Flammability has been recognized as an increasingly important social and scientific problem Fire statistics in the United States Report of the National Commission on Fire Prevention and Control America Burning 1973 emphasized the vast devastation to life and property 12 000 lives lost annually due to fire and these deaths are usually caused by inhaling smoke or toxic gases 300 000 fire injuries 11 4 billion dollars in fire cost at which 2 7 billion dollars is related to property loss a billion dollars to burn injury treatment and 3 3 billion dollars in productivity loss It is obvious that much human and economic misery can be attributed to fire situations In relation to this polymer flammability has been recognized as an increasingly

important social and scientific problem The development of flame retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation This is part of the important trend toward a safer environment and sets a pattern for future example Flame retardancy deals with our basic everyday life situations housing work areas transportation clothing and so forth the macroenvironment capsule within which homosapiens live As a result flame retardant polymers are now emerging as a specific class of materials leading to new and diversified scientific and technological ventures Fire Retardancy of Polymeric Materials Arthur F.
