Sustainable Development Anne E. Egelston,2012-09-14 This book documents the influence of nongovernmental organizations on the rise of the sustainable development movement in international politics It adds to the body of scholarly research on non governmental organizations by examining their political influence during the first two decades of international environmental politics from the Stockholm Conference on the Human Environment in 1972 to the establishment of the World Conference on Environment and Development in 1982 NGOs wielded their rational moral authority to achieve their goals in attending environmental mega conferences In turn these successes gave rise to a symbiotic relationship with the United Nations Environment Program and secured a seemingly permanent position at not only the negotiating table but also the inner hallways and back rooms of the United Nations

The Geography of Hope Chris Turner,2010-04-30 After the fierce warnings and grim predictions of The Weather Makers and An Inconvenient Truth acclaimed journalist and national bestselling author Chris Turner finds hope in the search for a sustainable future Point of no return The chilling phrase has become the ubiquitous mantra of ecological doomsayers a troubling headline above stories of melting permafrost and receding ice caps visions of catastrophe and fears of a problem with no solution Daring to step beyond the rhetoric of panic and despair The Geography of Hope points to the bright light at the end of this very dark tunnel With a mix of front line reporting analysis and passionate argument Chris Turner pieces together the glimmers of optimism amid the gloom and the solutions already at work around the world from Canada s largest wind farm to Asia s greenest building and Europe s most eco friendly communities But The Geography of Hope goes far

beyond mere technology Turner seeks out the next generation of political economic social and spiritual institutions that could provide the global foundations for a sustainable future from the green hills of northern Thailand to the parliament houses of Scandinavia from the villages of southern India where microcredit finance has remade the social fabric to America's most forward thinking think tanks In this compelling first person exploration punctuated by the wonder and angst of a writer discovering the world's beacons of possibility Chris Turner pieces together a dazzling map of the disparate landmarks in a geography of hope While most of the world has been spinning in stagnant circles of recrimination and debate on the subject of climate change paralyzed by visions of apocalypse both natural if nothing of our way of life changes and economic if too much does Denmark has simply marched off with steadfast resolve into the sustainable future reaching the zenith of its pioneering trek on the island of Sams And so if there's an encircled star on this patchwork map indicating hope's modest capital then it should be properly placed on this island Perhaps for the sake of precision at the geographic centre of Jrgen Tranberg's dairy farm There are I'm sure any number of images called to mind by talk of ecological revolution and renewable energy and sustainable living but I'm pretty certain they don't generally include a hearty fiftysomething Dane in rubber boots spotted with mud and cow shit Which is why Sams's transformation is not just revolutionary but inspiring not just a huge change but a tantalizingly attainable one And it was a change that seemed at its most workaday near effortless no more remarkable than the cool October wind gusting across the island down on Tranberg's farm from *The Geography of Hope*

The Untold Story of the World's Leading Environmental Institution Maria Ivanova, 2021-02-23 The past present and possible future of the agency designed to act as the world's environmental conscience The United Nations Environmental Programme UNEP was founded in 1972 as a nimble fast and flexible entity at the core of the UN system a subsidiary body rather than a specialized agency It was intended to be the world's environmental conscience an anchor institution that established norms and researched policy leaving it to other organizations to carry out its recommendations In this book Maria Ivanova offers a detailed account of UNEP's origin and history Ivanova counters the common criticism that UNEP was deficient by design arguing that UNEP has in fact delivered on much though not all of its mandate

Transnational Corporations and Human Rights Olivier De Schutter, 2006-09-11 This volume offers a systematic overview of the different tools through which the human rights accountability of transnational corporations may be improved It first examines the responsibility of States in controlling transnational corporations emphasizing both the limits imposed by the protection of the rights of investors under investment treaties and the potential of the US Alien Tort Claims Act and other similar extra territorial legislations It then turns to self regulation by transnational corporations through the use of codes of conduct or international framework agreements It then discusses recent attempts at the global level to improve the human rights accountability of corporations by the direct imposition on corporations of obligations under international law Finally it considers the use of public procurement policies or of conditionalities in the lending policies of multilateral lending

institutions in order to incentivize TNCs to behave ethically Altogether the book offers a rigorous legal analysis of these different developments and critically appraises their potential

