## Evolution From The Bottom Up:

**The Evolution of Multicellularity** Matthew D. Herron, Peter L. Conlin, William C. Ratcliff, 2022-06-07 Among the most important innovations in the history of life is the transition from single celled organisms to more complex multicellular organisms Multicellularity has evolved repeatedly across the tree of life resulting in the evolution of new kinds of organisms that collectively constitute a significant portion of Earth's biodiversity and have transformed the biosphere This volume examines the origins and subsequent evolution of multicellularity reviewing the types of multicellular groups that exist their evolutionary relationships the processes that led to their evolution and the conceptual frameworks in which their evolution is understood This important volume is intended to serve as a jumping off point stimulating further research by summarizing the topics that students and researchers of the evolution of multicellularity should be familiar with and highlighting future research directions for the field Chapter 13 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Rule-Based Evolutionary Online Learning Systems Martin V. Butz, 2006-01-04 Rule based evolutionary online learning systems often referred to as Michigan style learning classifier systems LCSs were proposed nearly thirty years ago Holland 1976 Holland 1977 originally calling them cognitive systems LCSs combine the strength of reinforcement learning with the generalization capabilities of genetic algorithms promising a flexible online generalizing solely reinforcement dependent learning system However despite several initial successful applications of LCSs and their interesting relations with machine learning and cognition understanding of the systems remained somewhat obscured Questions concerning learning complexity or convergence remained unanswered Performance in different problem types problem structures concept spaces and hypothesis spaces stayed nearly unpredictable This book has the following three major objectives 1 to establish a facetwise theory approach for LCSs that promotes system analysis understanding and design 2 to analyze evaluate and enhance the XCS classifier system Wilson 1995 by the means of the facetwise approach establishing a fundamental XCS learning theory 3 to identify both the major advantages of an LCS based learning approach as well as the most promising potential application areas Achieving these three objectives leads to a rigorous understanding of LCS functioning that enables the successful application of LCSs to diverse problem types and problem domains The quantitative analysis of XCS shows that the interactive evolutionary based online learning mechanism works machine learning competitively yielding a low order polynomial learning complexity Moreover the facetwise analysis approach facilitates the successful design of more advanced LCSs including Holland's originally envisioned cognitive systems Martin V. Butz *Experimental Evolution* Theodore Garland, Michael R. Rose, 2009-12-03 Experimental approaches to evolution provide indisputable evidence of evolution by directly observing the process at work Experimental evolution deliberately duplicates evolutionary processes forcing life histories to evolve producing adaptations to stressful environmental conditions and generating lineage splitting to create

incipient species This unique volume summarizes studies in experimental evolution outlining current techniques and applications and presenting the field's full range of research from selection in the laboratory to the manipulation of populations in the wild It provides work on such key biological problems as the evolution of Darwinian fitness sexual reproduction life history athletic performance and learning

**In the Light of Evolution** National Academy of Sciences, 2007-12-28 In December 2006 the National Academy of Sciences sponsored a colloquium featured as part of the Arthur M Sackler Colloquia series on Adaptation and Complex Design to synthesize recent empirical findings and conceptual approaches toward understanding the evolutionary origins and maintenance of complex adaptations Darwin's elucidation of natural selection as a creative natural force was a monumental achievement in the history of science but a century and a half later some religious believers still contend that biotic complexity registers conscious supernatural design In this book modern scientific perspectives are presented on the evolutionary origin and maintenance of complex phenotypes including various behaviors anatomies and physiologies After an introduction by the editors and an opening historical and conceptual essay by Francisco Ayala this book includes 14 papers presented by distinguished evolutionists at the colloquium The papers are organized into sections covering epistemological approaches to the study of biocomplexity a hierarchy of topics on biological complexity ranging from ontogeny to symbiosis and case studies explaining how complex phenotypes are being dissected in terms of genetics and development

**Big Questions in Ecology and Evolution** Thomas N. Sherratt, David M. Wilkinson, 2009-02-19 Why do we age Why cooperate Why do so many species engage in sex Why do the tropics have so many species When did humans start to affect world climate This book provides an introduction to a range of fundamental questions that have taxed evolutionary biologists and ecologists for decades Some of the phenomena discussed are on first reflection simply puzzling to understand from an evolutionary perspective whilst others have direct implications for the future of the planet All of the questions posed have at least a partial solution all have seen exciting breakthroughs in recent years yet many of the explanations continue to be hotly debated Big Questions in Ecology and Evolution is a curiosity driven book written in an accessible way so as to appeal to a broad audience It is very deliberately not a formal text book but

something designed to transmit the excitement and breadth of the field by discussing a number of major questions in ecology and evolution and how they have been answered This is a book aimed at informing and inspiring anybody with an interest in ecology and evolution It reveals to the reader the immense scope of the field its fundamental importance and the exciting breakthroughs that have been made in recent years Human Evolutionary Demography Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers whether or not they are currently familiar with human evolutionary demography

