This book is a refreshingly unique approach to genealogy and its relationships with Science and Religion It is the author's answer to the questions posed artistically by the painter Paul Gauguin's masterpiece *Where Do We Come From What Are We Made Of Where Are We Going* as reproduced on the book cover Most religions and cultures make important reference to their genealogies Science also since the advent of Darwin's Theory of Evolution and its subsequent development and culmination in DNA and brain science research has its own genealogy telling the story of the pre history and history of mankind our migrations and the evolution of our behavior and cultures The author trained as both a biologist and lawyer writing as an independent scholar examines these questions through the various lenses of genealogy biology evidence religion and philosophy He considers first some basic but little known facts of genealogy then our common mortality and heritage and brother sisterhood with all mankind then the variety of world views then the different evidentiary bases for science and religion then a condensed but comprehensive view of comparative religion and humanism then the history of Biblical interpretation and Biblical genealogies and finally the history of mankind as seen by science including the remarkable recent discoveries of prehistoric man and brain science The poetry prose metaphor is illustrated by insightful examples of both poetry and prose and brief introductions to some remarkable religious and scientific personalities The dark side of religion is explored with contemporary critiques by renowned scholars and some exemplary poets are referred to with examples of their poetry This book avoids the combative rhetoric of both religious and scientific extremists and points the way toward and enriching language and life of religious humanism This new dualism of poetry and prose reflects the biological facts of our simultaneously emotional and rational selves Thus religious humanism provides a natural bridge between religion and science accessible to everyone The poetry prose metaphor can provide a thoughtful rationale for people to keep their religious beliefs and traditions make peace between religions and also understand and appreciate the modern scientific world without conflict Thus genealogy has taken us on a long journey through the history of science and religion illustrating the mysteries complexities and beauties of humanity's existence The book is well researched and written clearly in an engaging style with an extensive bibliography It will be well worth reading by all people who have an interest in

genealogy and its relationships with science and religion Small Creatures and Ordinary Places Allen M.

Young, 2000-11-07 Small Creatures and Ordinary Places reveals to us the beauty and value of hornets bats katydids mice cicadas and other tiny dwellers in our own backyards Young a renowned expert on butterflies and cicadas of the American tropics records in these charming essays his keen observations of the natural world as he walks through an urban woods near the Lake Michigan shore or sits on his deck facing his backyard or gazes at a field of corn stubble in autumn He invites us to venture into our own yards neighborhood parks fields and forests and pause there to look and to listen Small creatures have unique and interesting stories to tell us Young points out Their brief life cycles illustrate the intricate workings of a bigger clock driving the seasons and they dominate the larger web of life in which humans are but a strand Far too often they are ignored taken for granted reviled or misunderstood Even now Young writes as we move into a new millennium as a species and the technological pace of our existence further quickens we can gain much from appreciating nature close at hand despite how steadily it is being pushed aside
