Formulating Poorly Water Soluble Drugs Robert O. Williams III, Alan B. Watts, Dave A. Miller, 2011-12-04 This volume is intended to provide the reader with a breadth of understanding regarding the many challenges faced with the formulation of poorly water soluble drugs as well as in depth knowledge in the critical areas of development with these compounds Further this book is designed to provide practical guidance for overcoming formulation challenges toward the end goal of improving drug therapies with poorly water soluble drugs Enhancing solubility via formulation intervention is a unique opportunity in which formulation scientists can enable drug therapies by creating viable medicines from seemingly undeliverable molecules With the ever increasing number of poorly water soluble compounds entering development the role of the formulation scientist is growing in importance Also knowledge of the advanced analytical formulation and process technologies as well as specific regulatory considerations related to the formulation of these compounds is increasing in value Ideally this book will serve as a useful tool in the education of current and future generations of scientists and in this context contribute toward providing patients with new and better medicines

Advanced Coal Preparation and Beyond S. Komar Kawatra, 2020-01-27 Updating content from the author's 2001 book *Coal Desulfurization* this new title focuses on CO₂ sequestration and utilization It includes information on the theory and practical approaches to CO₂ capture and recent advances in the use of sequestered CO₂ Avoiding these pollutants requires either forgetting about the 250 billion tons of coal reserves the United States possesses or capturing and utilizing the pollutants in a profitable and environmentally responsible fashion The book covers postcombustion and precombustion capture approaches for coal and postcombustion capture can be generalized to many other fuels Recent practical implementations at full scale power facilities around the world are discussed The book covers sequestering CO₂ via underground oceanic biological and other long term CO₂ storage methods It also includes recent advances in utilizing CO₂ for enhanced oil recovery advances in storage with depleted oil and gas reservoirs and deep saline aquifers and additional topics The book also examines specific applications of pure CO₂ and covers chemical conversion of CO₂ to useful compounds It answers questions like Can we create methanol from coal or Can we create ethanol from coal It is found that methanol and ethanol cannot be sustainably produced from coal power alone However oxalic acid can be created at a much lower energy cost than methanol or ethanol Oxalic acid can be used to extract rare earths which are not currently produced anywhere in the United States but are typically concentrated in coal ash Aimed at researchers and industry professionals in chemical environmental and energy engineering this book provides insight and inspiration into capturing CO₂ not merely as a response to regulatory pressure and climate change but as an inherently profitable and valuable venture

Surface Chemistry of Froth Flotation Jan Leja, 2012-12-06 The process of froth flotation is an outstanding example of applied surface chemistry It is extensively used in the mining mineral metallurgical and chemical industries for separation and selective concentration of individual minerals and other solids Substances so concentrated serve as raw materials for producing appropriate metals and chemicals The importance of flotation in technology is chiefly due to the ease with which it can be made selective and versatile and to the economy of the process The objective of this book is to review the fundamentals of surface chemistry together with the relevant aspects of organic and inorganic chemistry that in the opinion of the author are important control of the froth flotation process The review updates the information that had been available in books by Sutherland and Wark 1955 Gaudin 1957 Klassen and Mokrousov 1963 and Glembotsky et al 1963 It emphasizes mainly the surface chemical aspects of the process leaving other relevant topics such as hydrodynamics mechanical and electrical technology circuit design and engineering operations research instrumentation technology modeling etc to appropriate specialized treatments
