Ecology Technology And Culture:

Perspectives on Culture, Technology and Communication Casey Man Kong Lum, 2006 This book is an introduction to media ecology as a theory group that encompasses a coherent body of canonical literature and perspectives on understanding culture technology and communication It examines the various facets of media ecology s development since the turn of the 20th century as an intellectual tradition and how it has evolved into being through an interlocking network of researchers from multidisciplinary backgrounds such as behavioral sciences classics cultural and structural anthropology information and systems theory history of technology media and culture and so on Specifically the volume clearly explains some of media ecology s defining ideas theories or themes about the interrelationship among culture technology and communication the thinkers behind these ideas the social political and intellectual contexts in which these ideas came into being as well as how the reader may use these ideas in our times Ecology, Technology and Culture Wim Zeevers, J. J. Boersema, 1994 General Ecology Erich Hörl, James Edward Burton, 2017-05-04 Ecology has become one of the most urgent and lively fields in both the humanities and sciences In a dramatic widening of scope beyond its original concern with the coexistence of living organisms within a natural environment it is now recognized that there are ecologies of mind information sensation perception power participation media behavior belonging values the social the political a thousand ecologies This proliferation is not simply a metaphorical extension of the figurative potential of natural ecology rather it reflects the thoroughgoing imbrication of natural and technological elements in the constitution of the contemporary environments we inhabit the rise of a cybernetic natural state with its corresponding mode of power Hence this ecology of ecologies initiates and demands that we go beyond the specificity of any particular ecology a general thinking of ecology which may also constitute an ecological transformation of thought itself is required In this ambitious and radical new volume of writings some of the most exciting contemporary thinkers in the field take on the task of revealing and theorizing the extent of the ecologization of existence as the effect of our contemporary sociotechnological condition together they bring out the complexity and urgency of the challenge of ecological thought one we cannot avoid if we want to ask and indeed have a chance of affecting what forms of life agency modes of existence human or otherwise will participate and how in this planet s future Technology, Culture and Competitiveness Christopher Farrands, Michael Talalay, Roger Tooze, 2005-06-29 The first volume in a major new series this book will be an essential read for all those who need to deal with the causes and consequences of rapid technological change in an increasingly globalized world whether they be government policy makers managers of multi national corporations commentators on the international scene or specialists in and students of international politics economics and business studies The authors discuss three related areas How do we think about technology and international relations international political economy How does technology relate to competitiveness How does it influence our culture and how is it influenced by it In what sense is technology a fundamental component of national

competitive advantage and what ought national local and corporate policy to be in the light of this What is the relationship between technological innovation and global political and economic change Technology is discussed not just in an instrumental sense as a tool of power and an object of policy but equally in a transcendental sense as a key to shaping and structuring how we understand and interpret reality The final section of the book presents case studies of three core sectors of the world political economy finance aviation and automobiles

Using Words and Things Mark Coeckelbergh, 2017-06-26 This book offers a systematic framework for thinking about the relationship between language and technology and an argument for interweaving thinking about technology with thinking about language The main claim of philosophy of technology that technologies are not mere tools and artefacts not mere things but crucially and significantly shape what we perceive do and are is re thought in a way that accounts for the role of language in human technological experiences and practices Engaging with work by Wittgenstein Heidegger McLuhan Searle Ihde Latour Ricoeur and many others the author critically responds to and constructs a synthesis of three extreme idealtype untenable positions 1 only humans speak and neither language nor technologies speak 2 only language speaks and neither humans nor technologies speak and 3 only technology speaks and neither humans nor language speak The construction of this synthesis goes hand in hand with a narrative about subjects and objects that become entangled and constitute one another Using Words and Things thus draws in central discussions from other subdisciplines in philosophy such as philosophy of language epistemology and metaphysics to offer an original theory of the relationship between language and philosophy of technology centered on use performance and narrative and taking a transcendental turn

Mukherjee, 2017-11-30 Hunger is an issue which has been subject to much rigorous intellectual examination by economists philosophers sociologists NGOs and governments This volume provides a critical overview of current academic and political perspectives and then compares these views from the non hungry people with those of the hungry particularly from a broad range of poor communities in India Their views are gathered using participatory rural appraisal techniques and the scale of the material presented is unprecedented Not surprisingly the comparisons show that the perceptions of the hungry are fundamentally different from those of the non hungry It makes compelling suggestions about how best policy makers can attempt to eliminate hunger based on what the hungry themselves suggest The book also draws attention to the critical role of Common Property Resources and women in the fight against under nutrition which have so far been largely ignored

The Land beyond the Mists David Newbury, 2009-09-15 The horrific tragedies of Central Africa in the 1990s riveted the attention of the world But these crises did not occur in a historical vacuum By peering through the mists of the past the case studies presented in The Land Beyond the Mists illustrate the significant advances to have taken place since decolonization in our understanding of the pre colonial histories of Rwanda Burundi and eastern Congo Based on both oral and written sources these essays are important both for their methods viewing history from the perspective of local actors and for their conclusions which seriously challenge colonial myths about the area
