Methods in Ecosystem Science Osvaldo E. Sala,Robert B. Jackson,Harold A. Mooney,Robert W. Howarth,2013-12-01 Ecology at the ecosystem level has both necessitated and benefited from new methods and technologies as well as those adapted from other disciplines With the ascendancy of ecosystem science and management the need has arisen for a comprehensive treatment of techniques used in this rapidly growing field Methods in Ecosystem Science answers that need by synthesizing the advantages disadvantages and tradeoffs associated with the most commonly used techniques in both aquatic and terrestrial research The book is divided into sections addressing carbon and energy dynamics nutrient and water dynamics manipulative ecosystem experiments and tools to synthesize our understanding of ecosystems Detailed information about various methods will help researchers choose the most appropriate methods for their particular studies Prominent scientists discuss how tools from a variety of disciplines can be used in ecosystem science at different scales

Enclosed Experimental Ecosystems and Scale John E. Petersen,Victor S. Kennedy,William C. Dennison,W. Michael Kemp,2010-01-23 Enclosed ecosystem experiments have gained in popularity as research tools in ecological science particularly in the study of coastal aquatic environments These systems provide scientists with a degree of experimental control that is not achievable through field experiments Yet to date techniques for systematically extrapolating results from small scale experimental ecosystems to larger deeper more open more biologically diverse and more heterogeneous ecosystems in nature have not been well developed Likewise researchers

have lacked methods for comparing and extrapolating information among natural ecosystems that differ in scale Enclosed Experimental Ecosystems and Scale Tools for Understanding and Managing Coastal Ecosystems provides scientists managers and policy makers with an introduction to what has been termed the problem of scale and presents information that will allow for improved design and interpretation of enclosed experimental aquatic ecosystems The book integrates the results of a 10 year research project involving a multi disciplinary team of scientists and students to explore scale related questions in a variety of coastal habitats Anticipating use as a reference the book has been designed so that individual sections and individual pages can function as stand alone units Fundamentals of Ecosystem Science Kathleen C. Weathers,David L. Strayer,Gene E. Likens,2021-07-26 Fundamentals of Ecosystem Science Second Edition provides a comprehensive introduction to modern ecosystem science covering land freshwater and marine ecosystems Featuring full color images to support learning and written by a group of experts this updated edition covers major concepts of ecosystem science biogeochemistry and energetics Case studies of important environmental problems offer personal insights into how adopting an ecosystem approach has helped solve important intellectual and practical problems For those choosing to use the book in a classroom environment or who want to enrich further their reading experience teaching and learning assets are available at Elsevier com Covers both aquatic freshwater and marine and terrestrial ecosystems with updated information Includes a new chapter on microbial biogeochemistry Features vignettes throughout the book with real examples of how an ecosystem approach has led to important change in policy management and ecological understanding Demonstrates the application of an ecosystem approach in synthesis chapters and case studies Contains new coverage of human environment interactions

Successes, Limitations, and Frontiers in Ecosystem Science Michael L. Pace,Peter M. Groffman,2013-12-01

Research on the ecosystems has emerged in recent decades as a vital successful and sometimes controversial approach to environmental science Ecosystem science has addressed issues such as human alteration of biogeochemical cycles ecological complexity and biodiversity and ecological response to climate change As a central and integrating science ecosystem level studies have been highly successful This book emphasizes the idea that much of the progress in ecosystem research has been driven by the emergence of new environmental problems that could not be addressed by existing approaches By focusing on successes limitations and frontiers in ecosystem studies it will be welcomed by students and scientists throughout the ecological and environmental communities **Ecosystem Ecology** Sven Erik Jørgensen,2009-07-25 Jorgensen s Ecosystem Ecology provides a thorough and comprehensive overview of the world s aquatic and terrestrial ecosystems This derivative volume based on the best selling Encyclopedia of Ecology published 2008 is the only book currently published that provides an overview of the world s ecosystems in a concise format Provides an overview of the world s ecosystems in a concise format Covers aquatic and terrestrial ecosystems Based on the best selling Encyclopedia of Ecology Full color figures and tables support the text and aid in understanding **Ecology of Marine Bivalves** Richard F. Dame,2016-04-19 Exploring the

potential use of bivalves as indicators and monitors of ecosystem health this book describes live and computer simulated experiments mesocosm studies and field manipulation experiments This second edition discusses major new developments including phase shifts in many coastal and estuarine ecosystems dominated by suspension feeding bivalves the invasion or introduction of alien bivalve species the rapid growth of environmental restoration focused on bivalves and the examination of geological history with regard to global climate change and its impact on bivalve dominated systems *Scaling Relations in Experimental Ecology* Robert H. Gardner,W. Michael. Kemp,Victor S. Kennedy,John E. Petersen,2012-08-14 Ecology

