Evidence Based Oncology:

Evidence-Based Oncology Christopher B. Williams, 2008-04-15 This is a book about using the best evidence to inform treatment decisions for people with cancer. It is written by oncologists for oncologists using examples throughout to illustrate key points. The book starts off with a toolbox section written in a way which will help those relatively new to the principles of evidence based oncology to understand the key issues and equip them with the basics of how to tell a good study from a bad one. The majority of the book then deals with an evidence based summary of the common and important cancers in a structured and easy to read format around common patient scenarios and frequently asked questions. Whilst most of the evidence is based on randomised controlled trials other studies are cited where appropriate eg when discussing adverse events. The unique accompanying book website will contain updates of new chapters and studies as they become available. Written by leading world figures in the evidence based movement. Includes free CD ROM with PC eBook and sample PDA chapter. Methodology of reviewing and appraising evidence discussed in the context of cancer management. Clinical sections covering prevention and screening. Chapters on treatment of the individual major cancers review the current best available evidence to most frequently asked questions. Rigorously structured explicit searches of evidence of efficacy and harms plus comment around clinical scenarios. Cassel, Rosanne Leipzig, Harvey Jay Cohen, Eric B. Larson, Diane E.

Meier, 2006-05-29 Since the publication of the third edition of *Geriatric Medicine* extraordinary advances have occurred in the science of aging and the potential for biomedical research to give us answers to many if not most of the age related disorders that threaten the quality of life in older years At the most basic level the successful mapping of the human genome was declared complete in the fall of 2000 Understanding the map of the human genome is as important as understanding the map of genomes of important laboratory species ranging from the microscopic worms and fruit flies used in most classic genetic studies to rodents such as laboratory mice and eventually to primates on which much of the research on the aging human brain is done The genetic maps of all of these species including our own does not answer clinical questions but it does

open the door to dramatic rapid and efficient answers to questions about the genetic polymorphisms related to diseases in humans The telomerase story also unfolded since the third edition Telomerase is an enzyme responsible for maintaining the telomeres the redundant DNA portions at the end of chromosomes whose shortening seems to be linked directly to cell senescence apoptosis and the control over cell death which at the level of the individual cell seems to be linked to the decline of organ function and eventually aging and death within the organism

Cancer Disparities Ronit Elk, 2012 There has been remarkable progress in understanding preventing detecting diagnosing and treating cancer resulting in a reduction of cancer incidence and mortality in the United States Despite this the cancer burden varies considerably by race ethnicity and socioeconomic status Cancer incidence rates vary markedly between racial ethnic groups but even more startling are the differences in outcome across groups Cancer Disparities Causes and Evidence Based Solutions helps readers understand the scope and causes of this inequity by providing a detailed analysis of the many factors that result in cancer disparities across the cancer continuum including the role of race ethnicity socioeconomic status access to and use of services insurance status geographic variables and differences in treatment provided to patients Further it is the first book to describe evidence based concrete solutions that can be used to reduce or even eliminate cancer health disparities Fifteen previously unpublished studies of interventions designed specifically to achieve health equality are described These studies focus on contextually and culturally appropriate strategies to enhance cancer prevention screening and early detection treatment symptom management and quality of life in underserved populations

Advancing the Science of Implementation across the Cancer Continuum David A. Chambers, Cynthia A. Vinson, Wynne E. Norton, 2018-10-03 While many effective interventions have been developed with the potential to significantly reduce morbidity and mortality from cancer they are of no benefit to the health of populations if they cannot be delivered In response to this challenge *Advancing the Science of Implementation across the Cancer Continuum* provides an overview of research that can improve the delivery of evidence based interventions in cancer prevention early detection treatment and survivorship Chapters explore the field of implementation science and its application to practice a broad synthesis of relevant research and case studies illustrating each cancer focused topic area and emerging issues at the intersection of research and practice in cancer Both comprehensive and accessible this book is an ideal resource for researchers clinical and public health practitioners medical and public health students and health policymakers

Muir Gray,2013-01-11 How eliminating risk illiteracy among doctors and patients will lead to better health care decision making Contrary to popular opinion one of the main problems in providing uniformly excellent health care is not lack of money but lack of knowledge on the part of both doctors and patients The studies in this book show that many doctors and most patients do not understand the available medical evidence Both patients and doctors are risk illiterate frequently unable to tell the difference between actual risk and relative risk Further unwarranted disparity in treatment decisions is the rule rather than the exception in the United States and Europe All of this contributes to much wasted spending in health care The contributors to *Better Doctors Better Patients Better Decisions* investigate the roots of the problem from the emphasis in medical research on technology and blockbuster drugs to the lack of education for both doctors and patients They call for a new more enlightened health care with better medical education journals that report study outcomes completely and transparently and patients in control of their personal medical records not afraid of statistics but able to use them to make informed decisions about their treatments **The Ethics of Biomedical Big Data** Brent Daniel Mittelstadt,Luciano Floridi,2016-08-03 This book presents cutting edge research on the new ethical challenges posed by biomedical Big Data technologies and practices Biomedical Big Data refers to the analysis of aggregated very large datasets to improve medical knowledge and clinical care The book describes the ethical problems posed by aggregation of biomedical datasets and re use re purposing of data in areas such as privacy consent professionalism power relationships and ethical governance of Big Data platforms Approaches and methods are discussed that can be used to address these problems to achieve the appropriate balance between the social goods of biomedical Big Data research and the safety and privacy of individuals Seventeen original contributions analyse the ethical social and related policy implications of the analysis and curation of biomedical Big Data written by leading experts in the areas of biomedical research medical and technology ethics privacy governance and data protection The book advances our understanding of the ethical conundrums posed by biomedical Big Data and shows how practitioners and policy makers can address these issues going forward *Research Activities* ,2001 *AHRQ Research Activities* ,2002 **Therapeutic Revolutions** Jeremy A. Greene,Flurin Condrau,Elizabeth Siegel Watkins,2016-11-23 When asked to compare the practice of medicine today to that of a hundred

years ago most people will respond with a story of therapeutic revolution back then we had few effective remedies now we have more and more powerful tools to fight disease In this version of history medicine was made modern and effectual by medicines The aim of Therapeutic Revolutions is to challenge the linearity of this historical narrative provide a thicker explanation of the process of therapeutic transformation and explore the complex relationships between medicines and social change Working on three continents and touching upon the lived experiences of patients and physicians consumers and providers marketers and regulators the contributors to this volume together reveal the tensions between universal claims of therapeutic knowledge and the specificity of local sites in which they are put into practice asking collectively what is revolutionary about therapeutics
