## **Electrical Phenomena In The Heart:**

**Electrical Phenomena in the Heart** Walmor C. De Mello, 2013-10-22 *Electrical Phenomena in the Heart* is a collection of articles that deals with cell physiology and biophysics as applicable to the heart. The book discusses the ultrastructure of heart cells, molecular arrangement of heart cell membranes and the mechanism involved in sealing and excitation-contraction coupling. The selection describes electrophysiological studies made of embryonic heart cells to understand electrical activity, automaticity, enzyme activities and the development of intracellular tubular systems. The text also discusses the mechanism of excitation spread between active and inactive cells. The book analyzes the structure of biological membranes and the effect of proteins on membrane potential and on the excitability process. One paper reviews the excitation process of heart cells that includes the use of a voltage clamp in cardiac preparations as well as the role of the pacemaker. One paper examines the repolarization process involved in cardiac muscle involving the ionic composition and the kinetic properties of membrane currents as well as the action of some drugs. The book also describes the healing process in cardiac and other muscle fibers when the heart muscle is injured. The text explains that damage to other cardiac muscle can result because of a sealing process that occurs at or near the injured site. The book also explains the model for controlling sarcoplasmic calcium concentration on a single sarcomere level in a mammalian heart. The text can prove significant to students learning heart physiology and biophysics, heart surgeons and bio-physiologists involved in cellular research. **ELECTRICAL PHENOMENA IN THE HEART.** 1972 ED DE MELLO, An Interpretation of Bio-electric Phenomena Associated with the Heart on the

## **Physiology and Pathophysiology of the Heart** Nicholas

Sperelakis, 2013-06-29 could go on for several pages. Thus the book edited by Sperelakis is a potent reminder of the almost total rift between clinical and investigative cardiology. The fact that cardiology has two sites inextricably has widened because of the overwhelming development of new clinical procedures both diagnostic and therapeutic. Almost forgotten is the fact that Sperelakis has pioneered ultrastructure of heart muscle. We owe most of the clinical advances to theoretical electrophysiology, cardiac contractility and ion exchange and experimental observations. I need not remind you of the importance of these subjects. The chapter by the reader of the work of Carrel who performed the dealing with fundamental topics of the coronary circulation, the first experimental coronary bypass in 1902 or the culmination work of the brothers Curie in 1880, both physicists. This book is indeed a timely reminder of the importance of the fundamental aspects of cardiology. The radiography of the works of Langley who introduced the concept of receptors, the work of Ahlquist in 1946, result in a sterile and unproductive future for a field who first differentiated between alpha and beta receptors that has made such stunning advances during the development of

Fleckenstein a physiologist who pi last thirty years to the benefit of millions of people      Electrical Diseases of the Heart Ihor Gussak,A. A. M. Wilde,P. A. Friedman,Charles Antzelevitch,M. J. Ackerman,W.-K. Shen,2008-09-08 This book provides a unique contemporary and succinct distillation of the current status of recently delineated electrical diseases of the heart emphasizing their common and diverse clinical features The latest developments in the field of experimental and clinical cardiac electrophysiology genetics pharmacology and interventional therapies of various clinical arrhythmogenic entities are featured and discussed in terms of recent advances in basic and clinical science The book is divided into seven major parts Each part consists of chapters total of 64 dealing with related topics      **Heart Cell Communication in Health and Disease** Walmor C. de Mello,Michiel J. Janse,2012-12-06 In Heart Cell Communication in Health and Disease an extensive review of different aspects of heart cell communication is presented The book starts with the fundamental concept that cardiac cells are communicated and then proceeds to the role of gap junctions in heart development the molecular biology of gap junctions the biophysics of the intercellular channels the control of junctional conductance and the influence of gap junctions on impulse propagation This is the first time that a single volume has described cell communication in the normal heart and under different pathological conditions such as heart failure coronary disease myocardial ischemia and cardiac arrhythmias In this way the process of cell communication is analyzed at different levels of complexity providing the reader with a wide view of this field and its relevance to cardiology      **The Beating Heart** Robin Choudhury,2024-10-10 In The Beating Heart Robin Choudhury explores how the heart has been represented over time and across cultures He investigates the interplay between the heart depictions of successive eras and the prevailing cultural discourse religious social philosophical of each In parallel he considers how the scientific understanding of the function of the heart has unfolded over 2 500 years from the observations of Aristotle through detailed anatomical descriptions beginning in the Renaissance to the emergence of experimental physiology in the seventeenth century culminating in the twentieth in full understanding of the molecular and cellular processes by which the heart beats autonomously The Beating Heart is a beautifully illustrated journey of discovery across four millennia of human history in the company of an author whose medical knowledge of the heart is matched by his fascination with the visual arts      *Special physiology of organs* John Gray McKendrick,1889      **A Text Book of Physiology: Special physiology** John Gray McKendrick,1889      *Post-graduate* ,1909      **The Post-Graduate** ,1909      **Waking the Power Within Thermodynamics and the Human Battery** Professor ibrahim elnoshokaty , The sci fi film The Matrix introduces a fascinating premise where humans function as energy sources for an advanced machine society In this fictional world human bodies are maintained in a state of suspended animation while their minds exist in a virtual reality allowing machines to extract their bioelectric thermal and kinetic energy This article investigates the scientific feasibility of utilizing humans as a power source by applying thermodynamic principles According to the first law of thermodynamics the energy required to sustain human life would result in a net energy loss for the

machines The second law indicates that the system's entropy would rise rendering it an inefficient energy strategy Furthermore the energy output of a human body even if fully utilized would be inadequate to meet the machines energy demands More efficient alternatives for the machines would include other biological power sources and energy harvesting techniques such as solar or nuclear power The article concludes that while the concept of human batteries serves as an engaging storytelling element it is not a scientifically viable solution for the machines energy requirements The machines choice to preserve human life may be motivated by other factors such as leveraging their collective cognitive abilities for computational purposes or adhering to an ethical code that prohibits the complete annihilation of humanity This investigation aims to fill the gap by providing a detailed thermodynamic analysis of the energy expenditure required to sustain human life in a suspended animation state and the inefficiency of this system as an energy source for machines a facet previously unexplored By elucidating the thermodynamic constraints of human based energy sources this study not only challenges a popular sci fi narrative but also enriches our understanding of bioenergetic processes and their implications for future energy harvesting technologies
