Burns (zoologia), 1964 **University of California Publications in Entomology** University of California (Berkeley, U.S.A.), 1964 *Butterflies of British Columbia* Jon Shepard, Crispin Guppy, 2011-11-01 Butterflies are found everywhere in British Columbia from balcony planter boxes in the city to the vast unexplored expanses of boreal forest and mountains across the north and from coastal bogs and wild ocean shorelines to the deserts of the southern interior The total known fauna of 187 species of butterflies in B C is by far the largest and most diverse in Canada Butterflies of British Columbia summarizes all available information on the butterflies of B C The 187 species and 264 subspecies of butterflies known from B C as well as 9 additional hypothetical species are discussed with descriptions of identifying features immature stages larval foodplants biology and life history range and habitat and conservation status In addition descriptions are provided for 11 new subspecies Each species treatment also contains maps of the northwestern North American distribution colour photographs of adults of all species and subspecies and flight season graphs The book includes an extensive general introduction to the study of butterflies containing chapters on the history of butterfly study in B C the post glacial colonization of B C by butterflies the effects of European colonization on the fauna butterfly conservation butterfly gardening ecology morphology and biology Butterflies of British Columbia provides butterfly watchers naturalists and biologists with an overview of the fascinating butterfly fauna of B C and adjacent areas It can be used by naturalists to identify all the butterfly species and subspecies in B C and adjacent areas and includes a wide range of information about both butterflies in general and individual species There is also much original information in the book that scientists will find invaluable especially the description of 11 new subspecies and a complete reassessment of the taxonomy of the species *Evolutionary Biology* Max Hecht, 2012-12-06 The ninth volume of Evolutionary Biology represents a turning point in the history of this series The death of Theodosius Dobzhansky was a blow to the whole field of evolutionary biology in general and to his friends and colleagues including the other two Editors He played a central role in the selection of areas that were ripe for review papers and his circle of friends colleagues and students was so wide that he could always find exactly the most appropriate author and then convince him that he should prepare the paper Evolutionary Biology was founded in 1966 and the first volume published in 1967 Ten years and several vicissitudes later it seems advisable to restate the original concept of this serial publication The Preface of Volume 1 says simply We have conceived this serial as a forum in which critical reviews and commentaries as well as original papers and even controversial views can be brought together to cover a broad range of interest with provocative discussion Evolutionary Biology will provide research workers and students with an exceptional opportunity to read expert presentations of developments in areas of their field in which they are not specialists and as specialists they will see how others assess these developments An important feature is that contributions

are not necessarily limited in length subject and other restrictions that usually prevail in basic research journals
