Peña, 2022-09-13 Mexican Americans have traditionally had a strong land ethic believing that humans must respect la tierra because it is the source of la vida As modern market forces exploit the earth communities struggle to control their own ecological futures and several studies have recorded that Mexican Americans are more impacted by environmental injustices than are other national origin groups In our countryside agricultural workers are poisoned by pesticides while farmers have lost ancestral lands to expropriation And in our polluted inner cities toxic wastes sicken children in their very playgrounds and homes This book addresses the struggle for environmental justice grassroots democracy and a sustainable society from a variety of Mexican American perspectives It draws on the ideas and experiences of people from all walks of life activists farmworkers union organizers land managers educators and many others who provide a clear overview of the most critical ecological issues facing Mexican origin people today The text is organized to first provide a general introduction to ecology from both scientific and political perspectives It then presents an environmental history for Mexican origin people on both sides of the border showing that the ecologically sustainable Norte o land use practices were eroded by the conquest of El Norte by the United States It finally offers a critique of the principal schools of American environmentalism and introduces the organizations and struggles of Mexican Americans in contemporary ecological politics Devon Pe a contrasts tenets of radical environmentalism with the ecological beliefs and grassroots struggles of Mexican origin people then shows how contemporary environmental justice struggles in Mexican American communities have challenged dominant concepts of environmentalism Mexican Americans and the Environment is a didactically sound text that introduces students to the conceptual vocabularies of ecology culture history and politics as it tells how competing ideas about nature have helped shape land use and environmental policies By demonstrating that any consideration of environmental ethics is incomplete without taking into account the experiences of Mexican Americans it clearly shows students that ecology is more than nature

Hill,2017-03-31 The dramatic transformation of our planet by human actions has been heralded as the coming of the new epoch of the Anthropocene Human relations with water raise some of the most urgent questions in this regard The starting point of this book is that these changes should not be seen as the result of monolithic actions of an undifferentiated humanity but as emerging from diverse ways of relating to water in a variety of settings and knowledge systems With its large population and rapid demographic and socioeconomic change Asia provides an ideal context for examining how varied forms of knowledge pertaining to water encounter and intermingle with one another While it is difficult to carry out comprehensive research on water knowledge in Asia due to its linguistic political and cultural fragmentation the topic nevertheless has relevance across boundaries By using a carefully chosen selection of case studies in a variety of locations and across diverse disciplines the book demonstrates commonalities and differences in everyday water practices around Asia while challenging both romantic presumptions and Eurocentrism Examples presented include class differences in water use in the megacity of Delhi India the impact of radiation on water practices in Fukushima Japan the role of the King in hydraulic practices in Thailand and ritual irrigation in Bali Indonesia
