Flaps Decision Making In Clinical Practice:

FLAPS L. Franklyn Elliot, James H. Jr. French, James C. Grotting, McKay McKinnon, Michael H. Moses, Richard S. Stahl, Bryant A. Toth, Vincent N. Zubowicz, 2012-12-06 Flaps Decision Making in Clinical Practice is an excellent readable guide for surgeons utilizing multiple techniques in plastic and reconstructive surgery The authors have organized a pragmatic guide specifically focused on those flaps which surgeons find difficult and challenging with the latest technical developments in all anatomical areas

Flaps L. Franklin Elliott, A. Bryant Toth, Richard S. Stahl, 1995-12 This work takes a pragmatic look at regional reconstruction tapping both the personal opinions and the collective knowledge of experienced professionals Each chapter consists of an introductory text written by one author from his own experience and an ensuing round table discussion from the other members of the group The areas of controversy are thus exposed and examined from the varying perspectives and experiences represented

Making Decisions and Avoiding Complications in Skin Flaps David H. Friedman, Payam Saadat, 2012-09-24 With a large number of clinical photographs Making Decisions and Avoiding Complications in Skin Flaps is an atlas intended for the surgeon who already has a grasp of the fundamentals and mechanics of flap repair but may need additional ideas on selecting an appropriate flap for a given defect Divided into three sections the book begins with a s

Outcomes after reconstructive surgery with local muscle flaps Alexander Wyckman, 2025-02-06 Reconstructive surgery can be required as a result of complex wounds and tissue defects which can occur after various types of injuries and surgical procedures Tissue may need to be transferred to the affected area to restore form and function as much as possible which can be done in several ways Local muscle flaps have been used frequently for the reconstruction of various wounds and tissue defects historically but questions remain regarding the outcomes after the use of specific muscle flaps in the short as well as the long term perspective In this thesis different outcome perspectives are studied in patient groups who had reconstructive surgery with local muscle or musculocutaneous flaps in Linköping University Hospital due to complex wounds or tissue defects In paper I the outcomes after sternal reconstruction using a unilateral pectoralis major advancement flap following deep sternal wound infection DSWI were evaluated The results of the study show that the sternal reconstruction was successful in most cases and contributed to healing of the infection Surgical complications were however relatively common and some patients required reoperations due to complications Paper II investigated the outcomes after reconstruction of deep pressure ulcers in the pelvic area using local musculocutaneous and fasciocutaneous flaps in a patient cohort in which the majority had spinal cord injury SCI Flap viability was compared between different types of flaps and techniques The results of the study conclude that musculocutaneous and fasciocutaneous flaps have similar viability and that a certain type of flap was associated with an increased risk of flap failure In paper III long term outcomes after breast reconstruction following breast cancer using the extended latissimus dorsi myocutaneous flap were evaluated using the patient reported outcome measure PROM BREAST Q The results of the study

show a high level of long term patient satisfaction following this method of breast reconstruction which seems to increase over time Paper IV investigated long term outcomes following reconstruction of complex wounds around the foot and ankle using the extensor digitorum brevis EDB muscle flap Outcomes were assessed using both PROMs and functional measurements Overall the results of the study show that foot and ankle function does not appear to be significantly affected by the harvest of the EDB muscle flap In summary patients who have had reconstructive surgery with muscle flaps constitute a complex heterogeneous group The studies in this thesis add knowledge regarding short and long term outcomes after reconstructive surgery using specific muscle flaps which can be valuable when considering the appropriate surgical method for the individual patient
