## **Fine Marble In Architecture Studio Marmo:**

**Fine Marble In Architechture** Frederick Bradley, Studio Marmo, 2001-05 Marble has always been the most elegant and beautiful structural material. Its near immortal endurance led to its use in religious and monumental works in ancient times. It is still prized for its strength as well as its infinitely decorative character. This book traces the history of its use and provides valuable information on the characteristics of various premium marbles, their esthetic features and defects, physical mechanical characteristics and how they are commonly worked and used. Aimed at bridging the gap between designers not necessarily expert in the marble industry and suppliers/producers, the book explains the terminology and classification of marble and provides information on the availability and sources of materials. **BOOK JACKET Title Summary** field provided by Blackwell North America Inc. **Stone Conservation: Principles and Practice** Alison Henry, 2015-12-08 Winner of the RIBA Book Award, this important and timely publication brings together contributions from leading stone conservation practitioners. It discusses the philosophical principles on which stone conservation is founded and the need to understand the full history and development of a building before starting work. Other topics covered in this book include consolidation, cleaning and the replacement of stone, conservation of different stone types including limestone, sandstone and marble, problems of dealing with polychrome stone and finally issues relating to church monuments and graveyards, taking account of the need for good maintenance and health and safety requirements. The book is illustrated with the authors' own examples of stone conservation in practice. Architects, surveyors and craftsmen involved in the conservation of stone structures will find this both a practical and useful reference work. **Materials for Architects and Builders** Arthur R. Lyons, 2007 *Materials for Architects and Builders* provides an introduction to a wide range of building materials. It explains in detail the manufacture, key physical properties, specification and uses of the standard building products everything a student would need to know. The book also describes many recent technological innovations and rediscovered materials reflecting an increased concern for environmental issues within the industry. This new edition has been completely updated to reflect the amended Building Regulations, the latest British and European Standards as well as incorporating current advice and information from the Building Research Establishment. Dr Arthur Lyons is a teacher fellow and principal lecturer in building materials at the Leicester School of Architecture within the Faculty of Art and Design at De Montfort University, UK. He has taught the subject of building materials for thirty-five years to a wide range of students within the built environment disciplines. The text covers the widest range of materials from standard products to ecofriendly materials and components. Up to date with respect to the latest Building Regulations and European/British Standards. Well illustrated with many colour images showing typical use of the materials in high quality construction. **American Book Publishing Record**, 2001 *Material Stone* Christoph Mäckler, 2004 In recent years building with stone has gained new significance not only because of its impressive appearance but also in the debate that has arisen in architecture between the monumental
