Berra, 2008-09-15 With more than 29 000 species fishes are the most diverse group of vertebrates on the planet Of that
number more than 12 000 species are found in freshwater ecosystems which occupy less than 1 percent of the Earth s
surface and contain only 2 4 percent of plant and animal species But on a hectare for hectare basis freshwater ecosystems
are richer in species than more extensive terrestrial and marine habitats Examination of the distribution patterns of fishes in
these fresh waters reveals much about continental movements and climate changes and has long been critical to
biogeographical studies and research in ecology and evolution Tim Berra s seminal resource *Freshwater Fish Distribution*
