Gorgon Paleontology Obsession And The Greatest Catastrophe In Earth's History:

Gorgon Peter Douglas Ward, 2005 Based on more than a decade's research in South Africa's Karoo Desert this remarkable journey of discovery and real life adventure deep into Earth's history is offered by a renowned scientist Photo insert

Cretaceous Project 200, Volume 1: The Cretaceous World M.B. Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M. Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d'Omalus d'Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers that demonstrate these particularly Cretaceous events of warm climates sea level change and the impact of major volcanic events on the fauna and flora of the time Geochemical and stable isotope data are used to interpret these changing environments and their impact on the Cretaceous ecosystem The volume closes with a description of the recent drilling of the Chicxulub bolide impact site

A New History of Life Peter Ward, Joe Kirschvink, 2015-01-01 Charles Darwin's theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that Now two pioneering scientists draw on their years of experience in paleontology biology chemistry and astrobiology to deliver an eye opening narrative using a generation's worth of insights culled from new research Writing with zest humor and clarity Ward and Kirschvink show that many of our long held beliefs about the history of life are wrong Three central themes emerge First Ward and Kirschvink argue that catastrophe shaped life's history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event Second life consists of carbon but oxygen carbon dioxide and hydrogen sulfide determined how it evolved Third ever since Darwin we have thought of evolution in terms of species Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar And in a provocative coda they assemble discoveries from the latest cutting edge research to imagine how the history of life might unfold deep into the future

Lamarck's Revenge Peter Ward, 2018-08-14 A riveting explanation of epigenetics offering startling insights into our inheritable traits In the 1700s Jean Baptiste Lamarck first described epigenetics to explain the inheritance of acquired characteristics however his theory was supplanted in the 1800s by Darwin's theory of evolution by natural selection through heritable genetic mutations But natural selection could not adequately explain how rapidly species rediversified and repopulated after mass extinctions Now advances in the study of DNA and RNA have resurrected epigenetics which can create radical physical and physiological changes in subsequent generations by the simple addition of a single small molecule thus passing along a propensity for molecules to attach in the same places in the next generation Epigenetics is a complex

process but paleontologist and astrobiologist Peter Ward breaks it down for general readers using the epigenetic paradigm to reexamine how the history of our species from deep time to the outbreak of the Black Plague and into the present has left its mark on our physiology behavior and intelligence Most alarming are chapters about epigenetic changes we are undergoing now triggered by toxins environmental pollutants famine poor nutrition and overexposure to violence Lamarck s Revenge is an eye opening and provocative exploration of how traits are inherited and how outside influences drive what we pass along to our progeny

Origins Frank H. T. Rhodes,2016-07-29 Fossils are the fragments from which piece by laborious piece the great mosaic of the history of life has been constructed Here and there we can supplement these meager scraps by the use of biochemical markers or geochemical signatures that add useful information but even with such additional help our reconstructions and our models of descent are often tentative For the fossil record is as we have seen as biased as it is incomplete But fragmentary selective and biased though it is the fossil record with all its imperfections is still a treasure Though whole chapters are missing many pages lost and the earliest pages so damaged as to be as yet virtually unreadable this the greatest biography of all is one in whose closing pages we find ourselves from Origins In Origins Frank H T Rhodes explores the origin and evolution of living things the changing environments in which they have developed and the challenges we now face on an increasingly crowded and polluted planet Rhodes argues that the future well being of our burgeoning population depends in no small part on our understanding of life s past its long and slow development and its intricate interdependencies Rhodes s accessible and extensively illustrated treatment of the origins narrative describes the nature of the search for prehistoric life the significance of geologic time the origin of life the emergence and spread of flora and fauna the evolution of primates and the emergence of modern humans

teaching tab with syllabi class activities and well designed classroom tested resources An updated teacher s manual available online including sample examination questions additional resources for each chapter and special assistance for teaching ESL students Updated career advice for international studies majors **Planet of the Bugs** Scott Richard Shaw,2014-09-11

This excellent guide to the history of our planet offers a bugs eye view of evolution biodiversity and todays ecological crises The Guardian UK According to entomologist Scott Richard Shaw dinosaurs never ruled the earth and neither do humans The true potentates of our planet are and always have been insects Starting in the shallow oceans of ancient Earth and ending in the far reaches of outer space where insect like aliens may also reign Planet of the Bugs spins a sweeping account of insects evolution from humble arthropod ancestors into the bugs we know today Leaving no stone unturned Shaw explores how evolutionary innovations such as small body size wings metamorphosis and parasitic behavior have enabled insects to disperse widely occupy increasingly narrow niches and survive global catastrophes in their rise to dominance Through bizarre and buggy tales from caddisflies that construct portable houses to parasitic wasp larvae that develop in the blood of host insects he demonstrates how changes in our planet s geology flora and fauna contributed to insects success and also how in return insects came to shape terrestrial ecosystems And in his visits to hyperdiverse rain forests to highlight the current insect extinction crisis Shaw reaffirms how crucial these tiny beings are to planetary health and human survival

Prehistoric Life Bruce S. Lieberman,Roger L. Kaesler,2010-04-23 Prehistoric life is the archive of evolution preserved in the fossil record This book focuses on the meaning and significance of that archive and is designed for introductory college science students including non science majors enrolled in survey courses emphasizing paleontology geology and biology From the origins of animals to the evolution of rap music from ancient mass extinctions to the current biodiversity crisis and from the Snowball Earth to present day climate change this book covers it with an eye towards showing how past life on Earth puts the modern world into its proper context The history of life and the patterns and processes of evolution are especially emphasized as are the interconnections between our planet its climate system and its varied life forms The book does not just describe the history of life but uses actual examples from life s history to illustrate important concepts and theories

Applications of Palaeontology Robert Wynn Jones,2011-08-18 Palaeontology the scientific study of fossils has developed from a descriptive science to an analytical science used to interpret relationships between Earth and life history This book provides a comprehensive and thematic treatment of applied palaeontology covering the use of fossils in the ordering of rocks in time and in space in biostratigraphy palaeobiology and sequence stratigraphy Robert Wynn Jones presents a practical workflow for applied palaeontology including sample acquisition preparation and analysis and interpretation and integration He then presents numerous case studies that demonstrate the applicability and value of the subject to areas such as petroleum mineral and coal exploration and exploitation engineering geology and environmental science Specialist applications outside of the geosciences including archaeology forensic science medical palynology

Mathematics for the Environment Martin Walter, 2011-01-18 Mathematics for the Environment shows how to employ simple mathematical tools such as arithmetic to uncover fundamental conflicts between the logic of human civilization and the logic of Nature These tools can then be used to understand and effectively deal with economic environmental and social issues With elementary mathematics the book se

Anticipation, Sustainability, Futures and Human Extinction Bruce E. Tonn, 2021-05-16 This book considers the philosophical underpinnings policy foundations institutional innovations and deep cultural changes needed to ensure that humanity has the best chance of surviving and flourishing into the very distant future Anticipation of threats to the sustainability of human civilization needs to encompass time periods that span not just decades but millennia All existential risks need to be jointly assessed as opposed to addressing risks such as climate change and pandemics separately Exploring the potential events that are likely to cause the biggest risks as well as asking why we should even desire to thrive into the distant future this work looks at the biggest picture possible in order to argue that futures oriented decision making ought to be a permanent aspect of human society and futures oriented policy making must take precedent over the day to day policy making of current generations in times of great peril The book concludes with a discourse on the truly fundamental bottom up changes needed in our personal psychologies and culture to support these top down recommendations This book is of great interest to philosophers policy analysts political scientists economists psychologists planners and theologians
