Einführung In Die Höhere Mathematik 2vol:

A History of Mathematical Notations Florian Cajori, 2013-09-26 This classic study notes the origin of a mathematical symbol the competition it encountered its spread among writers in different countries its rise to popularity and its eventual decline or ultimate survival 1929 edition **Algebraic Geometry between Tradition and Future** Gilberto Bini, 2023-05-05 An incredible season for algebraic geometry flourished in Italy between 1860 when Luigi Cremona was assigned the chair of Geometria Superiore in Bologna and 1959 when Francesco Severi published the last volume of the treatise on algebraic systems over a surface and an algebraic variety This century long season has had a prominent influence on the evolution of complex algebraic geometry both at the national and international levels and still inspires modern research in the area Algebraic geometry in Italy between tradition and future is a collection of contributions aiming at presenting some of these powerful ideas and their connection to contemporary and if possible future developments such as Cremonian transformations birational classification of high dimensional varieties starting from Gino Fano the life and works of Guido Castelnuovo Francesco Severi's mathematical library etc The presentation is enriched by the viewpoint of various researchers of the history of mathematics who describe the cultural milieu and tell about the bios of some of the most famous mathematicians of those times Infinite Sequences and Series Konrad Knopp, 2012-09-14 Careful presentation of fundamentals of the theory by one of the finest modern expositors of higher mathematics Covers functions of real and complex variables arbitrary and null sequences convergence and divergence Cauchy's limit theorem more **On the Resonance Concept in Systems of Linear and Nonlinear Ordinary Differential Equations** Rahmi Ibrahim Ibrahim Abdel Karim, 1965 **A History of Mathematical Notations** Florian Cajori, 1929 The Numerical Treatment of Differential Equations Lothar Collatz, 2013-06-29 VI methods are however immediately applicable also to non linear problems though clearly heavier computation is only to be expected nevertheless it is my belief that there will be a great increase in the importance of non linear problems in the future As yet the numerical treatment of differential equations has been investigated far too little both in theoretical and practical respects and approximate methods need to be tried out to a far greater extent than hitherto hitherto this is especially true of partial differential equations and non linear problems An aspect of the numerical solution of differential equations which has suffered more than most from the lack of adequate investigation is error estimation The derivation of simple and at the same time sufficiently sharp error estimates will be one of the most pressing problems of the future I have therefore indicated in many places the rudiments of an error estimate however unsatisfactory in the hope of stimulating further research Indeed in this respect the book can only be regarded as an introduction Many readers would perhaps have welcomed assessments of the individual methods At some points where well tried methods are dealt with I have made critical comparisons between them but in general I have avoided passing

judgement for this requires greater experience of computing than is at my disposal Didactics of Mathematics as a Scientific Discipline Rolf Biehler, Roland W. Scholz, Rudolf Sträßer, Bernard Winkelmann, 2006-04-11 Didactics of Mathematics as a Scientific Discipline describes the state of the art in a new branch of science Starting from a general perspective on the didactics of mathematics the 30 original contributions to the book drawn from 10 different countries go on to identify certain subdisciplines and suggest an overall structure or topology of the field The book is divided into eight sections 1 Preparing Mathematics for Students 2 Teacher Education and Research on Teaching 3 Interaction in the Classroom 4 Technology and Mathematics Education 5 Psychology of Mathematical Thinking 6 Differential Didactics 7 History and Epistemology of Mathematics and Mathematics Education 8 Cultural Framing of Teaching and Learning Mathematics Didactics of Mathematics as a Scientific Discipline is required reading for all researchers into the didactics of mathematics and contains surveys and a variety of stimulating reflections which make it extremely useful for mathematics educators and teacher trainers interested in the theory of their practice Future and practising teachers of mathematics will find much to interest them in relation to their daily work especially as it relates to the teaching of different age groups and ability ranges The book is also recommended to researchers in neighbouring disciplines such as mathematics itself general education educational psychology and cognitive science Zeitschrift für Angewandte Mathematik und Mechanik. Handbook of Mathematics I.N. Bronshtein, K.A. Semendyayev, Gerhard Musiol, Heiner Mühlig, 2015-03-19 This guide book to mathematics contains in handbook form the fundamental working knowledge of mathematics which is needed as an everyday guide for working scientists and engineers as well as for students Easy to understand and convenient to use this guide book gives concisely the information necessary to evaluate most problems which occur in concrete applications In the newer editions emphasis was laid on those fields of mathematics that became more important for the formulation and modeling of technical and natural processes namely Numerical Mathematics Probability Theory and Statistics as well as Information Processing Besides many enhancements and new paragraphs new sections on Geometric and Coordinate Transformations Quaternions and Applications and Lie Groups and Lie Algebras were added for the sixth edition *NASA Technical Translation*, 1965 Fundamentals of Mathematics Heinrich Behnke, F. Bachmann, K. Fladt, 1974 Volume II of a unique survey of the whole field of pure mathematics **Two Applications of Logic to Mathematics** Gaisi Takeuti, 2015-03-08 Using set theory in the first part of his book and proof theory in the second Gaisi Takeuti gives us two examples of how mathematical logic can be used to obtain results previously derived in less elegant fashion by other mathematical techniques especially analysis In Part One he applies Scott Solovay's Boolean valued models of set theory to analysis by means of complete Boolean algebras of projections In Part Two he develops classical analysis including complex analysis in Peano's arithmetic showing that any arithmetical theorem proved in analytic number theory is a theorem in Peano

s arithmetic In doing so the author applies Gentzen's cut elimination theorem Although the results of Part One may be regarded as straightforward consequences of the spectral theorem in function analysis the use of Boolean valued models makes explicit and precise analogies used by analysts to lift results from ordinary analysis to operators on a Hilbert space Essentially expository in nature Part Two yields a general method for showing that analytic proofs of theorems in number theory can be replaced by elementary proofs Originally published in 1978 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
