

## ГІПОТЕЗИ ФОРМУВАННЯ СОНЯЧНОЇ СИСТЕМИ

Це питання хвилювало астрономів з давніх часів. Нині існує чимало теорій щодо походження Сонячної системи. Розглянемо найвідоміші з них.

Найпопулярнішою в сучасній астрономії є небулярна гіпотеза, запропонована 1775 р. видатним німецьким філософом Іммануїлом Кантом. Він припустив, що Сонячна система виникла з гігантської холодної пилової хмари. Її частки перебували в постійному безладному русі, взаємно притягуючи одна одну, зіткалися, злипалися, утворюючи згущення, які поступово зростали, ущільнювалися і згодом стали основами Сонця й планетам.

**Forest Vegetation of Northeast Asia** Jirí Kolbek, M. Srutek, Elgene E. O. Box, 2013-03-14 When two of us Jirí Kolbek and Miroslav Srutek were working in North Korea on the Czech Slovak field expeditions of the early 1990s we did not think initially of comparing our results with the vegetation of surrounding areas or of writing a book Our efforts mainly involved observing and documenting the vegetation as completely as possible and initial recognition of vegetation units At first we focused on the most obvious vegetation types but eventually also any important types that we could discern Later we focused more on forests since almost all of northeastern Asia has forest potential and forests still do form the landscape matrix in most areas First we studied suburban woods and forests most of which are strongly affected by human activities Later though we also had chances to visit and study lovely mountain regions including Myohyang san Kumgang san Su jang san and the high especially beautiful Changbai shan on the border between North Korea and China The Changbai shan is the highest mountain system in the Korean Peninsula including the highest peak Paektu san We gradually changed our goal from an evaluation of forest data from North Korea to comparison with available field data and literature sources from comparable surrounding areas These include South Korea the Russian Far East northeastern China Manchuria and northern Japan including the Kuril Islands Finally we decided to prepare a preliminary survey of the forest vegetation of the Russian Far East and eventually of all of northeastern Asia which would be published in English *A Russian Perspective on Theoretical Archaeology* Stephen Leach, 2016-07-01 Both the work and the life of Leo S Klejn Russia's foremost archaeological theorist remain generally unrecognized by Western scholars Until now In this biography and summary of his work Stephen Leach outlines Klejn's wide ranging theoretical contributions on the place and nature of archaeology The book details Klejn's diverse work on ethnogenesis migration Homeric studies pagan Slavic religion homosexuality and the history of archaeology his life challenges as a Russian Jewish scholar jailed for homosexuality by the KGB and for his challenges to Marxist dogma his key contributions to theoretical archaeology and in particular Klejn's comparisons between archaeologists and forensic scientists *A History of Modern Planetary Physics* Stephen G. Brush, 1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different theories about the origin of the solar system and the nature of the Earth Did the Earth and other planets form as a by product of a natural process that formed the Sun Did the solar system come into being as the result of catastrophic encounter of two stars Is the inside of the Earth solid liquid or gaseous The three volumes that make up *A History of Modern Planetary Physics* present a survey of these theories Nebulous Earth follows the development of the nineteenth century's most popular explanation for the origin of the solar system Laplace's Nebular Hypothesis This theory supposes that a flattened mass of gas extending beyond Neptune's orbit cooled and shrank throwing off in the process successive rings that in time coalesced to form several planets Poza końcem. nieśmiertelności. Od duszy do świadomości kwantowej. Bruno Del Medico, 2024-09-22 Przez wieki ludzko kwestionowała naturę zjawiska powszechnie znanego jako śmierć i możliwość istnienia poza ziemskim życiem. Ta książka zaprasza nas do zbadania głębi tych starożytnych pytań przez pryzmat metafizyki zastosowanej do współczesnej nauki w celu zrozumienia istoty i natury ludzkiego ducha. Przed pojawieniem się fizyki kwantowej świat niewidzialnych zjawisk znajdował się poza ludzkim zrozumieniem, był tradycyjnie zarezerwowany dla metafizyki, dyscypliny filozoficznej zajmującej się kwestiami ontologicznymi i transcendentnymi. Stare rozróżnienie między tym, co materialne, a tym, co duchowe, było ostry. Fizyka koncentrowała się na badaniu fizycznych i mierzalnych zjawisk, podczas gdy metafizyka zajmowała się kwestiami metafizycznymi, takimi jak istota duszy, natura wiadomości i życie po śmierci. Jednak rewolucja w fizyce kwantowej na początku XX wieku wstrząsnęła podstawami rzeczywistości. Eksperymenty na poziomie subatomowym ujawniły zachowanie materii, które całkowicie nie odpowiadało temu, co przewidywała fizyka klasyczna. Wprowadzono pojęcia takie jak superpozycja kwantowa, splątanie i dualizm fala-cząstka. Zjawiska te są nieuchwytnie nie tylko dla zmysłów, ale i dla obserwacji i stanowią wyzwanie dla naszej tradycyjnej koncepcji obiektywnej, deterministycznej rzeczywistości. W tym kontekście to, co kiedyś należało do domeny metafizyki, takie jak natura ludzkiej wiadomości, czy nieśmiertelność duszy, stopniowo staje się przedmiotem badań fizyki teoretycznej. Niektórzy pionierscy naukowcy próbują opracować modele fizyczne, które mogą wyjaśnić pozornie niefizyczne zjawiska, ale które są ściśle związane z naszym ludzkim doświadczeniem. Na przykład wiadomo, że coraz częściej postrzegana jako wyjątek, śmierć jest związana ze zjawiskami, które mogą być związane z jego interakcjami na poziomie kwantowym. Podobnie niektórzy teoretycy postulują istnienie wymiarów w czasoprzestrzeni, które mogłyby pozwolić na istnienie niematerialnych rzeczywistości, otwierając drzwi do hipotez na temat nieśmiertelności duszy lub możliwości istnienia poza fizycznym przeżyciem. Ostatecznie po ocenie fizyki kwantowej i starożytnych pytań egzystencjalnych, takich jak wiadomość, dusza i życie po śmierci, stanowi fascynującą i kontrowersyjną granicę współczesnych badań naukowych. To interdyscyplinarne podejście na nowo definiuje granice między nauką a duchowością, rzucając wyzwanie naszym tradycyjnym koncepcjom rzeczywistości i otwierając nowe perspektywy na naturę wszechświata i istoty ludzkiej. Ta książka nie pyta, czy istnieje przetrwanie duszy lub wiadomości po śmierci, ale przyjmuje za pewnik transformację, która utrzymuje niezmienną to samo psychologiczne. Pytanie, na które książka próbuje odpowiedzieć, wykorzystując aktualną wiedzę naukową i opinie najbardziej znanych fizyków w teoretycznych, ma na celu zrozumienie, w jakiej formie zachodzi ta transformacja. Najwyraźniej dusza lub wiadomość kwantowa przetrwa, a jako informacja po śmierci. Wysoce zaawansowane spekulacje teoretyczne zastanawiają się, czy w przyszłości mogą być dostępne instrumenty naukowe zdolne do dekodowania tych informacji, a nawet do konwersacji z nimi. Ostatecznie po ocenie fizyki kwantowej i starożytnych pytań egzystencjalnych, takich jak wiadomość, dusza i życie po śmierci, stanowi fascynującą i kontrowersyjną granicę współczesnych badań naukowych.

