Transport and Interactions of Chlorides in Cement-based Materials Caijun Shi, Qiang Yuan, Fuqiang He, Xiang Hu, 2019-07-26 Chloride induced corrosion is the most important durability issue of reinforced concrete structures and the prediction and prevention of chloride induced corrosion has attracted considerable interest all over the world Given that chloride penetrates through the concrete cover the issues concerning its transport are crucial These include testing methods prediction and the prevention of ingress During the transport process physical and chemical interaction occurs between chloride and cement hydrates which in turn affects the further transport so the transport of chloride and these interactions are closely related and underpin our understanding of chloride induced corrosion in RC structures This book provides in depth discussion of chloride transport and its interaction in cement based materials and reviews and summarizes the state of

the art The mechanisms and testing methods for chloride transport chemical interactions of chloride with cement hydrates chloride binding isotherms measurement of penetration depths factors affecting chloride transport and modeling of chloride transport are discussed in detail This book serves as a reference for researchers or engineer and a textbook for graduate students

Comprehensive Nuclear Materials ,2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation

Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific

Alexander,Hans-Dieter Beushausen, Frank Dehn, Pilate Moyo, 2008-11-13 The Second International Conference on Concrete
Repair Rehabilitation and Retrofitting ICCRRR 2005 was held in Cape Town South Africa from 24-26 November 2008 The
Conference followed the very successful First International Conference also in Cape Town in 2005 and continued as a
collaborative venture by researchers from the South African Research Programme in Concrete Materials based at the
Universities of Cape Town and The Witwatersrand and The Construction Materials Sections at Leipzig University and MFPA
Leipzig in Germany The background in industry and the state of national infrastructures continues to be highly challenging
and demanding The facts remain that much of our concrete infrastructure deteriorates at unacceptable rates that we need
appropriate tools and techniques to undertake the vast task of sound repair maintenance and rehabilitation of such
infrastructure and that all this must be undertaken with due cognisance of the limited budgets available for such work New
ways need to be found to extend the useful life of concrete structures cost effectively Confidence in concrete as a viable
construction material into the 21st century needs to be retained and sustained particularly considering the environmental
challenges that the industry and society now face The conference proceedings contain papers presented at the conference
and classified into a total of 12 sub themes which can be grouped under the three main themes of i Concrete durability
aspects ii Condition assessment of concrete structures and iii Concrete repair rehabilitation and retrofitting The major
interests in terms of submissions exists in the fields of innovative materials for durable concrete construction integrated
service life modelling of reinforced concrete structures NDE NDT and measurement techniques repair methods and materials
and structural strengthening and retrofitting techniques The large number of high quality papers presented and the wide
range of relevant topics covered confirm that these proceedings will be a valued reference for many working in the important
fields of concrete durability and repair and that they will form a suitable base for discussion and provide suggestions for
