Thoughts on Economic Development in China

Ma Ying, Hans-Michael Trautwein, 2013-03-05 This book is about mutual influences of thinking about economic development in China and in the West from the 18th century until the present. Its chapters are contributed by development economists and historians of thought from China and other parts of the world. The book describes important stages in the evolution, cross fertilization and contextual modification of ideas about economic order, development and institutional change. It illustrates how Western concepts and theories have been adopted and adapted to Chinese conditions in different waves of modernization from the late 19th century until the present and that this was and is no one way traffic. The book examines to what extent pre-classical thinking in the West, in particular French Physiocracy in mid 18th century, was influenced by China as an ideal and a source of ideas at a time when China was the largest and most advanced economy in the world. It discusses to what extent different approaches of modern Western style economics, in particular in the fields of development economics and institutional economics, can be used to understand the rapid transitions and developments of the Chinese economy in recent decades and to what extent they need to be modified in the light of new experiences and insights. Against this background, several contributions to the volume provide assessments of the current state of economic science and teaching in China, in particular with regard to Chinese views on Western economics. The book should be of interest to those who are interested in the economic history of China.

The Science of Economic Development and Growth: The Theory of Factor Proportions

C.C. Onyemelukwe, 2016-07-08 A theoretical framework aiming to facilitate study of development economics. The New Horizon of China's Economic Law Theory Shouwen Zhang, 2020-10-26 This book presents the development and reformation of economic law in China and explores the three relationships between the government and market, between reform and rule of law, and between the constitution and economic law. On this basis, it subsequently focuses on development theory, distribution theory, risk theory, and crisis theory. Further, it addresses effective development, fair distribution, and prevention and resolution of related risks and crises, which are important functions of economic law. In order to achieve the above functions and objectives, the book argues we must vigorously promote the integration of rule of law in economic law and constantly refine the theory of economic rule of law employed in China. The book demonstrates that no matter how the three major relationships are adjusted or the relevant systems are reformed, i.e. regarding the implementation of the concept of coordinated development or the optimization of economic structures, the solution of distribution problems or the improvement of distribution systems, the prevention of risks or the response to crises, any such changes depend on economic rule of law. The above mentioned theoretical discussion presents a new horizon of contemporary Chinese economic law theory, which will be of great value to
