External Relations Dept., 1988-03-01 This paper examines the policy implications of structural changes in financial markets Domestic financial markets have become less segmented and the major financial centers more integrated At the same time the structural changes in financial markets have improved efficiency by lowering intermediation costs increasing the ability to hedge financial risks associated with currency interest rate and price volatility and opening up access to new sources of savings The widespread application of computer and telecommunications technology to financial markets has permitted markets to process a significantly larger volume of transactions

The Implications of Fund Supported Adjustment Programs for Poverty International Monetary Fund, 1988-05-05 This paper presents a study that focuses on specific adjustment programs for limited periods and is aimed largely at analyzing the short run implications of the policy measures The longer run implications are also discussed whenever relevant since much of the rationale for policies and many of the beneficial effects on the poor are likely to be realized over time The study also notes any compensatory targeting measures oriented to the poor together with their implications for the adjustment efforts and the political viability of the programs These analyses may provide lessons for improving the design of future adjustment programs The chapter also summarizes the sample countries and programs and describes the methodology used in the study The results of the study suggest that adjustment programs in general have important distributional implications During the process of adjustment it is inevitable that some social groups gain while others lose particularly when adjustment is aimed at a shift in sectoral resource allocation