Scaling and Uncertainty Analysis in Ecology Jianguo Wu,K. Bruce Jones,Harbin Li,Orie L. Loucks,2006-07-02

Primarily the book draws together a series of important case studies to provide a comprehensive review and synthesis of the most recent concepts theories and methods in scaling and uncertainty analysis It compares current definitions and ideas concerning scale within a coherent framework and examines two key scaling approaches similarity based scaling which is rooted in the idea of similitude or self similarity and dynamic model based scaling which emphasizes processes and mechanisms With case studies focusing on issues ranging from population to ecosystem processes from biodiversity to landscape patterns and from basic research to multidisciplinary management and policy making the book will appeal to both researchers and practitioners working on landscape issues It will also provide a valuable resource for graduate students and professional trainees in ecology environmental policy resource management and global change science **Carbon Dioxide and Terrestrial Ecosystems**

George W. Koch,Jacques Roy,1995-12-21 The importance of carbon dioxide extends from cellular to global levels of organization and potential ecological deterioration may be the result of increased CO₂ in our atmosphere Recently the research emphasis shifted from studies of photosynthesis pathways and plant growth to ground breaking studies of carbon dioxide balances in ecosystems regions and even the entire globe Carbon Dioxide and Terrestrial Ecosystems addresses these new areas of research Economically important woody ecosystems are emphasized because they have substantial influence on global carbon dioxide balances Herbaceous ecosystems e g grasslands prairies wetlands and crop ecosystems are also covered The interactions among organisms communities and ecosystems are modeled and the book closes with an important synthesis of this growing nexus of research Carbon Dioxide and Terrestrial Ecosystems is a compilation of detailed scientific studies that reveal how ecosystems generally and particular plants specifically respond to changed levels of carbon dioxide Contributions from an international team of experts Empirical examination of the actual effects of carbon dioxide Variety of terrestrial habitats investigated Specific plants and whole ecosystems offered as studies

Ecosystems: Oceans Trevor Day,2014-07-10 The oceans are teeming with life of all kinds Changing sea levels plate tectonics chemical cycling sedimentation and the atmosphere greatly impact these habitats The ocean s currents and sea level are tied closely to weather patterns and in turn to such issues as global warming and El Nino Oceans provides a complete overview of the ecosystem that exists in these bodies of water From the coastal wetlands to the deep ocean waters

the geography geology chemistry and physics of oceans are thoroughly examined in this volume Today the impact that human use of ocean resources has on these habitats including habitat loss and overharvesting is in constant debate Oceans looks at these possible threats and concludes with a balanced look at the ways to manage the oceans as well as the future of this ecosystem

Tropical Forest Ecosystem Responses to Increasing Nutrient Availability Jürgen Homeier, Selene Báez, Dietrich Hertel, Christoph Leuschner, 2017-09-08 Deforestation and land use change have led to a strong reduction of tropical forest cover during the last decades Climate change will amplify the pressure to the remaining refuges in the next years In addition tropical regions are facing increasing atmospheric inputs of nutrients which will have unknown consequences for the structure and functioning of these systems no matter if they are within protected areas or not Even remote areas are expected to receive rising amounts of nutrients The effects of higher rates of atmospheric nutrient deposition on the biological diversity and ecosystem functioning of tropical ecosystems are poorly understood and our knowledge of nutrient fluxes and nutrient limitation in tropical forest ecosystems is still limited Yet it will be of paramount importance to know the effects of increased nutrient availability to conserve these ecosystems with their biological and functional diversity During the last years research efforts have more and more focused on the understanding of the role of nutrients in tropical ecosystems and several coordinated projects have been established that study the effects of experimental nutrient addition This Research Topic combines results from experiments and from observational studies with the aim to review and conclude on our current knowledge on the role of additional nutrients in ecosystems

Future Sustainable Ecosystems Nathaniel K Newlands, 2016-10-03 Future Sustainable Ecosystems Complexity Risk Uncertainty provides an interdisciplinary integrative overview of environmental problem solving using statistics It shows how statistics can be used to solve diverse environmental and socio economic problems involving food water energy scarcity and climate change risks It synthesizes interdisciplinary theory concepts definitions models and findings involved in complex global sustainability problem solving making it an essential guide and reference It includes real world examples and applications making the book accessible to a broader interdisciplinary readership Discussions include a broad integrated perspective on sustainability integrated risk multi scale changes and impacts taking place within ecosystems worldwide State of the art statistical techniques including Bayesian hierarchical spatio temporal agent based and game theoretic approaches are explored The author then focuses on the real world integration of observational and experimental data and its use within statistical models

