Pine Laura Mason, 2013-08-15 Now in paperback an enduring survey of the venerable trees Since the pine tree is able to sprout after forest fires on mountainsides and in semi desert climes it is no surprise that the ever resilient tree signifies longevity wisdom and immortality From the pine cone staffs carried by the worshippers of Bacchus in the classical world to their role in the movement to establish national parks in nineteenth century North America pine trees and their symbolism run deep in cultures around the globe In Pine Laura Mason explores the many ways pines have inspired and been used by people throughout history Mason examines how the somber brooding atmosphere of pine woods the complex forms of pine cones and the coniform shape of the trees themselves have aroused the creativity of artists writers filmmakers and photographers She also considers the many ways we use the tree its resin once provided adhesives waterproofing and medicines and its wood continues to be incorporated into

buildings furniture and the pulp used to make paper while its cones provide pine nuts and other food for animals and humans Filled with one hundred illustrations Pine provides a fascinating survey of these rugged aromatic trees that are found the world over Green Pesticides Handbook Leo M.L. Nollet, Hamir Singh Rathore, 2017-06-13 Green pesticides also called ecological pesticides are pesticides derived from organic sources which are considered environmentally friendly and are causing less harm to human and animal health and to habitats and the ecosystem Essential oils based insecticides started have amazing features This book gives a full spectrum of the whole range of essential oil based pesticides that may be used in pest control It discusses the uses and limitations including the recent advances in this area It describes the metabolism and mode of action and provides the present status of essential oil based pesticide residues in foodstuffs soil and water

Relevant Perspectives in Global Environmental Change Julius Agboola, 2011-12-22 Over the years environmental change has sharpened significant dynamic evolution and knowledge in organizational structures of organisms from cellular molecular to macro organism level including our society Changes in social and ecological systems due to environmental change will hopefully result in a shift towards sustainability with legislative and government entities responding to diverse policy and management issues concerning the building management and restoration of social ecological systems on a regional and global scale Solutions are particularly needed at the regional level where physical features of the landscape biological systems and human institutions interact The purpose of this book is to disseminate both theoretical and applied studies on interactions between human and natural systems from multidisciplinary research perspectives on global environmental change It combines interdisciplinary approaches long term research and a practical solution to the increasing intensity of problems related to environmental change and is intended for a broad target audience ranging from students to specialists **Post-Fire Management and Restoration of Southern European Forests** Francisco Moreira, Margarita Arianoutsou, Piermaria Corona, Jorge De las Heras, 2011-12-10 In spite of all the efforts made in fire prevention and suppression every year about 45 000 forest fires occur in Europe burning ca 0 5 million hectares of forests and other rural lands The management of these burned forests has been given much less attention than fire prevention or fire suppression issues but the post fire management of burned areas raises strong concerns economic and social impacts soil erosion and water quality biodiversity loss forest restoration Although there are a few publications which address post fire management the focus of these has been either on general approaches to restoration or specific topics such as preventing post fire soil erosion This book is about the post fire management of fire prone forest types in southern Europe It provides the first comprehensive overview of the topic ranging from stand level to landscape level management and from emergency actions to long term restoration approaches

Terrestrial Vegetation of California, 3rd Edition Michael Barbour, Todd Keeler-Wolf, Allan A. Schoenherr, 2007-07-17 This completely new edition of Terrestrial Vegetation of California clearly documents the extraordinary complexity and richness of the plant communities and of the state and the forces that shape

them This volume is a storehouse of information of value to anyone concerned with meeting the challenge of understanding managing or conserving these unique plant communities under the growing threats of climate change biological invasions and development Harold Mooney Professor of Environmental Biology Stanford University The plants of California are under threat like never before Traditional pressures of development and invasive species have been joined by a newly recognized threat human caused climate change It is essential that we thoroughly understand current plant community dynamics in order to have a hope of conserving them This book represents an important well timed advance in knowledge of the vegetation of this diverse state and is an essential resource for professionals students and the general public alike Brent Mishler Director of the University Jepson Herbaria and Professor of Integrative Biology University of California Berkeley

