## Creating New Opportunities:

The yellow square at left represents the distance from Earth once covered by NASA's Space Shuttle Program and currently traveled by Russian Soyuz spacecraft transporting astronauts to and from the International Space Station. The space station allows us to master the fundamentals required for deep space exploration while relatively close to Earth.

## Our Home Base:

Planet Earth has a circumference of 24,901 miles and a diameter of 7,918 miles. Using this as a handy reference, we see the blue sphere representing our home planet grow smaller as the relative distance involved in sending humans into space increases.

## 1. Looking Beyond LEO:

The yellow line between the moon and Earth represents 238,000 miles. This is the distance the Apollo astronauts traveled to be the first humans to reach the moon.

## 2. The Farthest We've Ever Been:

The moon's orbit around Earth is marked by the dotted circular line. Beyond that, the solid white line above represents a mark in space 249,000 miles away, the farthest distance any human has ever traveled from Earth, set during the Apollo 13 mission.

## 3. Where We're Headed:

During Exploration Mission-1, or EM-1, NASA's Space Launch System, or SLS, will carry an uncrewed Orion spacecraft into space on a mission that will take it 280,000 miles away from Earth.

EM-1

While EM-1 is a test of SLS and Orion for human exploration, the power and flexibility of the rocket also enable future game-changing science missions that will expand our knowledge of our solar system and beyond.
