**Gifted Children** J. Freeman,1980-10-31      **'Gifted Children' in Britain and the World** Jennifer Crane,2025-02-13

This is an open access title available under the terms of a CC BY NC ND 4 0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations The idea that a child is intellectually gifted has a social and cultural history This book analyses that social history at multiple scales and makes the voices of the gifted young themselves central through examination of their poetry letters and life writing In daily encounters those labelled gifted sometimes loved this label and felt special in comparison to peers at school and siblings at home For others gifted was a silly or embarrassing label and many questioned the idea of separating off young people in terms of intelligence as well as the specific forms of testing being used Ideas of the gifted child also reshaped family lives parents dedicated time to providing special leisure spaces for those thought of as gifted running them in their own homes and taking their children significant distances to spend time with others that were also gifted Voluntary organisations were critical here as the network through which young people and adults encountered the term gifted and lived and created it relationally through interactions with one another Voluntary organisations looking to gain attention and visibility also critically shaped the idea that the gifted young were elites of the future central to answering challenges of economic decline global warfare or humanitarian aid The hopes placed on gifted children between the 1960s and the 1990s were often sky high yet many gifted young still felt that the community wasted their talents and did not support them This book then provides new perspectives on the tensions between elitism and equality in modern Britain It also offers vivid stories of optimism hope disappointment and criticism in which young people themselves play a central role      *Gifted Children* Joy Gibson,Prue Chennells,1976

The Education of Gifted Children David Hopkinson,2013-12-16 First Published in 1978 This book seeks to examine what has happened to children of marked ability in a period of confusing growth and change inspired by good intentions The author aims to draw attention to weaknesses of require awareness and to which remedies must be found This title is well suited for those in education studies those practicing within the education system and readers looking to enhance their knowledge of the ongoing modernisation of education in Europe      *Gifted Children* Leta Stetter Hollingworth,1926 The subject that is treated in this volume has engaged a large part of the attention not only of psychologists and educationists but also of laymen It is argued that if nature really endows some children intellectually much more generously than she does others and the data presented in this volume will convince any fair minded person that this is the case the fact is of importance to those who are interested in social advancement as well as to those teachers and parents who are striving to do the best they can for each individual committed to their care A large amount of scientific material is included in this book but it is presented in a straightforward clear interesting manner and it may be predicted that this volume will be read easily and with complete comprehension by parents teachers and laymen as well as by students of human development and of education

Fetterman, 1988-01-01 Fetterman focuses on what actually works in gifted and talented education programs Complementing the psychological perspective on gifted and talented education he adopts an anthropological point of view using methods such as lengthy interviews with students teachers parents administrators and others involved in the school programs daily observation and group discussions to elicit the insider s perspective A ground breaking work Fetterman s timely study provides a comparative picture of over 433 gifted and talented programs in the United States as well as programs in other countries The author s cross cultural perspective points up the need for U S educators to shake themselves out of a national complacency about the gifted and talented and stresses the importance of comparing our own efforts with those of other nations In the process Fetterman proposes a model for educational excellence in terms of the mainstream U S educational system The book will provide new insights for educators and policymakers working in our educational system as they strive to meet the needs of gifted and talented students      **International Handbook of Giftedness and Talent** K. **Looking to the Future** Derek Hodson,2011-10-25 In advocating an action oriented and issues based curriculum this book takes the position that a major but shamefully neglected goal of science and technology education is to equip students

with the knowledge skills attitudes and values to confront the complex and often ill defined socioscientific issues they encounter in daily life as citizens in an increasingly technology dominated world carefully critically confidently and responsibly In outlining proposals for addressing socioscientific issues through a curriculum organized in terms of four increasingly sophisticated levels of consideration the author adopts a highly critical and politicized stance towards the norms and values that underpin both scientific and technological development and contemporary scientific engineering and medical practice criticizes mainstream STS and STSE education for adopting a superficial politically naive and hence educationally ineffective approach to consideration of socioscientific issues takes the view that environmental problems are social problems occasioned by the values that underpin the ways in which we choose to live and urges teachers to encourage students to reach their own views through debate and argument about where they stand on major socioscientific issues including the moral ethical issues they often raise More controversially the author argues that if students are to become responsible and politically active citizens the curriculum needs to provide opportunities for them to experience and learn from sociopolitical action The relative merits of direct and indirect action are addressed notions of learning about action learning through action and learning from action are developed and a case is made for compiling a user friendly database reflecting on both successful and less successful action oriented curriculum initiatives Finally the book considers some of the important teacher education issues raised by this radically new approach to teaching and learning science and technology The book is intended primarily for teachers and student teachers of science technology and environmental education graduate students and researchers in education teacher educators curriculum developers and those responsible for educational policy The author is Emeritus Professor of Science Education at the Ontario Institute for Studies in Education University of Toronto Adjunct Professor of Science Education at the University of Auckland and Visiting Professor of Science Education at the University of Hong Kong His research interests include considerations in the history philosophy and sociology of science and their implications for science and technology education STSE education and the politicization of both students and teachers science curriculum history multicultural and antiracist education and teacher education via action research **Resources**
