Ecosystems And Human Wellbeing Scenarios:

Ecosystems and Human Well-Being Neville Ash, 2010-04-05 The Millennium Ecosystem Assessment MA is the most extensive study ever of the linkages between the world's ecosystems and human well-being. It is one of the most important conservation initiatives ever undertaken and the ecosystem services paradigm on which it is based provides the standard for practice. This manual supplies the specific tools that practitioners of the paradigm need in order to extend their work into the future. The manual is a stand-alone how-to guide to conducting assessments of the impacts on humans of ecosystem changes. It builds on the experiences and lessons learned from the MA global and sub-global assessment initiatives with chapters written by well-known participants in those initiatives. It also includes insights gained from service-focused assessment activities since the completion of the MA in 2005.

Biodiversity, Ecosystem Functioning, and Human Wellbeing Shahid Naeem, Daniel E. Bunker, Andy Hector, Michel Loreau, Charles Perrings, 2009-07-30 How will biodiversity loss affect ecosystem functioning, ecosystem services, and human well-being? In an age of accelerating biodiversity loss, this timely and critical volume summarizes recent advances in biodiversity, ecosystem functioning research and explores the economics of biodiversity and ecosystem services. The book starts by summarizing the development of the basic science and provides a meta-analysis that quantitatively tests several biodiversity and ecosystem functioning hypotheses. It then describes the natural science foundations of biodiversity and ecosystem functioning research, including quantifying functional diversity, the development of the field into a predictive science, the effects of stability and complexity, methods to quantify mechanisms by which diversity affects functioning, the importance of trophic structure, microbial ecology, and spatial dynamics. Finally, the book takes research on biodiversity and ecosystem functioning further than it has ever gone into the human dimension, describing the most pressing environmental challenges that face humanity and the effects of diversity on climate change, mitigation, restoration of degraded habitats, managed ecosystems, pollination, disease, and biological invasions. However, what makes this volume truly unique are the chapters that consider the economic perspective. These include a synthesis of the economics of ecosystem services and biodiversity and the options open to policy makers to address the failure of markets to account for the loss of ecosystem services; an examination of the challenges of valuing ecosystem services and hence to understanding the human consequences of decisions that neglect these services; and an examination of the ways in which economists are currently incorporating biodiversity and ecosystem functioning research into decision models for the conservation and management of biodiversity. A final section describes new advances in ecoinformatics that will help transform this field into a globally predictive science and summarizes the advancements and future directions of the field. The ultimate conclusion is that biodiversity is an essential element of any strategy for sustainable development.
