Abstract

This research examines the effects of population growth on the economic development between the two developed and developing countries which is Singapore and Malaysia. They were many previous studies that have sought to gauge the effects or impact of population growth along the economic development. It was said that there was a strong relationship between the effects of population growth and the economic development, which is the growth of population is depending on the economic growth. Singapore was well known worldwide as a highly developed free-market economy. The economy of Singapore has been ranked as the most open in the world and the most-pro business. The population in the country is estimated at 5.5 million recently. As for Malaysia, it is known as the most competitive developing countries and is ranked on the 5th largest in South Asia. The population estimated at 31.63 million in Malaysia.

1. Introduction

The economists from the world have often neglected the impact of population dynamics on economic growth in the developing and developed countries. In [1] are among the few who explore the effect of the population dynamics on economic growth. They argue that it is possible that the interaction of economic growth with population dynamics can result in a poverty trap. Developing countries have not been able to achieve the predetermined development goals or have not been able to balance the achievement of development that has been done caused by the population problems or high population growth. It is also an uneven distribution of population high poverty and unemployment and has caused high burden of burden and low per capital income and dominance of primary goods [2].

According [3], the mortality rate decline aids economic growth and hence leads to an increase in the standard of living. As people live longer, they tend to think more about the future and are more likely to take risk and innovate. The developing countries that mortality decline has the tendency to raise educational attainment and savings rates and thus to increase investment in both physical and human capitals. The mortality decline has identified population growth, fertility and age-structural change as well as urban growth/urbanization as demographic factors that affect economic

growth. The impact of population dynamics of the various dimensions of the demographic transition on per capita, Gross Domestic Product (GDP) growth in developing and developed countries [4-6].

Besides that, others study claimed the developing countries that mortality decline has the tendency to raise educational attainment and savings rates and thus to increase investment in both physical and human capitals. Mortality decline is also accompanied by health gains that in turn enhance people's economic productivity. When population grows faster than GNP, the standard of living of the people does not improve. In fact, rapid population growth has been obstructing economic growth in developing countries [7].

In Table 1, we present population growth in India. It will be seen that since 1951, population has been growing at about two per cent or more. In other developing countries such as Pakistan Bangladesh, rate of population has been growing at about two per cent or more. In other developing countries such as Pakistan Bangladesh, rate of population has been greater than that of India. However, it may be noted that over-population and rapid the population rate is especially an Asian problem. The developing countries of Latin America and Africa do not face this population explosion problem. But for developing countries like India, population growth has to be checked if gains of development are not being nullified by it. It is worthwhile to note here that it is only China which has brought population growth rate quite will under control by adopting one

Demography - Volume I Zeng Yi, 2010-11-30 According to the classic and widely accepted statement by Hauser and Duncan 1959 2 demography is defined as the study of the size territorial distribution and components of population changes therein and components of such changes Almost all disciplines of social sciences and most disciplines of natural sciences deal with human beings in one way or another either directly or indirectly Furthermore demographic concepts e g birth rate death rate and migration and methods and analysis strategies e g life table analysis can be readily extended to other species insects animals plants etc and inanimate collectives enterprises automobiles etc Clearly demography is an important thematic field in science and it may provide the empirical foundation for studying human beings animals and inanimate collectives on which other relevant scientific research is built The volume aims to be of value to the various audiences of both non specialists and experts who seek a comprehensive understanding of issues related to human population As reviewed in the very beginning of the Theme Introduction interdisciplinary is one of the three major features of demography Given the rapid development in techniques for collecting not only demographic data but also other related data concerning health biomarkers genetics behaviors and social and natural environments in conventional population surveys as well as rapidly enhancing computing powers this volume shows and concludes that demography will be even more interdisciplinary in the coming decades A notable example is that the cross field marriage between bio medical sciences and

demography will lead us to enter an era in which bio medical and demographic methods will be well integrated As indicated by James R Carey and James W Vaupel in Chapter 13 of this volume the bio demographic branches of demography are vibrant areas of demographic research that are rapidly growing and that have great potential to enrich and enlarge the domain of demography Not only can demographers learn much from biologists and epidemiologists but demographers can contribute much to research on life in general and to research on population health The increasing availability of data sources and much enhanced computing internet power will also lead demography to be more interactive with the other fields such as psychology environmental science economics business and management etc As discussed in this volume s Chapter 11 by Swanson and Pol for example it is now possible to link conventional demographic data sources of census surveys and vital statistics with administrative records such as social security tax reporting medical insurance hospital records school registration supermarket purchasing cards use etc while protecting individuals privacy Such linkages will substantially increase the value of demographic methods surveys and administrative records for scientific research and policy analysis as well as the applicability of demography in business and governmental decision making processes

