Blackford, 2018-03-31 Ranging from the Hawaiian Archipelago to the Aleutian Islands from Silicon Valley to Guam Pathways to the Present is a thoroughly researched and concisely argued account of economic and environmental change in the postwar American Pacific Following a brief survey of the history of the Pacific the author takes the Hawaiian Islands as the center of American activities in the region and looks at interactions among native Hawaiian developmental military and environmental issues in the archipelago after World War II He then turns to land and water use problems that have intersected with more nebulous quality of life concerns to generate policy

controversies in the Seattle region and the San Francisco Bay area especially Silicon Valley Economic expansion and environmentalism in Alaska are examined through the lens of changes occurring along the Aleutians From there the study considers Hiroshima after its destruction by the atomic bomb in 1945 looking at residents desire to combine urban planning concepts The author investigates the effort to remake Hiroshima as a high tech city in the 1990s an attempt inspired by the perceived success of Silicon Valley and postwar planning on Okinawa where American influences were particularly strong The final chapter takes into account issues raised on Guam regarding the growth of tourism and the use of the island for military purposes and links these to developments in the Philippines to the west and American Samoa to the south

**Making Seafood Sustainable** Mansel G. Blackford,2011-12-30 In the spring of 2007 National Geographic warned The oceans are in deep blue trouble From the northernmost reaches of the Greenland Sea to the swirl of the Antarctic Circle we are gutting our seas of fish There were legitimate grounds for concern After increasing more than fourfold between 1950 and 1994 the global wild fish catch reached a plateau and stagnated despite exponential growth in the fishing industry As numerous scientific reports showed many fish stocks around the world collapsed creating a genuine global overfishing crisis Making Seafood Sustainable analyzes the ramifications of overfishing for the United States by investigating how fishers seafood processors retailers government officials and others have worked together to respond to the crisis Historian Mansel G Blackford examines how these players took steps to make fishing in some American waters especially in Alaskan waters sustainable Critical to these efforts Blackford argues has been government and industry collaboration in formulating and enforcing regulations What can be learned from these successful experiences Are they applicable elsewhere What are the drawbacks Making Seafood Sustainable addresses these questions and suggests that sustainable seafood management can be made to work The economic and social costs incurred in achieving sustainable resource usage are significant but there are ways to mitigate them More broadly this study illustrates ways to manage commonly held natural resources around the world land water oil and so on in sustainable ways
