are not as well informed about technological issues as they are about other policy issues As shown in the table individuals self assess based on a scale from 1 to 100 their interest in science and technology policy issues as being relatively high yet they self assess their knowledge or informedness about these issues relatively lower

The Economics of Science David Tyfield, 2012 Dramatic and controversial changes in the funding of science over the past two decades towards its increasing commercialization have stimulated a huge literature trying to set out an economics of science Whether broadly in favour or against these changes the vast majority of these frameworks employ ahistorical analyses that cannot conceptualise let alone address the questions of why have these changes occurred and why now Nor therefore can they offer much insight into the crucial question of future trends Given the growing importance of science and innovation in an age of both a globalizing knowledge based economy itself in crisis and enormous challenges that demand scientific and technological responses these are significant gaps in our understanding of important contemporary social processes This book argues that the fundamental underlying problem in all cases is the ontological shallowness of these theories which can only be remedied by attention to ontological presuppositions Conversely a critical realist approach affords the integration of a realist political economy into the analysis of the economics of science that does

afford explicit attention to these crucial questions a cultural political economy of research and innovation CPERI Accordingly the book sets out an introduction to the existing literature on the economics of science together with novel discussion of the field from a critical realist perspective In arguing thus across levels of abstraction however the book also explores how concerted engagement with substantive social enquiry and theoretical debate develops and strengthens critical realism as a philosophical project rather than simply applying it While the first of these two volumes argues how mainstream economics is inadequate to the task of an explanatory and critical economics of science the challenge in this second volume is to examine the strengths and weaknesses of disciplines offering more promising starting points Two social scientific disciplines are particularly promising candidates starting from economy or science namely heterodox political economy and science technology studies respectively Synthesising these into an economics of science however still encounters considerable hurdles in that there remain some fundamental and mutual philosophical incompatibilities Formulating an economics of science thus demands that both economics and science be redefined The book explores how a critical realist approach affords some common ground upon which this productive synthesis may be pursued in the form of a cultural political economy of research and innovation CPERI

Innovation Policy in the Knowledge-Based Economy M.P. Feldman, Albert N. Link, 2001-02-28 Scholars in the science and technology field have not collectively questioned much less proposed an agenda for policy makers Now is an appropriate time for such an undertaking First there is a growing belief that the U S national research and development system like that of many industrial nations is changing due to global competitive pressures and advancements in information technology and electronic commerce Second industry s R D relationship with the academic research community is changing not only because of the global competition but also because of alterations in the level of government support of fundamental research As a result policy makers will need to rethink their approaches to science and technology issues This volume is a collection of essays by scholars about innovative policy in the knowledge based economy By knowledge based economy we mean one for which economic growth is based on the creation distribution and use of technology As such innovation policy in such an economy must enhance the creation distribution and use of knowledge that leads to the creation distribution and use of technology This volume considers elements of an innovation policy innovation policy and academic research innovation policy in electronic commerce and innovation policy and globalization issues

The Roles of Immigrants and Foreign Students in US Science, Innovation, and Entrepreneurship Ina Ganguli, Shulamit Kahn, Megan MacGarvie, 2020-02-19 The number of immigrants in the US science technology engineering and mathematics STEM workforce and among recipients of advanced STEM degrees at US universities has increased in recent decades In light of the current public debate about immigration there is a need for evidence on the economic impacts of immigrants on the STEM workforce and on innovation Using new data and state of the art empirical methods this volume examines various aspects of the relationships between immigration innovation and entrepreneurship including the effects of changes in the number of immigrants and their skill composition on the rate of innovation the relationship between high skilled immigration and entrepreneurship and the differences between immigrant and native entrepreneurs It presents new evidence on the postgraduation migration patterns of STEM doctoral recipients in particular the likelihood these graduates will return to their home country This volume also examines the role of the US higher education system and of US visa policy in attracting foreign students for graduate study and retaining them after graduation

UNESCO science report UNESCO, 2015-11-09 There are fewer grounds today than in the past to deplore a North South divide in research and innovation This is one of the key findings of the UNESCO Science Report towards 2030 A large number of countries are now incorporating science technology and innovation in their national development agenda in order to make their economies less reliant on raw materials and more rooted in knowledge Most research and development R D is taking place in high income countries but innovation of some kind is now occurring across the full spectrum of income levels according to the first survey of manufacturing companies in 65 countries conducted by the UNESCO Institute for Statistics and summarized in this report For many lower income countries sustainable development has become an integral part of their national development plans for the next 10 20 years Among higher income countries a firm commitment to sustainable development is often coupled with the desire to maintain competitiveness in global markets that are increasingly leaning towards green technologies The quest for clean energy and greater energy efficiency now figures among the research priorities of numerous countries Written by more than 50 experts who are each covering the country or region from which they hail the UNESCO Science Report towards 2030 provides more country level information than ever before The trends and developments in science technology and innovation policy and governance between 2009 and mid 2015 described here provide essential baseline information on the concerns and priorities of countries that could orient the implementation and drive the assessment of the 2030 Agenda for Sustainable Development in the years to come

The Economics of Industrial Innovation Chris Freeman, 2012-07-26 First published in 1997 Massive technological development has changed the face of industry dramatically This text provides an analysis of the trends and dynamics of innovation in industry It has been updated with recent statistical information and examples A new section explores the
