Specification, Estimation, and Analysis of Macroeconometric Models Ray C. Fair,1984 This book gives a practical applications oriented account of the latest techniques for estimating and analyzing large nonlinear macroeconomic models Ray Fair demonstrates the application of these techniques in a detailed presentation of several actual models including his United States model his multicountry model Sargent s classical macroeconomic model autoregressive and vector autoregressive models and a small twelve equation linear structural model He devotes a good deal of attention to the difficult and often neglected problem of moving from theoretical to econometric models In addition he provides an extensive discussion of optimal control techniques and methods for estimating and analyzing rational expectations models A computer program that handles all the techniques in the book is available from the author making it possible to use the techniques with little additional programming The book presents the logic of this program A smaller program for personal microcomputers for analysis of Fair s United States model is available from Urban Systems Research Engineering Inc Anyone wanting to learn how to use large macroeconomic models including researchers graduate students economic forecasters and people in business and government both in the United States and abroad will find this an essential guidebook Statistical and Econometric Methods for Transportation Data Analysis, Second Edition Simon P. Washington,Matthew G. Karlaftis,Fred L. Mannering,2010-12-02 The complexity diversity and random nature of transportation problems necessitates a broad analytical toolbox Describing tools commonly used in the field Statistical and Econometric Methods for Transportation Data Analysis Second Edition provides an understanding of a broad range of analytical tools required to solve transportation problems It includes a wide breadth of examples and case studies covering applications in various aspects of transportation planning engineering safety and economics After a solid refresher on statistical fundamentals the book focuses on continuous dependent variable models and count and discrete dependent variable models Along with an entirely new section on other

statistical methods this edition offers a wealth of new material New to the Second Edition A subsection on Tobit and censored regressions An explicit treatment of frequency domain time series analysis including Fourier and wavelets analysis methods New chapter that presents logistic regression commonly used to model binary outcomes New chapter on ordered probability models New chapters on random parameter models and Bayesian statistical modeling New examples and data sets Each chapter clearly presents fundamental concepts and principles and includes numerous references for those seeking additional technical details and applications To reinforce a practical understanding of the modeling techniques the data sets used in the text are offered on the book's CRC Press web page PowerPoint and Word presentations for each chapter are also available for download

Spatial Econometrics: Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Bayesian Inference in Dynamic Econometric Models Luc Bauwens, Michel Lubrano, Jean-François Richard, 2000-01-06 This book contains an up to date coverage of the last twenty years advances in Bayesian inference in econometrics with an emphasis on dynamic models It shows how to treat Bayesian inference in non linear models by integrating the useful developments of numerical integration techniques based on simulations such as Markov Chain Monte Carlo methods and the long available analytical results of Bayesian inference for linear regression models It thus covers a broad range of rather recent models for economic time series such as non linear models autoregressive conditional heteroskedastic regressions and cointegrated vector autoregressive models It contains also an extensive chapter on unit root inference from the Bayesian viewpoint Several examples illustrate the methods

Evaluation of Econometric Models Jan Kmenta, James B. Ramsey, 2014-05-10 Evaluation of Econometric Models presents approaches to assessing and enhancing the progress of applied economic research This book discusses the problems and issues in evaluating econometric models use of exploratory methods in economic analysis and model construction and evaluation when theoretical knowledge is scarce The data analysis by partial least squares prediction analysis of economic models and aggregation and disaggregation of nonlinear equations are also elaborated This text likewise covers the

comparison of econometric models by optimal control techniques role of time series analysis in econometric model evaluation and hypothesis testing in spectral regression Other topics include the relevance of laboratory experiments to testing resource allocation theory and token economy and animal models for the experimental analysis of economic behavior This publication is intended for students and researchers interested in evaluating econometric models Financial Econometrics Christian Gourieroux,Joann Jasiak,2018-06-05 Financial econometrics is a great success story in economics Econometrics uses data and statistical inference methods together with structural and descriptive modeling to address rigorous economic problems Its development within the world of finance is quite recent and has been paralleled by a fast expansion of financial markets and an increasing variety and complexity of financial products This has fueled the demand for people with advanced econometrics skills For professionals and advanced graduate students pursuing greater expertise in econometric modeling this is a superb guide to the field s frontier With the goal of providing information that is absolutely up to date essential in today s rapidly evolving financial environment Gourieroux and Jasiak focus on methods related to foregoing research and those modeling techniques that seem relevant to future advances They present a balanced synthesis of financial theory and statistical methodology Recognizing that any model is necessarily a simplified image of reality and that econometric methods must be adapted and applied on a case by case basis the authors employ a wide variety of data sampled at frequencies ranging from intraday to monthly These data comprise time series representing both the European and North American markets for stocks bonds and foreign currencies Practitioners are encouraged to keep a critical eye and are armed with graphical diagnostics to eradicate misspecification errors This authoritative state of the art reference text is ideal for upper level graduate students researchers and professionals seeking to update their skills and gain greater facility in using econometric models All will benefit from the emphasis on practical aspects of financial modeling and statistical inference Doctoral candidates will appreciate the inclusion of detailed mathematical derivations of the deeper results as well as the more advanced problems concerning high frequency data and risk control By establishing a link between practical questions and the answers provided by financial and statistical theory the book also addresses the needs of applied researchers employed by financial institutions Structural Econometric Models Eugene Choo,Matthew Shum,2013-12-18 This volume focuses on recent developments in the use of structural econometric models in empirical economics The first part looks at recent developments in the estimation of dynamic discrete choice models The second part looks at recent advances in the area empirical matching models A Practical Introduction to Econometric Methods Patrick K. Watson,Sonja S. Teelucksingh,2002 The text is aimed at final year undergraduate students or those at the graduate level doing econometrics for the first time It is an introductory course in the theory and practice of classical and modern econometric methods A proper study of the material will allow the reader to Understand the scope and limitations of classical and modern econometric techniques Read write and properly interpret articles and reports of an applied econometric nature Build upon

the elements of econometric theory and practice introduced in the book Although some basic knowledge of matrix algebra and elementary statistical theory will be assumed much of it is covered in the body of the text All the main theoretical concepts are illustrated with the use of econometric software mainly EViews
