Discovering Evolution Equations with Applications Mark McKibben, 2011-06-03 Most existing books on evolution equations tend either to cover a particular class of equations in too much depth for beginners or focus on a very specific research direction Thus the field can be daunting for newcomers to the field who need access to preliminary material and behind the scenes detail Taking an applications oriented conversation

Evolution Equations Gisele Ruiz Goldstein, Rainer Nagel, Silvia Romanelli, 2003-06-24 Celebrating the work of renowned mathematician Jerome A Goldstein this reference compiles original research on the theory and application of evolution equations to stochastics physics engineering biology and finance The text explores a wide range of topics in linear and nonlinear semigroup theory operator theory functional analysis and linear and nonlinear partial differential equations and studies the latest theoretical developments and uses of evolution equations in a variety of disciplines Providing nearly 500 references the book contains discussions by renowned

mathematicians such as H Brezis G Da Prato N E Gertsik I Lasiecka Peter Lax M M Rao and R Triggiani      Evolution Equations David Ellwood,Igor Rodnianski,Gigliola Staffilani,Jared Wunsch,2013-06-26 This volume is a collection of notes from lectures given at the 2008 Clay Mathematics Institute Summer School held in Zurich Switzerland The lectures were designed for graduate students and mathematicians within five years of the Ph D and the main focus of the program was on recent progress in the theory of evolution equations Such equations lie at the heart of many areas of mathematical physics and arise not only in situations with a manifest time evolution such as linear and nonlinear wave and Schrödinger equations but also in the high energy or semi classical limits of elliptic problems The three main courses focused primarily on microlocal analysis and spectral and scattering theory the theory of the nonlinear Schrödinger and wave equations and evolution problems in general relativity These major topics were supplemented by several mini courses reporting on the derivation of effective evolution equations from microscopic quantum dynamics on wave maps with and without symmetries on quantum N body scattering diffraction of waves and symmetric spaces and on nonlinear Schrödinger equations at critical regularity Although highly detailed treatments of some of these topics are now available in the published literature in this collection the reader can learn the fundamental ideas and tools with a minimum of technical machinery Moreover the treatment in this volume emphasizes common themes and techniques in the field including exact and approximate conservation laws energy methods and positive commutator arguments Titles in this series are co published with the Clay Mathematics Institute Cambridge MA      *Evolution Equations With A Complex Spatial Variable* Ciprian G Gal,Sorin G Gal,Jerome A Goldstein,2014-03-18 This book investigates several classes of partial differential equations of real time variable and complex spatial variables including the heat Laplace wave telegraph Burgers Black Merton Scholes Schrödinger and Korteweg de Vries equations The complexification of the spatial variable is done by two different methods The first method is that of complexifying the spatial variable in the corresponding semigroups of operators In this case the solutions are studied within the context of the theory of semigroups of linear operators It is also interesting to observe that these solutions preserve some geometric properties of the boundary function like the univalence starlikeness convexity and spirallikeness The second method is that of complexifying the spatial variable directly in the corresponding evolution equation from the real case More precisely the real spatial variable is replaced by a complex spatial variable in the corresponding evolution equation and then analytic and non analytic solutions are sought For the first time in the book literature we aim to give a comprehensive study of the most important evolution equations of real time variable and complex spatial variables In some cases potential physical interpretations are presented The generality of the methods used allows the study of evolution equations of spatial variables in general domains of the complex plane      **Controllability of Evolution Equations** A. V. Fursikov,O. Yu Imanuvilov,1996      *An Introduction to Semilinear Evolution Equations* Thierry Cazenave,Alain Haraux,1998 This book presents an upper level text on semilinear evolutionary partial differential equations

aimed at the graduate and postgraduate level Cazenave and Haraux present in a self contained way the typical basic properties of solutions to semi linear evolutionary partial differential equations with special emphasis on global properties The main objective of this book is to provide a didactic approach to the subject and the main readership will be graduate students in mathematical analysis as well as professional applied mathematicians

**Attractors of Evolution Equations** A.V. Babin, M.I. Vishik, 1992-03-09 Problems ideas and notions from the theory of finite dimensional dynamical systems have penetrated deeply into the theory of infinite dimensional systems and partial differential equations From the standpoint of the theory of the dynamical systems many scientists have investigated the evolutionary equations of mathematical physics Such equations include the Navier Stokes system magneto

hydrodynamics equations reaction diffusion equations and damped semilinear wave equations Due to the recent efforts of many mathematicians it has been established that the attractor of the Navier Stokes system which attracts in an appropriate functional space as  $t \rightarrow \infty$  all trajectories of this system is a compact finite dimensional in the sense of Hausdorff set Upper and lower bounds in terms of the Reynolds number for the dimension of the attractor were found These results for the Navier Stokes system have stimulated investigations of attractors of other equations of mathematical physics For certain problems in particular for reaction diffusion systems and nonlinear damped wave equations mathematicians have established the existence of the attractors and their basic properties furthermore they proved that as  $t \rightarrow \infty$  an infinite dimensional dynamics described by these equations and systems uniformly approaches a finite dimensional dynamics on the attractor  $U$  which in the case being considered is the union of smooth manifolds This book is devoted to these and several other topics related to the behaviour as  $t \rightarrow \infty$  of solutions for evolutionary equations

**Nonlinear Evolution Equations** Boling Guo, Fei Chen, Jing Shao, Ting Luo, 2019-11-05 Nonlinear Evolution Equation presents state of the art theories and results on nonlinear evolution equation showing related mathematical methods and applications The basic concepts and research methods of infinite dimensional dynamical systems are discussed in detail The unique combination of mathematical rigor and physical background makes this work an essential reference for researchers and students in applied mathematics and physics