Population — Development — Environment J. Baguant, Wolfgang Lutz, C. Prinz, F.L. Toth, A.B. Wils, 2013-06-29 Because the number of options is often limited small island states tend to find it uncommonly difficult to strike a balance between population environment and development Relatively high population density and small land areas without much in the way of natural resources do not provide the best of circumstances for improving the living conditions of the population especially a fast growing one The result is often stunted economic development and environmental stress both on land and offshore The developments in the island state of Mauritius over the past 30 years however can serve as an inspiration and illustration of how extremely adverse conditions can be overcome In the early 1960s Mauritius was trying to cope with rapid population growth extreme poverty and grim economic prospects Population density was 324 inhabitants per km total fertility was 5.7 and GNP per capita was less than 200 In 1990 the situation in Mauritius was radically different Although population density had increased to 527 inhabitants per km total fertility had dropped to 2.0 and GNP per capita had increased to 2,310 Economic stagnation had been replaced by steady growth and full employment and environmental problems were being addressed as issues of high priority

The Routledge Handbook on Cities of the Global South Susan Parnell, Sophie Oldfield, 2014-03-26 The renaissance in urban theory draws directly from a fresh focus on the neglected realities of cities beyond the west and embraces the global south as the epicentre of urbanism This Handbook engages the complex ways in which cities of the global south and the global north are rapidly shifting the imperative for multiple genealogies of knowledge production as well as a diversity of empirical entry points to understand contemporary urban dynamics The Handbook works towards a geographical realignment in urban studies bringing into conversation a wide array of cities across the global south the ordinary mega global and peripheral With interdisciplinary contributions from a range of leading international experts it

profiles an emergent and geographically diverse body of work. The contributions draw on conflicting and divergent debates to open up discussion on the meaning of the city in or of the global south arguments that are fluid and increasingly contested geographically and conceptually. It reflects on critical urbanism the macro and micro scale forces that shape cities including ideological demographic and technological shifts and constantly changing global and regional economic dynamics. Working with southern reference points the chapters present themes in urban politics identity and environment in ways that re frame our thinking about cities. The Handbook engages the twenty first century city through a southern urban lens to stimulate scholarly professional and activist engagements with the city.

Beyond Territory and Scarcity Quentin Gausset, Michael Anthony Whyte, Torben Birch-Thomsen, 2005. In this volume ten anthropologists and geographers critically address traditional Malthusian discourses in essays that attempt to move beyond territory and scarcity.

Population and Development Robert Cassen, 1994-01-01. This volume presents the latest thinking concerning the effect of population growth on economic development and other areas of global concern. The authors address the complex issues that currently face both developed and developing country governments in all areas of population growth exploring impacts within their country and internationally.

Perspectives on Development and Population Growth in the Third World O.G. Simmons, 2012-12-06. Until the early to mid 1970s social scientists in the fields of population and development were largely going their own ways. Demographers relied almost exclusively on demographic transition theory as their paradigm for understanding the role of development in population change and fertility decline. Conversely most development economists and other specialists were certainly aware of the constraints placed upon development objectives by population growth. However the main development theories paid little attention to population and the implications of population growth for development. Indeed it was not until after the World Population Conference in Bucharest in 1974 that the interaction of population and development became a serious and positive theme for social scientific study. Accordingly since about the mid 1970s an extensive literature in the field of population and development has been generated. And in 1975 under the auspices of The Population Council the journal *Population and Development Review* was founded a journal which in the past decade has developed into the premier publication in the world for work in this area. But our understanding of development as it refers to change in Third World countries remained fragmented. Moreover our understanding of the linkages and interactions between population and development was very limited. It is in this regard that Ozzie Simmons's *Perspectives on Development and Population Growth in the Third World* will certainly have an impact.

Kelley,Steven W. Sinding,2001 The effect of demography on economic performance has been the subject of intense debate in economics for nearly two centuries In recent years opinion has swung between the Malthusian views of Coale and Hoover and the cornucopian views of Julian Simon Unfortunately until recently data were too weak and analytical models too limited to provide clear insights into the relationship As a result economists as a group have not been clear or conclusive This volume which is based on a collection of papers that heavily rely on data from the 1980s and 1990s and on new analytical approaches sheds important new light on demographic economic relationships and it provides clearer policy conclusions than any recent work on the subject In particular evidence from developing countries throughout the world shows a pattern in recent decades that was not evident earlier countries with higher rates of population growth have tended to see less economic growth An analysis of the role of demography in the Asian economic miracle strongly suggests that changes in age structures resulting from declining fertility create a one time demographic gift or window of opportunity when the working age population has relatively few dependants of either young or old age to support Countries which recognize and seize on this opportunity can as the Asian tigers did realize healthy bursts in economic output But such results are by no means assured only for countries with otherwise sound economic policies will the window of opportunity yield such dramatic results Finally

several of the studies demonstrate the likelihood of a causal relationship between high fertility and poverty While the direction of causality is not always clear and very likely is reciprocal poverty contributes to high fertility and high fertility reinforces poverty the studies support the view that lower fertility at the country level helps create a path out of poverty for many families Population Matters represents an important further step in our understanding of the contribution of population change to economic performance As such it will be a useful volume for policymakers both in developing countries and in international development agencies
