Research Jeffrey Prager, Douglas Longshore, Melvin Seeman, 2012-12-06 The desegregation situation is the keynote theme of the following chapters I Each of them touches on a different dimension of the situation the historical the temporal the spatial But the reader perusing the essays with the situation in mind should remember that the desegregation situation should not be interpreted literally Authorities and adults certainly school age children probably are influenced by their awareness of a sequence of past and future situations Some may even operate with William James's 1890 p 608 notion of the specious present that has melted in our grasp fled ere we could touch it gone in the instant of becoming thus reducing the potency of the present situation Others may be dancing to a slower tempo of change thus becoming more responsive to the present situation Whatever the perceived tempo many must share the view that the future may reverse the direction of the past Some may see that new future direction as unswerving unending or long lasting others may see it as short lived And it is through attention to the phenomenological description of desegregation that these issues can be explored a theme that is considered in several of the following chapters

The Oxford Handbook of the Archaeology of Childhood Sally Crawford, Dawn Hadley, Gillian Shepherd, 2018-05-10 Real understanding of past societies is not possible

without including children and yet they have been strangely invisible in the archaeological record Compelling explanation about past societies cannot be achieved without including and investigating children and childhood However marginal the traces of children s bodies and bricolage may seem compared to adults archaeological evidence of children and childhood can be found in the most astonishing places and spaces The archaeology of childhood is one of the most exciting and challenging areas for new discovery about past societies Children are part of every human society but childhood is a cultural construct Each society develops its own idea about what a childhood should be what children can or should do and how they are trained to take their place in the world Children also play a part in creating the archaeological record itself In this volume experts from around the world ask questions about childhood thresholds of age and growth childhood in the material culture the death of children and the intersection of the childhood and the social economic religious and political worlds of societies in the past **Education for Traditional Food Procurement in the Orinoco Delta** K. Mushrooms in Forests and Woodlands Anthony B. Cunningham, Xuefei Yang, 2012-06-25 Many mushrooms or the fruits of fungi are extremely valuable wild gathered products which are utilised for both their medicinal properties and as food In many of the world's tropical and temperate forests they are the primary source of income for the people who live there These forests range from temperate woodlands and small forests to high altitude forests in the Himalaya and tropical miombo woodlands in south central Africa In south west China over 200 species of wild fungi in 64 genera are commercially traded while in Europe and North America woodlands and small forests are the source of many highly prized mushrooms and an essential resource for many small enterprises and collectors Yet the increased demand for timber has resulted in the rapid expansion of forestry which in turn has destroyed the natural habitat of many fungi unbalancing both forest economics and ecology Despite the economic social and cultural values of fungi there is a general lack of understanding of their importance to local livelihoods and forest ecology This book aims to fill this gap and extends the People and Plants Conservation Series beyond the plant kingdom into the related world of fungi and mushrooms It demonstrates the crucial roles that fungi play in maintaining forest ecosystems and the livelihoods of rural people throughout the world while providing good practice guidelines for the sustainable management of this resource and an assessment of economic value It brings together the perspectives of biologists anthropologists and forest and woodland managers to provide a unique inter disciplinary and international overview of the key issues
