Wonder and Education Anders Schinkel, 2020-11-12 Many people whether educators or not will agree that an education that does not inspire wonder is barren Wonder is commonly perceived as akin to curiosity as stimulating inquiry and as something that enhances pleasure in learning but there are many experiences of wonder that do not have an obvious place in education In Wonder and Education Anders Schinkel theorises a kind of wonder with less obvious yet fundamental educational importance which he calls contemplative wonder Contemplative wonder disrupts frameworks of understanding that are taken for granted and perceived as natural and draws our attention to the world behind our constructions sparking our interest in the world as something worth attending to for its own sake rather than for our purposes It opens up space for the consideration of radical alternatives wherever it occurs and in many cases is linked with deep experiences of value therefore it is not just important for education in general but also more specifically for moral and political education *Addresses and Proceedings - National Education Association of the United States* National Education Association of the United States, 1914 Vols for 1866-70 include Proceedings of the American Normal School Association 1866-69 include Proceedings of the National Association of School Superintendents 1870 includes Addresses and journal of proceedings of the Central College Association