International Organizations and Environmental Protection Wolfram Kaiser, Jan-Henrik Meyer, 2016-12-01 Pollution resource depletion habitat management and climate change are all issues that necessarily transcend national boundaries Accordingly they and other environmental concerns have been a particular focus for international organizations from before the First World War to the present day This volume is the first to comprehensively explore the environmental activities of professional communities NGOs regional bodies the United Nations and other international organizations during the twentieth century It follows their efforts to shape debates about environmental degradation develop binding intergovernmental commitments and following the seminal 1972

Conference on the Human Environment implement and enforce actual international policies

The Silwood Circle Hannah Gay, World Scientific (Firm), 2013 This is an original and wide ranging account of the careers of a close knit group of highly influential ecologists working in Britain from the late 1960s onwards The book can also be read as a history of some recent developments in ecology One of the group Robert May is a past president of the Royal Society and the author of what many see as the most important treatise in theoretical ecology of the later twentieth century That the group flourished was due not only to May's intellectual leadership but also to the guiding hand of T R E Southwood Southwood ended his career as Linacre Professor of Zoology at the University of Oxford where he also served a term as Vice Chancellor Earlier as a professor and director of the Silwood Park campus of Imperial College London he brought the group together Since it began to coalesce at Silwood it has been named here the Silwood Circle Southwood promoted the interests of its members with the larger aim of raising the profile of ecological and environmental science in Britain Given public anxiety over the environment and the loss of ecosystems his actions were well timed Ecology which had been on the scientific margins in the first half of the twentieth century came to be viewed as a science central to modern existence The book illustrates its importance to many areas Members of the Silwood Circle have acted as government advisors in the areas of conservation and biodiversity resource management pest control food policy genetically modified crops sustainable agriculture international development defence against biological weapons and epidemiology and infectious disease control In recounting the science they carried out and how they made their careers the book reflects also on the role of the group and the nature of scientific success

Worth Saving Anne Egelston, 2022-08-31 This textbook is intended to be used in an upper level international environmental issues class as part of the American Environmental Studies and Sciences book series This class is commonly taught at both the undergraduate and graduate level as part of either an environmental studies program a political science program or within a policy track of an environmental science program Given the length of time that negotiations have occurred a new generation of students and practitioners will need to understand the complex processes that produced many of our environmental treaties The majority

of the students in environmental studies do not have a background in political science Moving from a political science approach to an interdisciplinary approach will benefit the students by making the material more accessible As these fields continue to grow and develop regulatory compliance becomes increasingly important Thus this book is aimed at adding a business and industry perspective to this field where appropriate

Profit Mark Stoll,2022-11-08 Profit getting more out of something than you put into it is the original genius of homo sapiens who learned how to unleash the energy stored in wood exploit the land and refashion ecosystems As civilization developed we found more and more ways of extracting surplus value from the earth often deploying brutally effective methods to discipline people to do the work needed Historian Mark Stoll explains how capitalism supercharged this process and traces its many environmental consequences The financial innovations of medieval Italy created trade networks that with the European discovery of the Americas made possible vast profits and sweeping cultural changes to the detriment of millions of slaves and indigenous Americans the industrial age united the world in trade and led to an energy revolution that changed lives everywhere But when efficient production left society awash in goods a new sort of capitalism predicated on endless individual consumption took its place This story of incredible ingenuity and villainy begins in the Doge s palace in medieval Venice and ends with Jeff Bezos aboard his own spacecraft Mark Stoll s revolutionary account places environmental factors at the heart of capitalism s progress and reveals the long shadow of its terrible consequences
