## **The Physics of Laser**

**Radiation-Matter Interaction** Alexander Horn, 2022-11-20 This textbook explains the fundamental processes involved in the interaction of electromagnetic radiation with matter. It leads students from a general discussion of electrodynamics forming the mathematical foundation for the Maxwell equations to key results such as the Fresnel equations, Snell's law and the Brewster angle, deriving along the way the equations for accelerated charges and discussing dipole radiation, Bremsstrahlung and synchrotron radiation. By considering more and more interacting particles, the book advances its treatment of the subject, approaching the solid state regime using both classical and quantum mechanical approaches to describe interaction paths with electromagnetic radiation. Finally, specific interactions of laser radiation with matter are explained, such as ultrafast coherent and selective interaction. With an emphasis on achieving an intuitive grasp of the basic physics underlying common laser technology, this textbook is ideal for graduate students seeking both a better fundamental and applied understanding of laser-matter interaction.

## **Directed Energy**

**Weapons** Bahman Zohuri, 2016-08-29 This book delves deeply into the real-world technologies behind the directed energy weapons that many believe exist only within the confines of science fiction. On the contrary, directed energy weapons such as high energy lasers are very real, and this book provides a crash course in all the physical and mathematical concepts that make these weapons a reality. Written to serve both scientists researching the physical phenomena of laser effects as well as engineers focusing on practical applications, the author provides worked examples demonstrating issues such as how to solve for the heat diffusion equation for different boundary and initial conditions. Several sections are devoted to reviewing and dealing with solutions of diffusion equations utilizing the aid of the integral transform techniques. Ultimately, this book examines the state of the art in currently available high energy laser technologies and suggests future directions for accelerating practical applications in the field.

**High Energy Laser (Hel)** Bahman Zohuri, 2014-11-22 Directed Energy Weapons is nothing new to mankind; historically, the origination of such weapons falls in centuries ago when first time the famous Greek mathematician, physicist, engineer, inventor, and astronomer Archimedes of Syracuse used different mirrors to collect sunbeams and focusing them on the Roman fleet in order to destroy enemy ships with fire. This is known as the Archimedes Heat Ray. Archimedes may have used mirrors acting collectively as a parabolic reflector to burn ships attacking Syracuse. The device was used to focus sunlight onto approaching ships, causing them to catch fire. Of course, the myth or reality of Archimedes' Heat Ray is still a questionable story, but certain experiments with the help of a group of students from the Massachusetts Institute of Technology was carried out with 127 one-foot square mirror tiles in October of 2005 that was focused on a mock-up wooden ship at a range of around 100 feet (30 m). The flames broke out on a patch of the ship but only after the sky had been cloudless and the ship had remained stationary for around ten minutes. It was concluded that

device was a feasible weapon under these conditions

**Laser Growth and Processing of Photonic Devices** Nikolaos A Vainos, 2012-07-10 The use of lasers in the processing of electronic and photonic material is becoming increasingly widespread with technological advances reducing costs and increasing both the quality and range of novel devices which can be produced Laser growth and processing of photonic devices is the first book to review this increasingly important field Part one investigates laser induced growth of materials and surface structures with pulsed laser deposition techniques the formation of nanocones and the fabrication of periodic photonic microstructures explored in detail Laser induced three dimensional micro and nano structuring are the focus of part two Exploration of multiphoton lithography processing and fabrication is followed by consideration of laser based micro and nano fabrication laser induced soft matter organization and microstructuring and laser assisted polymer joining methods The book concludes in part three with an investigation into laser fabrication and manipulation of photonic structures and devices Laser seeding and thermal processing of glass with nanoscale resolution laser induced refractive index manipulation and the thermal writing of photonic devices in glass and polymers are all considered With its distinguished editor and international team of expert contributors Laser growth and processing of photonic devices is an essential tool for all materials scientists engineers and researchers in the microelectronics industry The first book to review the increasingly important field of laser growth and processing of photonic devices Investigates laser induced growth of materials and surface structures pulsed laser deposition techniques the formation of nanocones and the fabrication of periodic photonic microstructures Examines laser induced three dimensional micro and nano structuring and concludes with an investigation into laser fabrication and manipulation of photonic structures and devices

**Laser Ignition of Energetic Materials** S Rafi Ahmad, Michael Cartwright, 2014-08-27 The book gives an introduction to energetic materials and lasers properties of such materials and the current methods for initiating energetic materials The following chapters and sections highlight the properties of lasers and safety aspects of their application It covers the properties of in service energetic materials and also materials with prospects of being used as insensitive ammunitions in future weapon or missiles systems or as detonators in civilian mining applications Because of the diversity of the topics some sections will naturally separate into different levels of expertise and knowledge
