

The population of the United States is expected to grow over the next ten years at a rate of 0.1%. (In 1980, the rate was 2.2%.)<sup>1</sup>

Economic growth is simply the rise in workers and their productivity.

We need more workers, but 10,000 Americans are retiring every day.<sup>2</sup>

Corporations need to reinvest in productivity and the government should look at worthwhile infrastructure projects.

Growth from productivity leads to a higher standard of living. It is a goal everyone should strive to achieve. Unfortunately, growth in productivity has been slowing for decades.

U.S. corporations are holding around \$3 trillion overseas to avoid taxes. We need policy to encourage that money to be brought home.

The average age of retirement in the United States.<sup>3</sup> Many older Americans just don't have the health to productively work full-time.

Does Law Matter? Michael G. Faure, J. M. Smits, 2011 One of the most discussed questions in social science of the last decade is to what extent differences in economic development among countries can be explained by differing law and institutions According to the legal origins thesis the answer is clear it claims that differences in economic performance are to a large extent dependent on whether a country belongs to the civil law or common law family Others have severely criticised this thesis This volume takes stock of the debate and offers an integrated approach that not only takes into account the insights of economics but also of comparative law and empirics Page 4 of cover

*Economic Law as an Economic Good* Karl M. Meessen, Marc Bungenberg, Adelheid Puttler, 2009-07-29 Governments or at least the clever ones among them are aware of the factors guiding business activities In the course of adopting and enforcing economic legislation they seek to attract business activities in order to increase national income and fiscal revenues generate employment opportunities and very generally please voters Hence economic law may be considered an economic good as suggested by the title of this book That function which most rules of economic law have in the competition of systems was strengthened by the worldwide liberalization of trade Today it is of greater significance than ever before Lawyers and economists academics and practitioners from inside and outside Germany have taken a look at the facts and discussed approaches to conceptualizing them The resulting thirty essays collected in this volume contribute to the interpretation of existing and the making of new economic law

*The Second Law of Economics* Reiner Kümmel, 2011-06-24 Nothing happens in the world without energy conversion and entropy production These fundamental natural laws are familiar to most of us when applied to the evolution of stars biological processes or the working of an internal combustion engine but what about industrial economies and wealth production or their constant companion pollution Does economics conform to the First and the Second Law of Thermodynamics In this

important book Reiner K mmel takes us on a fascinating tour of these laws and their influence on natural technological and social evolution Analyzing economic growth in Germany Japan and the United States in light of technological constraints on capital labor and energy Professor K mmel upends conventional economic wisdom by showing that the productive power of energy far outweighs its small share of costs while for labor just the opposite is true Wealth creation by energy conversion is accompanied and limited by polluting emissions that are coupled to entropy production These facts constitute the Second Law of Economics They take on unprecedented importance in a world that is facing peak oil debt driven economic turmoil and threats from pollution and climate change They complement the First Law of Economics Wealth is allocated on markets and the legal framework determines the outcome By applying the First and Second Law we understand the true origins of wealth production the issues that imperil the goal of sustainable development and the technological options that are compatible both with this goal and with natural laws The critical role of energy and entropy in the productive sectors of the economy must be realized if we are to create a road map that avoids a Dark Age of shrinking natural resources environmental degradation and increasing social tensions