**The Foundations of Evolutionary Institutional Economics** Manuel Scholz-Wackerle, 2013-08-15 Generic institutionalism offers a new perspective on institutional economic change within an evolutionary framework The institutional landscape shapes the social fabric and economic organization in manifold ways The book elaborates on the ubiquity of such institutional forms with regards to their emergence durability and exit in social agency structure relations Thereby institutions are considered as social learning environments changing the knowledge base of the economy along generic rule sets in non nomological ways from within Specific attention is given to a theoretical structuring of the topic in ontology heuristics and methodology Part I introduces a generic naturalistic ontology by comparing prevalent ontological claims in evolutionary economics and preparing them for a broader pluralist and interdisciplinary discourse Part II reconsiders these ontological claims and confronts it with prevalent heuristics conceptualizations and projections of institutional change In this respect the book revisits the institutional economic thought of Thorstein Veblen Friedrich August von Hayek Joseph Alois Schumpeter and Pierre Bourdieu A synthesis

is suggested in an application of the generic rule based approach Part III discusses the implementation of rule based bottom up models of institutional change and provides a basic prototype agent based computational simulation The evolution of power relations plays an important role in the programming of real life communication networks This notion characterizes the discussed policy realms Part IV of ecological and financial sustainability as tremendously complex areas of institutional change in political economy leading to the concluding topic of democracy in practice The novelty of this approach is given by its modular theoretical structure It turns out that institutional change is carried substantially by affective social orders in contrast to rational orders as communicated in orthodox economic realms The characteristics of affective orders are derived theoretically from intersections between ontology and heuristics where interdependencies between instinct cognition rationality reason social practice habit routine or disposition are essential for the embodiment of knowledge This kind of research indicates new generic directions to study social learning in particular and institutional evolution in general

Human Evolution beyond Biology and Culture Jeroen C. J. M. van den Bergh, 2018-10-18 Both natural and cultural selection played an important role in shaping human evolution Since cultural change can itself be regarded as evolutionary a process of gene culture coevolution is operative The study of human evolution in past present and future is therefore not restricted to biology An inclusive comprehension of human evolution relies on integrating insights about cultural economic and technological evolution with relevant elements of evolutionary biology In addition proximate causes and effects of cultures need to be added to the picture issues which are at the forefront of social sciences like anthropology economics geography and innovation studies This book highlights discussions on the many topics to which such generalised evolutionary thought has been applied the arts the brain climate change cooking criminality environmental problems futurism gender issues group processes humour industrial dynamics institutions languages medicine music psychology public policy religion sex sociality and sports

**Social evolution and the what, when, why and how of the major evolutionary transitions in the history of life** Peter Nonacs, Heikki Helanterä, Karen Marie Kapheim, 2023-01-27 **The Evolutionary Roots of Human Brain Diseases** Nico J. Diederich, Martin Brüne, Katrin Amunts, Christopher G. Goetz, Professor of Neurological Sciences and Pharmacology Christopher G Goetz, 2024 Traditionally studies and textbooks in Neurology or Psychiatry as well as allied disciplines deal with proximate causes of diseases and therapies but remain mute or minimally interested in their ultimate causes including

the phylogeny and adaptive significance of disease manifestations Yet as clinicians or basic researchers we are conscious of potential evolutionary roots of neurological and psychiatric symptoms often offering a rudimentary explanation but never delving deeply into the current role of evolutionary science as it relates to health and disease We may miss appreciation of the role of adaptive properties evolutionarily based neuronal circuitries unbalanced cellular energy demands and the potential health consequences of residual syndromic behaviors that were possibly useful in early times of human development but presently are obsolete and pathological The problem is amplified because there is often no interdisciplinary dialogue between anthropology and evolutionary biology on one side and clinical sciences on the other side However the evolutionary tracing back of disease pathways may disclose unexpected insights and trigger the design of innovative research as well as propel the development of new therapeutic interventions There could also be a better apprehension of compensatory behaviors both at the cellular level as well as the systemic the behavioural levels that could be the expected fruits of such collaborations So far scientists fall short in modeling the complexity of human social life human language or manual dexterity and mental or emotional behaviors that typify human neurological or psychological function and dysfunction Finally there remain obstacles in the form of poor animal modeling for human brain diseases and for human longevity The present book aims to fill these gaps by presenting an evolutionary view of neurological and psychiatric conditions that is meant to complement and enrich existing medical perspectives
