Analyzing Ecological Data

Alain Zuur,Elena N. Ieno,Graham M. Smith,2007-08-29 Which test should I apply During the many years of working with ecologists biologists and other environmental scientists this is probably the question that the authors of this book hear the most often The answer is always the same and along the lines of What are your underlying questions What do you want to show The answers to these questions provide the starting point for a detailed discussion on the ecological background and purpose of the study This then gives the basis for deciding on the most appropriate analytical approach Therefore a better start ing point for an ecologist is to avoid the phrase test and think in terms of analy sis A test refers to something simple and unified that gives a clear answer in the form of a p value something rarely appropriate for ecological data In practice one has to apply a data exploration check assumptions validate the models per haps apply a series of methods and most importantly interpret the results in terms of the underlying ecology and the ecological questions being investigated Ecology is a quantitative science trying to answer difficult questions about the complex world we live in Most ecologists are aware of these complexities but few are fully equipped with the statistical sophistication and understanding to deal with them

Carbon Sequestration Potential of Agroforestry Systems

B. Mohan Kumar,P. K. Ramachandran Nair,2011-08-05 Tree based production systems abound especially in the tropics Despite the pervasiveness of such multipurpose trees outside forest resources they have not attracted adequate attention in the development paradigms of many nation states These multispecies production systems impact the ecosystem processes favourably Yet our understanding of the diversity attributes and carbon dynamics under agroforestry is not adequate This book focuses on the role of multispecies production systems involving tree and crop species as a means for carbon sequestration and thereby reduce atmospheric carbon dioxide levels Sixteen chapters organized into three broad sections titled Measurement and Estimation Agrobiodiversity and Tree Management and Policy and Socioeconomic Aspects represent a cross section of the opportunities and challenges in current research and emerging issues in harnessing carbon sequestration potential of agroforestry systems
