Veatch, Lainie F. Ross, 2016-11-03 New technologies and medical treatments have complicated questions such as how to determine the moment when someone has died The result is a failure to establish consensus on the definition of death and the criteria by which the moment of death is determined This creates confusion and disagreement not only among medical

legal and insurance professionals but also within families faced with difficult decisions concerning their loved ones Distinguished bioethicists Robert M Veatch and Lainie F Ross argue that the definition of death is not a scientific question but a social one rooted in religious philosophical and social beliefs Drawing on history and recent court cases the authors detail three potential definitions of death the whole brain concept the circulatory or somatic concept and the higher brain concept Because no one definition of death commands majority support it creates a major public policy problem The authors cede that society needs a default definition to proceed in certain cases like those involving organ transplantation But they also argue the decision making process must give individuals the space to choose among plausible definitions of death according to personal beliefs Taken in part from the authors latest edition of their groundbreaking work on transplantation ethics **Defining Death** is an indispensable guide for professionals in medicine law insurance public policy theology and philosophy as well as lay people trying to decide when they want to be treated as dead **NKJV Life Application Study Bible, Third Edition, Large Print** Tyndale,2022-10