**Diachronic Interpretation of the Nostratic Macrofamily** Yan Kapranov, Bożena Iwanowska, Bolesław Cieślík, 2024-06-17 This monograph presents a groundbreaking exploration into the Nostratic macrofamily a concept that proposes a common ancestral language for several of the world s foremost language families The study delves deep into the roots of Altaic Afro Asiatic Dravidian Eskimo Aleut Indo European Kartvelian and Uralic languages offering a unique perspective on their interconnections and evolutionary paths The authors examine five pivotal Nostratic etymons from the

Swadesh index to illustrate the shared cognitive frameworks of these diverse linguistic groups This research challenges conventional perspectives on language evolution and introduces new methodologies in cognitive macro comparative studies Key to the work is the hypothesis of divergent convergent and convergent divergent evolutionary patterns stemming from a common Nostratic origin Beyond linguistics this study offers insights into human cognitive development language formation and change mechanisms The Typology of Reflexives Emma Geniesiené, 2011-11-21 Research on language universals and research on linguistic typology are not antagonistic but rather complementary approaches to the same fundamental problem the relationship between the amazing diversity of languages and the profound unity of language Only if the true extent of typological divergence is recognized can universal laws be formulated In recent years it has become more and more evident that a broad range of languages of radically different types must be carefully analyzed before general theories are possible Typological comparison of this kind is now at the centre of linguistic research The series empirical approaches to language typology presents a platform for contributions of all kinds to this rapidly developing field The distinctive feature of the series is its markedly empirical orientation All conclusions to be reached are the result of a deepened study of empirical data General problems are focused on from the perspective of individual languages language families language groups or language samples Special emphasis is given to the analysis of phenomena from little known languages which shed new light on long standing problems in general linguistics The series is open to contributions from different theoretical persuasions It thus reflects the methodological pluralism that characterizes the present situation Care is taken that all volumes be accessible to every linguist and moreover to every reader specializing in some domain related to human language A deeper understanding of human language in general based on a detailed analysis of typological diversity among individual languages is fundamental for many sciences not only for linguists Therefore this series has proven to be indispensable in every research library be it public or private which has a specialization in language and the language sciences To discuss your book idea or submit a proposal please contact Birgit Sievert **Law and the Christian Tradition in Modern Russia** Paul
