mechanism that selects organisms which are well adapted to the environment to reproduce more often than those which are not. The evolutionary process takes place during the reproduction stage that includes mutation which causes the chromosomes of offspring to be different from those of the parents and recombination which combines the chromosomes of the parents to produce the offspring. Based upon these features the previously mentioned three models of evolutionary computing were independently and almost simultaneously developed. An evolutionary algorithm EA is an iterative and stochastic process that operates on a set of individuals called a population.
