A New Education for a New Economy: From Human Capital to Human Flourishing Tal Gilead, 2024-06-03 Providing an in depth novel analysis of education's role in today's economy by scrutinizing its theoretical underpinnings this volume critiques the suitability of the

current dominant economic framework for education and for shaping educational policymaking worldwide. Critically examining the history and philosophy that underpin our present societal understanding of the link between economics and education, the book argues for an urgent redefining of education's role in the economy based on intellectual foundations that significantly differ from our current dominant conceptions. Across seven chapters, the book posits that the adoption of a new philosophical framework, the reshaping of economic and educational aims, and the adjustment of our educational system are each necessary to better promote human flourishing. Ultimately providing a platform to entirely reconsider the idea that the primary aim of education is to serve the economic system in particular economic growth, this book will appeal to scholars, researchers, and postgraduate students studying educational policy, the philosophy of education, and the history of education. More broadly, education policymakers and academics studying education and the economy may also find this book of interest.

Education in a Digital World Neil Selwyn, 2013. Drawing on a wealth of theoretical and empirical work, *Education in a Digital World* tackles a number of pressing questions such as: how are global trends in educational technology refracted through national policies and processes? How exactly are educational technologies linked to issues of global economics and the fortunes of national and international economies? To what extent are digital technologies implicated in the commercialisation, marketization, and commodification of education? These questions and others are addressed throughout eight wide-ranging chapters which consider topics such as the national policy strategies of countries across North and South America, Europe, and East Asia; the educational technology portfolios of international organizations such as the United Nations and Microsoft; as well as the role of education and technology in international development and the on-going efforts to provide one laptop per child across low-income regions and countries. Through these examples, Selwyn develops a detailed analysis of education technology and globalisation, drawing together arguments and debates from various academic perspectives. Written in a detailed but accessible manner, this is an essential book for anyone wishing to gain a better understanding of the role of education and technology in contemporary globalised society.

The Future of Protestant Religious Education in an Age of Globalization Hyun-Sook Kim, Richard R. Osmer, Friedrich Schweitzer, 2018. Global developments have come to shape our lives economically, culturally, and even religiously. Young people growing up in a global age have to be prepared for living in this age. Economic and technological demands are important, but there also is a need for personal and social orientations that go beyond them. This book provides both insights into the Protestant tradition in education as well as its meaning for the future of the church for society and for individual persons. It follows an innovative approach by combining perspectives from three different contexts: Germany with its important Protestant starting points in the Reformation; the United States as a country which has been strongly influenced by Protestantism; and South Korea with its comparatively young Protestant tradition. The book is based on a combination of international points of view on transnational cooperation, on comparative insights, and on making constant reference to a global horizon. Its presentations

and ideas not only address globalization as a driving force behind many future developments but also demonstrate an exercise of global educational thinking Hyun Sook Kim is professor of Christian Education at the College of Theology Yonsei University Korea Knowledge and Prosperity: Navigating the Future of Work and Education Pasquale De Marco, 2025-08-15 In the rapidly evolving landscape of the 21st century the emergence of the knowledge economy has fundamentally transformed the way we work learn and live This book explores the profound implications of this new economic paradigm delving into the challenges and opportunities it presents for individuals organizations and society as a whole The knowledge economy is characterized by the increasing importance of knowledge and information as the primary factors of production rather than traditional resources like land labor and capital This has led to a growing demand for highly skilled workers and a corresponding decline in the demand for unskilled labor The rise of the knowledge economy has also had a significant impact on education In the past education was primarily focused on preparing students for specific occupations However in today s rapidly changing world it is more important than ever to develop skills that are adaptable and transferable This book provides a comprehensive examination of the knowledge economy covering a wide range of topics including The changing nature of work and employment The skills and competencies needed for the knowledge economy The role of education and lifelong learning The impact of the knowledge economy on inequality and social mobility The challenges and opportunities of the knowledge economy for businesses and organizations The future of work and the implications for society Drawing on cutting edge research and real world examples this book offers a thought provoking analysis of the knowledge economy and its implications for the future of work education and society It is essential reading for anyone seeking to understand and navigate the complexities of the modern economy If you like this book write a review

Mitch, Gabriele Cappelli, 2019-10-24 This edited collection explores the historical determinants of the rise of mass schooling and human capital accumulation based on a global long run perspective focusing on a variety of countries in Europe the Middle East Asia Africa and the Americas The authors analyze the increasing importance attached to globalization as a factor in how social institutional and economic change shapes national and regional educational trends Although recent research in economic history has increasingly devoted more attention to global forces in shaping the institutions and fortunes of different world regions the link and contrast between national education policies and the forces of globalization remains largely under researched within the field The globalization of the world economy starting in the nineteenth century brought about important changes that affected school policy itself as well as the process of long term human capital accumulation Large migrations prompted brain drain and gain across countries alongside rapid transformations in the sectoral composition of the economy and demand for skills Ideas on education and schooling circulated more easily bringing about relevant changes in public policy while the changing political voice of winners and losers from globalization determined the path followed by public choice Similarly religion and the spread of missions came to play a crucial role for the rise of schooling globally

Corporatism, Social Control, and Cultural Domination in Education Joel H. Spring, 2012 Starting with the 1972 publication of his seminal work *Education and the Rise of the Corporate State* Joel Spring has been documenting and analyzing the politics of knowledge and education Throughout his work he has explored the attempts to use education to advance the economic and political interests of dominant groups The general term he uses for the relationship between schools and power is ideological management His scholarly work first looked at the influence on American schooling of business and economic doctrines embodied in human capital theories and consumerism The next step in his exploration of the politics of knowledge was to examine these issues in the context of globalization leading to a proposed educational rights amendment to national constitutions and a new paradigm for education both of which might ensure that schools are protected from ideological management by economic and political elites Spring's indigenous background has strongly shaped his interest in the political and economic goals of schooling particularly the attempts of those in power to use schools to destroy indigenous languages and cultures In this collection Spring brings together 10 of his key writings providing an overview not just of his own career but the larger contexts in which it is situated In the Introduction he reviews the evolution and scope of his work and his earlier arguments and reflects on its central themes which are reflected in the writings selected for this volume In the World Library of Educationalists international scholars themselves compile career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings major theoretical and practical contributions so the world can read them in a single manageable volume Readers will be able to follow the themes and strands of their work and see their contribution to the development of a field as well as the development of the field itself Contributors to the series include Michael Apple James A Banks Stephen J Ball Elliot Eisner
