Modern Linear and Nonlinear Econometrics Joseph Plasmans, 2006-08-30 The basic characteristic of Modern Linear and Nonlinear Econometrics is that it presents a unified approach of modern linear and nonlinear econometrics in a concise and intuitive way. It covers four major parts of modern econometrics: linear and nonlinear estimation and testing, time series analysis, models with categorical and limited dependent variables, and finally a thorough analysis of linear and nonlinear panel data modeling. Distinctive features of this handbook are: A unified approach of both linear and nonlinear econometrics with an integration of the theory and the practice in modern econometrics. Emphasis on sound theoretical and empirical relevance and intuition. Focus on econometric and statistical methods for the analysis of linear and nonlinear processes in economics and finance including computational methods and numerical tools. Completely worked out empirical illustrations are provided throughout the macroeconomic and microeconomic household and firm level data sets of which are available from the internet. These empirical illustrations are taken from finance e.g. CAPM and derivatives, international economics e.g. exchange rates, innovation economics e.g. patenting, business cycle analysis, monetary economics, housing economics, labor and educational economics e.g. demand for teachers according to gender, and many others. Exercises are added to the chapters with a focus on the interpretation of results. Several of these exercises involve the use of actual data that are typical for current empirical work and that are made available on the internet. What is also distinguishable in Modern Linear and Nonlinear Econometrics is that every major topic has a number of examples, exercises, or case studies. By this learning by

doing method the intention is to prepare the reader to be able to design develop and successfully finish his or her own research and or solve real world problems
