Edmond Halley And His Comet:

Edmond Halley and His Comet Louis Baldwin, 1985 **Edmond Halley, the Man and His Comet** Barbara Hooper Heckart, 1984 Presents the life of the seventeenth century scientist who made predictions about the comet which bears his name and discusses many other important scientific contributions he made **Correspondence and Papers of Edmond Halley** Edmond Halley, 1932 **Edmond Halley** Alan H. Cook, 1998 Edmond Halley 1656 1742 MA LLD FRS Capt RN Savillian Professor of Geometry and Astronomer Royal stands pre eminent among Oxford English and European scientists A contemporary of Wren Pepys Hooke Handel Purcell and Dryden he was a schoolboy in London while the Great Fire raged and was an active participant in the Enlightenment an age of profound developments in all the arts and sciences As a younger contemporary of Isaac Newton he had a crucial part in the Newtonian revolution in the natural sciences It was Halley who set the question that led Newton to write the Principia and who edited paid for and reviewed it In later years he applied the methods of the Principia widely in astronomy and geophysics Now more widely known for his prediction of the return of his comet Halley discovered the proper motion of stars made important studies of the moon's motion and his investigations of the Earth's magnetic field and of tides were unrivalled for centuries His prediction of the transit of Venus led to Cook's voyage to Tahiti He was far more than an cloistered academic his exploits as a naval captain led to perilous adventures and he was also a notable servant of the State Much material about his eventful career has come to light in recent years making this a timely new account of the life scientific interests and continuing influence of this engaging and adventurous scholar Sir Alan Cook has written a fascinating and illuminating account of Halley's life and science making this a unique and highly readable biography of one of the key figures of his time Edmond Halley David Carl Ipsen, 2004-11 Describes information about Edmond Halley and his other contributions to science and the world Edmond Halley: More Than A Man with A Comet D. C. Ipsen, 2004-11 Today Edmond Halley is known as the scientist whose comet returns every 75 years or so But he was a man of many talents who did much more than make a prediction about a comet that happen to appear during his time Probably Halley's biggest impact on history was from an idea for finding the distance to the sun After viewing a transit of Mercury across the sun's face during a star mapping trip to the southern hemisphere Halley hit on the idea of timing a transit of Venus in different parts of the world as a way of discovering the distance to the sun Halley's scheme would eventually send Captain James Cook on his first voyage into the South Pacific aboard Endeavour years after Halley's death Halley himself made several scientific trips to southern waters His aim was to investigate the earth's magnetic field but he was also charged with attempting to discover new lands in the South Atlantic Beyond a scrap of land many miles off the coast of Brazil he found nothing new in the way of land But measurements of the earth's magnetism gave support for his ingenious theory of how the earth is put together Adventurer Halley also gained fame as an early underwater explorer He developed a diving bell and a diving helmet and used them under the waters of the English Channel intending eventually to hunt for sunken treasure

