## **Economics And The Philosophy Of Science:**

The Philosophy of Science and Economics Robert A. Solo, 2016-09-16 The philosophy of science proposes criteria to delineate true science and a theory to explain its progress As a graduate student under the supervision of Lionel Robbins and Karl Popper Solo first challenged the viability of those criteria and that theory in relation to economics and the social sciences Here he explains how the foundations of that philosophy have been eroded through the advent of quantum mechanics and through Kuhn's Structures of Scientific Revolution and demonstrates its irrelevance to a social science that would comprehend social reality and contribute to the formation of social policy He proposes a different mode of perception and different rules for determining the acceptability of statement a different language of discourse and a different structure of organization than presently prevails

**Economics in Philosophy of Science** Christoph Lütge,2010 This paper draws a connection between recent developments in naturalized philosophy of science and the Buchanan research program in economics Economic approaches in naturalized philosophy of science can be combined to form an economic philosophy of science After giving an overview of some of these approaches I lay out the fundamentals of the Buchanan research program I argue that its main elements are a theory of interactions and a normative foundation in consensus which help to answer some important criticisms of economic philosophy of science

**Structure, Evidence, and Heuristic** Armin W. Schulz,2020-04-22 This book is the first systematic treatment of the philosophy of science underlying evolutionary economics It does not advocate an evolutionary approach towards economics but rather assesses the epistemic value of appealing to evolutionary biology in economics more generally The author divides work in evolutionary economics into three distinct albeit related forms a structural form an evidential form and a heuristic form He then analyzes five examples of work in evolutionary economics falling under these three forms For the structural form he examines the parallelism between natural selection and economic decision making and the parallelism between natural selection and market competition For the evidential form he looks at the relationship between animal and human economic decision making and the evolutionary explanation of diversity in human economic decision making Finally for the heuristic form he focuses on the plausibility of equilibrium modeling in evolutionary ecology and economics In this way he shows that linking evolutionary biology and economics can make for a powerful methodological tool that can enable progress in our understanding of various economics questions Structure Evidence and Heuristic will be of interest to scholars and advanced students working in philosophy of science philosophy of social science evolutionary biology and economics

*Economic Philosophies* Alessandro Roselli, 2020-12-04 The book shows the ideological underpinning of the economist's work and the ideological perspectives are those that have largely prevailed in the last couple of centuries liberalism nationalism and socialism It is on the ground and strength of these ideologies that systems of political economy have been built Roselli explores the connections between theory and value judgements to identify the philosophical premises behind the economic reasoning of economists as diverse as Smith Ricardo Marx Pareto Keynes Hayek among others Liberalism originally leaned towards an unhindered laissez faire then towards a wider role of the State in the economic system under the influence of socialist ideology then again it has relied on an individualistic approach to issues of wealth production and distribution more recently the unreliability of this approach has been revealed by systemic crises suggesting new reflections and uncertainties about the coherence of economic reasoning with the liberal idea an institutional and historical perspective may open new spaces to the understanding of a liberal and capitalistic economy The vicissitudes of economic nationalism its statist and protectionist features its decline and recent resurgence are examined being unclear what shape it is currently taking from an economic and political viewpoint This is particularly obscure in the case of that specific form of nationalism called populism The decline and fall of Marx's historical materialism cannot hide the inherent contrast of interest between the two sides of a labour contract The lasting legacy of socialism is the enduring and multiform relevance from a cowed labour force to environmental issues of social themes in modern economies **Falsification in Economics. **Popper's Philosophy of Science Applicable to Economic Research?** Simon Valentin, 2016-05-04 Seminar paper from the year 2016 in the subject Economics Other grade 1.7 University of Kassel Institut für Volkswirtschaftslehre IVWL course Philosophy of Economics language English abstract The question I want to examine in this paper is if and how falsification as a method and Popper's philosophy of science in general is appropriate for and applicable to economic research To begin with I will start with a short introduction about Karl Popper and his philosophy Then I will explain and evaluate the concept of falsification with its strengths and weaknesses and its use for science in general Afterwards I will examine the influence and actual usage of falsification in economics in general to finally evaluate the chances and limits of the concept in this area of science It is often said that a significant characteristic of economic research is the strong staying power of theories even with contradicting empirical evidence Moreover the scientific character of economic science is often questioned In this context economic research is criticised for a lack of falsification or even a lack of falsifiability But is it true and what does this mean

The concept of falsification as a deductive method was brought up and made popular by the Austro British philosopher Karl Popper in the 1930s In contrast to the idea of gaining truth or principles through a lot of empiric observations inductive method he claimed that it is logically only possible to refute general statements by empirical observations Consequently Popper advocates for a method of research through trial and error Science should use the method of falsification and for him the use of it is the demarcation criterion between science and non science Karl Popper s methodological writings have been a cause of debate since the 1930s This scientific method is nowadays established particularly in natural sciences where you can tell more easily if a theory is wrong than in other disciplines Economic research is part of the second group of disciplines where we often find huge differences between Popper s prescriptions and the common practice and where normative statements are often part of all considerations

**The Inexact and Separate Science of Economics** Daniel M. Hausman, 2023-06-08 Is economics a science What distinguishes it from other sciences both natural and social Like many of the natural sciences its theories are mathematically complex Yet like the social sciences its laws are largely everyday generalizations Can such generalizations which are far from universal truths constitute a science Does economics have a distinctive method The first edition answered these and other questions about the scientific status of economics and its underlying methodology In this fully updated new edition Dan Hausman reflects on developments in both economics and the philosophy of economics over the last thirty years It includes a new chapter on the methodology of macroeconomics an updated discussion on the use of models and new discussions causal inference and behavioural economics and their implications for theory appraisal It is the perfect choice for a new generation of students studying the methodology of modern economics

**The Job Market of the Future** James Cooke Brown, 2001 *Economics, Rational Choice and Normative Philosophy* Thomas Boylan, Ruvin Gekker, 2008-10-27 Following Amartya Sen s insistence to expand the framework of rational choice theory by taking into account non utility information economists political scientists and philosophers have recently concentrated their efforts in analysing the issues related to rights freedom diversity intentions and equality Thomas Boylan and Ruvin Gekker have gathered essays that reflect this trend The particular themes addressed in this volume include the measurement of diversity and freedom formal analysis of individual rights and intentions judgment aggregation under constraints and strategic manipulation in fuzzy environments Some papers in the volume also deal with philosophical aspects of normative social choice

*Explorations in Economic Methodology* Roger E. Backhouse, 2006-10-19 Roger Backhouse is a key figure in the field of economic methodology Explorations in Economic Methodology both clarifies and responds to the issues raised by the literature and argues that methodology is an essential activity Offering a constructive but critical response to the recent literature this collection provides important new insights for students and researchers in economic methodology and the philosophy of science

The Economy of the Earth Mark Sagoff, 2007-12-03 Mark Sagoff draws on the last twenty years of debate over the foundations of environmentalism in this comprehensive revision of The Economy of the

Earth Posing questions pertinent to consumption cost benefit analysis the normative implications of neo Darwinism the role of the natural in national history and the centrality of the concept of place in environmental ethics he analyses social policy in relation to the environment pollution the workplace and public safety and health Sagoff distinguishes ethical from economic questions and explains which kinds of concepts arguments and processes are appropriate to each He offers a critique preference and willingness to pay as measures of value in environmental economics and defends political cultural aesthetic and ethical reasons to protect the natural environment