Modelling, Monitoring and Management of Forest Fires J. de las Heras, C.A. Brebbia, D. Viegas, V. Leone, 2008-08-26 At present there is insufficient knowledge of the behavior of fires and how they propagate This lack of information makes it very hard to control these phenomena and is one of the biggest obstacles to the development of a reliable decision support system Public concern regarding this topic is increasing as uncontrolled fires may lead to major ecological disasters and usually result in negative economic and health implications for the region Containing papers presented at the First International Conference on Modelling Monitoring and Management of Forest Fires this book addresses the latest research and applications of available computational tools to analyse and predict the spread of forest fires in order to prevent or reduce major loss of life and property as well as damage to the environment Such tools must be able to take into consideration a large number of different parameters The book thus deals with all aspects of forest fires from fire propagation in different scenarios to the optimum strategies for fire fighting It also covers issues related to economic ecological social and health effects Featured topics include Computer Models for Fire Propagation Risk and Vulnerability Assessment Fire Combustion Models Computational Methods and Experiments Case Studies Emergency Response Systems Optimization Models for Fire Mitigation Environmental Impact Models Air Pollution and Health Risk Interaction between Meteorological and Forest Fires Models Economic Impact Models Forest Material Characterisation Eco Remediation Models Decision Support Systems Monitoring Systems and Data Acquisition and Analysis

Conifer Reproductive Biology Claire G. Williams, 2009-05-01 When it comes to reproduction gymnosperms are deeply weird Cycads and co fers have drawn out reproduction at least 13 genera take over a year from pollination to fertilization Since they don't apparently have any selection mechanism by which to discriminate among pollen tubes prior to fertilization it is natural to wonder why such a delay in reproduction is necessary Claire Williams book celebrates such oddities of conifer reproduction She has written a book that turns the context of many of these reproductive quirks into deeper questions concerning evolution The origins of some of these questions can be traced back Wilhelm Hofmeister's 1851 book which detailed the revolutionary idea of alternation of generations This alternation between diploid and haploid generations was eventually to become one of the key unifying ideas

in plant evolution Dr Williams points out that alteration of generations in conifers shows strong divergence in the evolution of male and female gametes as well as in the synchronicity of male and female gamete development How are these coordinated to achieve fertilization Books on conifer reproduction are all too rare The only major work in the last generation was Hardev Singh's 1978 *Embryology of Gymnosperms* a book that summarized the previous century's work Being a book primarily about embryology it stopped short of putting conifer reproduction in a genetic or evolutionary context

The Conifers: Genomes, Variation and Evolution David B. Neale, Nicholas C. Wheeler, 2019-03-23 This book is the first comprehensive volume on conifers detailing their genomes variations and evolution The book begins with general information about conifers such as taxonomy geography reproduction life history and social and economic importance Then topics discussed include the full genome sequence complex traits phenotypic and genetic variations landscape genomics and forest health and conservation This book also synthesizes the research included to provide a bigger picture and suggest an evolutionary trajectory As a large plant family conifers are an important part of economic botany The group includes the pines spruces firs larches yews junipers cedars cypresses and sequoias Of the phylum Coniferophyta conifers typically bear cones and evergreen leaves Recently there has been much data available in conifer genomics with the publication of several crop and non crop genome sequences In addition to their economic importance conifers are an important habitat for humans and animals especially in developing parts of the world The application of genomics for improving the productivity of conifer crops holds great promise to help provide resources for the most needy in the world

Genetics, Genomics and Breeding of Conifers Christophe Plomion, Jean Bousquet, Chittaranjan Kole, 2011-08-10 With contributions by internationally reputed researchers in the field this book presents the implications of the genomic revolution for conifers promoting a better understanding of the evolution of these organisms as well as new knowledge about the molecular basis of quantitative trait variation Both of these discoveries play important roles in their domestication Topics include cytogenetics patterns of nucleotide diversity genetic mapping integration of molecular markers in breeding transcriptomics advances in proteomics and metabolomics in gymnosperms and economic importance

Conifers of the World James E. Eckenwalder, 2009-11-14 Researched for more than three decades this definitive work provides up to date descriptions of all the true conifers of the world including 545 species of trees and shrubs Written for accessibility to both horticultural and botanical audiences it is the first comprehensive update of conifer taxonomy in nearly a century Noted conifer taxonomist James E Eckenwalder also discusses the relationships among the groups practical usages champion trees fossil occurrences and biology New identification guides for the families and genera are based whenever possible on foliage features and thus should be easier to use than traditional conifer keys which focus on seasonal and often microscopic cone characters Eckenwalder shares the reasoning behind his taxonomic decisions many of which are unique to this book reflecting a comprehensive reevaluation of conifer classification He also outlines the features sought in cultivars of each genus particular cultivation concerns and conifers recommended for cultivation under various conditions and to achieve different effects Some 3 000 cultivars have been available in recent times more than five times the total number of conifer species Several hundred original illustrations include drawings of the seed cones for all genera as well as for representative species Maps of the natural distribution of each genus allow for easy comparison of ranges Handsome black and white photographs of species in their natural habitats and attractive color photos further enrich the volume More than 100 images reproduce foliage of many genera as an aid in identification With its unprecedented attention to detail and extensive bibliography this major work is an essential reference for botanists naturalists and horticulturists
