Gill, 2012-12-06 There is now a serious discussion taking place about the moment at which human beings will be surpassed and replaced by the machine On the one hand we are designing machines which embed more and more human intelligence but at the same time we are in danger of becoming more and more like machines In these circumstances we all need to consider What can we do What should we do What are the alternatives of doing it This book is about the human centred alternative of designing systems and technologies This alternative is rooted in the European tradition of human centredness which emphasises the symbiosis of human capabilities and machine capacity The human centred tradition celebrates the diversity of human skill and ingenuity and provides an alternative to the mechanistic paradigm of one best way the sameness of science and the dream of the exact language This alternative vision has its origin in the founding European human centred movements of the 1970s These include the British movement of Socially Useful Technology the Scandinavian movement of Democratic Participation and the German movement of Humanisation of Work and Technology The present volume brings together various strands of human centred systems philosophy which span the conceptual richness and cultural diversity of the human centred movements The core ideas of human centredness include human machine symbiosis the tacit dimension of knowledge the system as a tool rather than a machine dialogue participation social shaping and usability Human-Centered Software Engineering Marco Winckler, Peter Forbrig, Regina Bernhaupt, 2012-09-22 This book constitutes the refereed proceedings of the 4th International Conference on Human Centered Software Engineering HCSE 2012 held in Toulouse France in October 2012 The twelve full papers and fourteen short papers presented were carefully reviewed and selected from various submissions The papers cover the following topics user interface design examining the relationship between software engineering and human computer interaction and on how to strengthen user centered design as an essential part of software engineering process *Human-Centered Software Engineering* Stefan Sauer, Cristian Bogdan, Peter Forbrig, Regina Bernhaupt, Marco Winckler, 2014-08-25 This book constitutes the refereed proceedings of the 5th IFIP WG 13.2 International Conference on Human Centered Software Engineering HCSE 2014 held in Paderborn Germany in September 2014 The 13 full papers and 10 short papers presented together with one keynote were carefully reviewed and selected from 35 submissions The papers cover various topics such as integration of software engineering and user centered design HCI models and model driven engineering incorporating guidelines and principles for designing usable products in the development process usability engineering methods for user interface design patterns in HCI and HCSE software architectures for user interfaces user interfaces for special environments representations for design in the development process working with iterative and agile process models in HCSE social and organizational aspects in the software development lifecycle human centric software development tools user profiles and mental models
