Gilardi, 2009-01-01 It is thanks to works like this one that we can make progress in the understanding of the phenomenon of independent regulatory authorities in Europe and elsewhere. Competition and Regulation in Network Industries. When scholars and practitioners want to understand regulation in Europe, this book should be the first place they will turn. Combining innovative data, smart statistical analysis, and an in-depth knowledge of regulatory agencies and processes across a wide range of countries, Gilardi has produced an essential study of regulation and a stellar piece of scholarship. Charles Shipan, University of Michigan, US. This is a crucial, important book for the study of independent regulatory agencies, an increasingly prevalent institution at the heart of the governance of markets. Gilardi offers an excellent quantitative analysis of the spread of such agencies. He presents a remarkable dataset and rigorously tests different explanations. His coverage is wide, and his methods are first class. His conclusions will interest all scholars who work on the regulatory state. Mark Thatcher, London School of Economics, UK. Regulatory agencies are an important aspect of the contemporary regulatory state. Drawing on an extensive body of comparative analysis, Fabrizio Gilardi's book provides a serious contribution that moves the literature forward. This book deserves to be considered carefully. Martin Lodge, London School of Economics, UK. Fabrizio Gilardi's book is empirical political science of the regulatory state at its best. It has data of transnational breadth and depth that is diagnosed in a theoretically sophisticated way. The conclusion is that policymakers delegate in order to tighten the credibility of policy commitments and to tie the hands of future ministers who may have different preferences. This will become a building block for future scholarship on regulation and governance. John Braithwaite, Australian National University. During the past 25 years, independent regulatory agencies have become widespread institutions for regulatory governance. This book studies how they have diffused across Europe and compares their formal independence in 17 countries and seven sectors. Through a series of quantitative analyses, it finds that governments tend to be more prone to delegate powers to independent regulators when they need to increase the credibility of their regulatory commitments and when they attempt to tie the hands of their successors. The institutional context also matters: political institutions that make policy change more difficult are functional equivalents of delegation. In addition to these factors, emulation has driven the diffusion of independent regulators, which have become socially valued institutions that help policymakers legitimize their actions and may even have become taken for granted as the appropriate way to organize regulatory policies. Providing a broad comparison of independent regulatory agencies in Europe, *Delegation in the Regulatory State* will be of great interest to researchers and students in political science, public policy, and public administration. *Transnational Politics of the Environment*. Liliana B. Andonova, 2003-11-21. A study of the effect of EU membership on Central and Eastern European environmental policy and the interplay of political incentives and industry behavior that determines policy. In *Transnational Politics of the Environment*, Liliana Andonova examines the effect of the European Union (EU) on the environmental policies of Bulgaria, the Czech Republic, and Poland. Compliance with EU environmental regulations is especially onerous for Central and

Eastern European countries because of the costs involved and the legacy of pollution from communist era industries But Andonova argues that EU integration has a positive impact on environmental policies in these countries by exerting a strong influence on the environmental interests of regulated industries With her empirical study of chemical safety and air pollution policies from 1990 to 2000 she shows that export competitive industries such as the chemical industry that would benefit from economic integration have an incentive to adopt EU norms By contrast industries such as electric utilities that primarily serve the domestic market remain opposed to EU environmental standards and must be prodded by their own governments to implement environmental protection measures These differences in domestic interests greatly influence the course of reforms and the adoption of EU standards Transnational Politics of the Environment challenges the current focus on intergovernmental cooperation between East and West by highlighting the roles of industries transnational norms and domestic institutions in promoting change in environmental regulation It offers a generalizable framework for understanding the politics of environmental regulation in emerging market economies and helps bridge the divide between the study of domestic and international environmental politics