Enclosed Experimental Marine Ecosystems: A Review and Recommendations Carol M. Lalli, 2012-12-06 The application of mesocosms defined in this report as artificial 3 3 experimental enclosures ranging in size from 1 m to 10m to address various problems in the marine sciences has been a relatively recent development The application of the technology was dictated by the realization that many important ocean processes and interactions cannot be fully understood from observations in the natural environment or in smaller enclosures Such studies involve for example

determining the interactions between and energy transfer from one trophic level to another the biogeochemical cycling of elements and compounds etc These and similar interactions and rate processes cannot normally be established in situations nature where the detection and quantification of rate processes are confused by advection and or the inability to study the same populations over time In the case of microcosms mixed populations of primary producers consumers and carnivores cannot be maintained in balance for a sufficient length of time to determine normal interactions between the various components of these trophic levels This report prepared by SCOR Working Group 85 critically examines past applications of mesocosms to ocean research though there is no attempt to comprehensively review all literature relevant to the subject Further the report outlines some important advances emanating from their use and provides recommendations for future applications It constitutes the first of two reports from the Working Group see Introduction *Real World Ecology* ShiLi Miao,Susan Carstenn,Martha Nungesser,2008-11-20 Ecological and environmental research has increased in scope and complexity in the last few decades from simple systems with a few managed variables to complex ecosystems with many uncontrolled variables These issues encompass problems that are inadequately addressed using the types of carefully controlled experiments that dominate past ecological research Contemporary challenges facing ecologists include whole ecosystem responses to planned restoration activities and ecosystem modifications as well as unplanned catastrophic events such as biological invasions natural disasters and global climate changes Major perturbations implicated in large scale ecological alterations share important characteristics that challenge traditional experimental design and statistical analyses These include Lack of randomization replication and independence Multiple scales of spatial and temporal variability Complex interactions and system feedbacks In real world ecology standard replicated designs are often neither practical nor feasible for large scale experiments yet ecologists continue to cling to these same standard designs and related statistical analyses Case studies that fully elucidate the currently available techniques for conducting large scale unreplicated analyses are lacking *Real World Ecology Large Scale and Long Term Case Studies and Methods* is the first to focus on case studies to demonstrate how ecologists can investigate complex contemporary problems using new and powerful experimental approaches This collection of case studies showcases innovative experimental designs analytical options and interpretation possibilities currently available to theoretical and applied ecologists practitioners and biostatisticians By illustrating how scientists have answered pressing questions about ecosystem restoration impact and recovery global warming conservation modeling and biological invasions this book will broaden the acceptance and application of modern approaches by scientists and encourage further methodological development *Wetland Ecosystems* William J. Mitsch,James G. Gosselink,Li Zhang,Christopher J. Anderson,2009-04-13 New focused text introduces readers to wetland ecosystems and systems approaches to studying wetlands With its comprehensive coverage of wetland science management and restoration Mitsch and Gosselink s *Wetlands* has been the premier reference on wetlands for more than two decades Now the coverage of

specific wetland ecosystem types from earlier editions of this acclaimed work has been updated revised and supplemented with additional content in order to create this new text focusing exclusively on wetland ecosystems This book now complements Wetlands Fourth Edition Following an introduction to ecosystems in general and wetland ecosystems in particular Wetland Ecosystems examines the major types of wetlands found throughout the world coastal wetlands freshwater marshes and forested swamps and peatlands The final chapter reviews three fundamental systems approaches to studying wetlands mesocosms full scale experimental ecosystems and mathematical modeling This new text features Updated descriptions of the hydrology biogeochemistry and biology of the main types of wetlands found in the world New content introducing general ecosystems wetland ecosystems whole ecosystem and mesocosm experiments with wetlands and systems ecology and modeling A detailed description of the ecosystem services provided by wetlands A broad international scope including many examples of wetlands located outside North America Two new coauthors offering new perspectives and additional insights into the latest ecosystem and modeling techniques An abundance of illustrations helps readers understand how different biological communities and the abiotic environment in wetland ecosystems interact and function Tables and text boxes provide at a glance summaries of key information Lastly each chapter concludes with a list of recommended readings This text has been designed as an introduction for students and professionals in wetland ecology and management general ecology environmental science and natural resource management