Halley was surely the 17th century's most active promoter of science serving for years as editor for publications of the influential Royal Society. He is acclaimed for encouraging the reluctant Isaac Newton to publish his ideas about motion and gravity. Altogether Halley gave the world much more than a name for a speedy comet. *Astronomers and Cosmologists* Dean Miller, 2014-01-01 In this book a breakdown of the life and work of some of history's pioneers in the study of astronomy and cosmology are thoroughly explored. This volume provides excellent biographical sketches for trailblazers in the sciences. Articles are devoted to specific scientists covering the contributions to their field specifically addressing how their research discoveries and inventions impacted human understanding and experience. This historical review includes scientists from around the world and throughout the centuries with a chapter specifically devoted to the top scientific contributors of the 21st century. The Greatest Comets in History David A.J. Seargent, 2008-12-16 Naked eye comets are far from uncommon. As a rough average one appears every 18 months or thereabouts and it is not very unusual to see more than two in a single year. The record so far seems to have been 2004 with a total of five comets visible without optical aid. But 2006, 1970 and 1911 were not far behind with a total of four apiece. Yet the majority of these pass unnoticed by the general public. Most simply look like fuzzy stars with tails that are either faint or below the naked eye threshold. The classical comet, a bright star-like object with a long flowing tail, is a sight that graces our skies about once per decade on average. These great comets are surely among the most beautiful objects that we can see in the heavens and it is no wonder that they created such fear in earlier times. Just what makes a comet great is not easy to define. It is neither just about brightness nor only a matter of size. Some comets can sport prodigiously long tails and yet not be regarded as great. Others can become very bright but hardly anyone other than a handful of enthusiastic astronomers will ever see them. Much depends on their separation from the Sun, the intensity of the tail and so forth. Edmond Halley David K. Love, 2023-11-15 Edmond Halley is known far and wide thanks largely to the comet bearing his name, the return of which he predicted in 1705. While that discovery would be enough to make the career of any scientist, Halley's massive contributions to the fields of astronomy, navigation, geophysics, mathematics, engineering and actuarial science as a young man and eventually as Astronomer Royal are mostly overlooked. Edmond Halley: The Many Discoveries of the Most Curious Astronomer Royal is a revelatory and deeply researched biography of a man whose defining achievement isn't even the half of it. A jack of all trades when it came to scientific reasoning, an all-around academic and workaholic who couldn't leave well enough alone, Halley was amazingly productive and prolific. He was behind some of the most groundbreaking discoveries in human history. It was Halley who was the first to accurately plot the stars of the southern hemisphere. He published Isaac Newton's *Principia*, arguably the most important scientific text ever written, translated the works of ancient Greek mathematician Apollonius, captained the ship *Paramore* on a scientific expedition to plot the Earth's magnetic fields, was the first to calculate mortality annuities, creating the foundation for actuarial science, made improvements to the diving bell, surveyed the tides of the English Channel and began the movement

to accurately measure the distance between the Earth and Sun unlocking the key to determining the distances to the nearest stars In this incisive and perceptive biography author David K Love reveals the boundless mind and endless curiosity of Edmond Halley firmly cementing the legacy of the second Astronomer Royal among the first rate scientists of his time

Celestial Mechanics Alessandra Celletti,Ettore Perozzi,2007-06-24 I was delighted to be invited by my colleagues Alessandra Celletti and Ettore Perozzi to provide a foreword to their book Celestial Mechanics The Waltz of the Planets Having known them for many years and long admired their work in the subject so many of us love and are fascinated by I read with great attention and pleasure the text when it arrived It is a formidable task they have set themselves to provide a book that describes attempts by successive generations of astronomers from the dawn of history five millennia ago to observe record and understand the phenomena of the heavens particularly the intricate and perplexing behaviour of the planets Sun and Moon As naked eye astronomy became aided by the telescope and the photographic plate and since the middle of the twentieth century by instruments launched on

spacecraft into circum Earth orbit or to the Moon and planets and beyond the discovery of new satellites scores of them and ring systems displaying new and initially perplexing behaviour also demanded explanations for that behaviour It is also the inspiring story of science itself with special reference to how lonely individuals impelled by curiosity and dedicated to seeking the truth and nothing but the truth about the fascinating phenomena of nature ultimately became accepted as scientists those players in the most successful endeavour ever engaged in by the human race **Voltaire's Riddle** Andrew J.

The Quest for Comets David H. Levy, 2013-11-11 The brilliant trailing beauty of fiery comets has inspired fear wonder and awe since the dawn of human history Brighter than stars moving and disappearing in their own singular orbits comets have been among the most mysterious elements in the sky eluding our understanding until very recently With the aid of space probes scientists have discovered that these swiftly moving chunks of ice and carbon are more plentiful and far more dangerous than suspected Scientists are also beginning to realize the monumental role played by comets in the development of the Earth and solar system David Levy describes in dramatic detail the thrilling yet often devastating effects of comet collisions In the dawn of our solar system the Earth was barraged with comets that may have carried the materials necessary to lay the foundations for life on this planet Levy also presents compelling evidence for later comet collisions including those of the age of dinosaurs Great impacts Levy asserts not only caused the extinction of the dinosaurs but ushered in new species of life As Levy so clearly explains scientists are realizing that comet collisions are virtually inevitable Levy reveals possible future collisions with the Earth and describes the terrible risks to life they would pose He even shows how we might prepare to withstand the impact of large comets in the future
