## **Economy An Interpretive Introduction:**

**The Economy** C. T. Kurien, 1992      **Information Technology Diffusion in the Asia Pacific** Felix B. Tan, P. Scott Corbett, Yuk-Yong Wong, 1999-01-01 According to a recent United Nations report the increase in power and functionality of IT coupled with decreasing prices have contributed to rapid IT adoption and use in both developed countries and newly industrialised nations of the Asia Pacific Information Technology Diffusion in the Asia Pacific Perspectives on Policy Electronic Commerce and Education provides essential reading on IT diffusion in leading countries of the Asia Pacific By focusing on some of the different applications and implications of IT in these nations contributions in this book deal with aspects of IT applications in the Asia Pacific countries and ways that information technology can assist nations in dealing with technological and electronic growth and risks involved      **Economics, Natural-Resource Scarcity and Development (Routledge Revivals)** Edward B Barbier, 2013-06-26 Global warming is an increasing problem tropical forests are being wiped out and major upper watersheds are being degraded Using insights provided by environmentalism ecology and thermodynamics this book first published in 1989 outlines an economic approach to the use of natural resources and particularly to the problem of environmental degradation Edward Barbier reviews and critiques the long past of environmental and resource economics and then goes on to elaborate an economics which allows us to develop alternative strategies for dealing with the problems faced With examples drawn from Latin America and Indonesia he not only develops a major theoretical advance but shows how it can be applied Barbier's work is an important and relevant contribution to the discussion surrounding the economics of environmental sustainability      **The Labor of Development** Patrick Heller, 2018-10-18 The state of Kerala in southern India is notable for the ways in which lower class mobilization and state intervention have combined to create one of the most successful cases of social and redistributive development in the Third World In contrast to predictions that labor militancy in developing countries threatens to overload fledgling democratic institutions and derail economic growth The Labor of Development shows that the political and economic inclusion of industrial and agricultural workers in Kerala set the stage for a democratically negotiated capitalist transformation When compared to the other Indian states Kerala's departure from the national pattern is tied to its history of social movements and highlights the significance of understanding sub national patterns of democratic consolidation and state building The case of Kerala provides important theoretical insights into the circumstances under which the expansion of political and social citizenship can become the basis for managing economic change Using examples from agriculture industry and the informal sector Patrick Heller examines the institutional and political dynamics through which the demands of organized labor and the imperatives of capitalist growth have evolved from a period of open conflict and stagnation to one of class compromise He also demonstrates that the Kerala model has broad ramifications for understanding the relationship between substantive democracy and market economies in low income countries      *Cooperation, Technology, And Japanese Development* Donna L Doane, 2018-02-19 This book discusses a

detailed study of the evolution and recent forms of cooperative technological ties in Japan It explores the use of cooperative ties for technological advance during the period of technological catch up specifically within a late development context

**The Economics of Sustainability** John C.V. Pezzey, Michael A. Toman, 2017-09-08 Before the late 1980s when the ideas of sustainability and sustainable development to the forefront of public debate conventional neo classical economic thinking about development and growth had rarely given any consideration to the needs of future generations or the sustainability of natural resource use Defining sustainability broadly as intergenerational fairness in the long term decision making of a whole society and using established economic concepts this selection of refereed journal articles brings a famously ill defined concept into sharp focus providing academics at all levels with a formidable research tool Spanning thirty years of the most important philosophical theoretical and empirical contributions from both critics and defenders of neo classical assumptions and methods of economic analysis this focused collection of papers constitutes a unique balanced resource on the full range of intellectual debates surrounding the economics of sustainability

**The Politics of Making Kinship** Erdmute Alber, David Warren Sabean, Simon Teuscher, Tatjana Thelen, 2022-12-09 The long tradition of Western political thought included kinship in models of public order but the social sciences excised it from theories of the state public sphere and democratic order Kinship has however neither completely disappeared from the political cultures of the West nor played the determining social and political role ascribed to it elsewhere Exploring the issues that arise once the divide between kinship and politics is no longer taken for granted The Politics of Making Kinship demonstrates how political processes have shaped concepts of kinship over time and conversely how political projects have been shaped by specific understandings idioms and uses of kinship Taking vantage points from the post Roman era to early modernity and from colonial imperialism to the fall of the Berlin Wall and beyond this international set of scholars place kinship centerstage and reintegrate it with political theory

**Agency and Causal Explanation in Economics** Peter Róna, László Zsolnai, 2019-11-07 This open access book provides an exploration of the consequences of the ontological differences between natural and social objects sometimes described as objects of nature and objects of thought in the workings of causal and agency relationships One of its important and possibly original conclusions is that causal and agency relationships do not encompass all of the dependent relationships encountered in social life The idea that social reality is contingent has been known and largely undisputed at least since Wittgenstein's On Certainty but social science and most notably economics has continued to operate on the basis of causal and agency theories

borrowed or adapted from the natural sciences This volume contains essays that retain and justify the partial or qualified use of this approach and essays that totally reject any use of causal and agency theory built on determined facts closed systems The rejection is based on the possibly original claim that whereas causation in the objects of the natural sciences reside in their properties human action is a matter of intentionality It engages with critical realist theory and re examines the role of free will in theories of human action in general and economic theory in particular *Economic Growth and Resources*
