Economics of Poverty, Environment and Natural-Resource Use Rob B. Dellink, Arjan Ruijs, 2008-03-25 Reduction of poverty is a tremendous and persistent challenge for the global community Given that the livelihood of millions is at stake there is an urgent need to reconsider the causes of and the remedies for poverty Poverty and its reduction are closely linked to the natural resources base The quality and bounty of the local environment certainly affect living conditions of the poor and their poverty is often seen as a contributing factor to the degraded condition of the local environment Teasing apart the direction of causality in this resource poverty nexus is a serious empirical challenge This book contributes to an improved understanding of the economic dimensions of environmental and natural resource management and poverty alleviation The ten chapters of the book offer an overview of the current knowledge concerning the relation between poverty environment and natural resource use Three sides of the debate receive particular attention First the relation between resource use and poverty is discussed from a theoretical point of view Second it is questioned whether payments for environmental services or considering values of resources can be an effective tool for stimulating both sustainable resource use and poverty alleviation Third alternative strategies to break the land degradation poverty cycle are discussed

Economics of Natural Ressource Development in the West Western Agricultural Economics Research Council. Committee on the Economics of Natural Resources Development, 1973 *Sustainable Resource Use* Alex Smajgl, Silva Larson, 2012 The way that humans organize both resource access and resource use is vital to the management of natural resources Within different contexts institutional arrangements such as the rules of common and private property rights become levers by which human behaviours can be modified and steered towards the goals of sustainable natural resource management Featuring contributions from leading thinkers in the field this groundbreaking volume examines institutional dynamics from the perspective of natural resource management The book is organized into four parts The first discusses institutional diversity and contextual change Following this institutional misfit is analysed with a strong focus on the long term impacts of colonial structures in the Asia Pacific region The book then discusses experiences with institutional dynamics in order to ease the

tension of such misfits before examining future research needs Ultimately through careful argument and by deploying original research the authors make the case that institutional arrangements cannot be perceived as a set of parameters that can be optimized and locked in for the most efficient functioning of a system nor can institutions be evaluated outside the context in which they were developed This is powerful thought provoking and important reading for academics researchers policy makers and professionals in resource institutional and environmental economics and land use planning and policy across the full range of natural resource sectors from forestry to agriculture Published with CSIRO Cover image Blue Flower of Life c Theresa J Richardson 2006 Economics of Natural Resources and the Environment David W. Pearce, R. Kerry Turner, 1989-12-01 Economics of Natural Resources and the Environment brings together the approaches of natural resource economics and environmental economics to provide a comprehensive overview of the economics of national international and global environmental problems A unifying theme throughout the book is the concept of sustainable development defined as maximizing the net benefits of economic development while maintaining the services and quality of natural resources over time The authors emphasize the continuing importance of a mainstream approach They stress economic efficiency getting the most welfare out of a given endowment of resources And they address the larger moral issues as well Chapter topics include the historical development of environmental economics environmental ethics and pollution control policy in free mixed market and centrally planned economies Other current issues seen from an economic perspective include destruction of the ozone layer the greenhouse effect policy weapons in the fight against pollution and the special problems of the third world Economics of Natural Resources and the Environment offers a thorough review and synthesis of the major work of the field s senior scholars It will be of value not only to students of natural resource economics environmental economics geography and environmental sciences but also to all with an interest in economic approaches to environmental issues

codifies the relationships among the three subdisciplines energy economics resource economics and environmental economics Understanding these relationships just became simpler Nobel Prize Winning Editor in Chief joint recipient 2007 Peace Prize Jason Shogren has demonstrated excellent team work again by coordinating and steering his Editorial Board to produce a cohesive work that guides the user seamlessly through the diverse topics This work contains in equal parts information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government *Economics of Natural & Environmental Resources (Routledge Revivals)* Vernon Smith, 2013-08-15 First written in 1977 Economics of Natural and Environmental Resources presents a collection of articles written in exploration of the economic social and ecological problems peculiar to natural and environmental resources Whilst focusing on the economic theory of natural resources the contributions also consider geological technological and institutional features of particular resources Policy implications and considerations are central to the text and although the book was published over thirty years ago the issues discussed remain relevant to today's society **Decoupling Natural Resource Use and Environmental Impacts from Economic Growth** United Nations Environment Programme. International Resource Panel, 2011 By 2050 humanity could devour an estimated 140 billion tons of minerals ores fossil fuels and biomass per year three times its current appetite unless the economic growth rate is decoupled from the rate of natural resource consumption Developed countries citizens consume an average of 16 tons of those four key resources per capita ranging up to 40 or more tons per person in some developed countries By comparison the average person in India today consumes four tons per year With the growth of both population and prosperity especially in developing countries the prospect of much higher resource consumption levels is far beyond what is likely sustainable if realised at all given finite world resources warns this report by UNEP's International Resource Panel Already the world is running out of cheap and high quality sources of some essential materials such as oil copper and gold the supplies of which in turn require ever rising volumes of fossil fuels and freshwater to produce Improving the rate of resource productivity doing more with less faster than the economic growth rate is the notion behind decoupling the panel says That goal however demands an urgent rethink of the links between resource use and economic prosperity buttressed by a massive investment in technological financial and social innovation to at least freeze per capita consumption in wealthy countries and help developing nations follow a more sustainable path *The Economics Of Environmental And Natural Resources Policy* J.
