## **Evolution Of Peculiar Red Giant Stars:**

**Evolution of Peculiar Red Giant Stars** International Astronomical Union. Colloquium, 1989-06-22 Red giant stars are evolutionarily advanced objects in the closing stages of their nuclear burning lifetime Observed with increasing spectral coverage they display a variety of unusual phenomena Many are characterized by peculiar non solar surface chemical compositions which provide otherwise unobtainable clues to interior nucleosynthesis mixing and evolution Others may have received their chemical peculiarities by mass transfer from a companion This book reports on the proceedings of the International Astronomical Union Colloquium 106 It contains discussions on many aspects of these stars combining theory and observation to interpret these objects in terms of their evolutionary history There are 20 review papers 69 abstracts and short contributed papers and a complete transcript of the valuable summary panel discussion Professional astronomers will find this book useful as a reference work which incorporates current research on the modelling and evolution of these unstable stars *Literature 1989, Part 1* Astronomisches Rechen-Institut, 2013-11-11 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Review Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine *Evolution of Peculiar Red Giant Stars* Hollis R. Johnson, Ben Zuckerman, 1989-06-22 This report of the proceedings of the International Astronomical Union Colloquium 106 contains discussions on many aspects of Red Giant Stars The book combines theory and observation to interpret these objects in terms of their evolutionary history Red Giant Stars are evolutionarily advanced objects in the closing stages of their nuclear burning lifetime Observed with increasing spectral coverage they display a variety of unusual phenomena Many are characterized by peculiar non solar surface chemical compositions that provide otherwise unobtainable clues to interior nucleosynthesis mixing and evolution Others may have received their chemical peculiarities by mass transfer from a companion There are 20 review papers 69 abstracts and short contributed papers and a complete transcript of the valuable summary panel discussion Professional astronomers and research students will find this a useful reference work **Allen's Astrophysical Quantities** Clabon Walter Allen, Arthur N. Cox, 2000 This new edition of

Allen's classic *Astrophysical Quantities* belongs on every astronomer's bookshelf. It has been thoroughly revised and updated by a team of internationally renowned team of astronomers and astrophysicists. Topics covered include General constants and units, Atoms, molecules and spectra, Observational astronomy at all wavelengths from radio to gamma rays and neutrinos, Planetary astronomy, Earth, planets and satellites and solar system small bodies, The Sun, normal stars and stars with special characteristics, Cataclysmic and symbiotic variables, supernovae, Theoretical stellar evolution, Circumstellar and interstellar material, Star clusters, galaxies, quasars and active galactic nuclei, Clusters and groups of galaxies, Cosmology.

**Planetary Nebulae** R. Weinberger, A. Acker, 2012-12-06 Planetary nebulae are a keystone for the understanding of the evolution of stars for deep insights into the physical processes prevailing in highly excited dilute nebulae and for the chemical evolution in galaxies. These objects displaying an intriguing morphology have a short lifetime of a few tens of thousands of years and have become one of the best studied classes of celestial sources. However, despite large and successful efforts from both the observational and theoretical side, planetary nebulae still keep some of their secrets like the widely unknown distances and will undoubtedly also be objects of thorough investigations in the years to come. *Annual Report Lawrence Livermore National Laboratory. Institute of Geophysics and Planetary Physics*, 1988.

**The Carbon Star Phenomenon** International Astronomical Union. Symposium, 2000-07-31. Proceedings of the 177th Symposium of the International Astronomical Union held in Antalya, Turkey, May 27-31, 1996.

**Stellar Atmospheres: Beyond Classical Models** L. Crivellari, Ivan Hubeny, D. Hummer, 2012-12-06 The theory of stellar atmospheres is one of the most important branches of modern astrophysics. It is first of all a major tool for understanding all aspects of stars. As the physical properties of their outer layers can now be found with high precision, firm conclusions can be drawn about the internal structure and evolution of stars. Moreover, improvements in our knowledge of the chemical composition of stars is shedding new light on the chemical evolution of galaxies and of the Universe as a whole. Because the outer layers of stars are among the best understood astrophysical objects, the theory of stellar atmospheres plays an important role in the study of many other types of objects. These include planetary nebulae, H II regions, interstellar matter and objects of interest in high energy astrophysics such as accretion disks, close binaries, dwarf novae, cataclysmic variables, quasars, active galactic nuclei, pulsar magnetospheres and Seyfert galaxies. Finally, as stars provide a laboratory in which plasmas can be studied under more extreme conditions than on Earth, the study of stellar atmospheres has strong connections with modern physics. Astronomical observations provided a vital stimulus in the early stages of quantum theory and atomic physics; even today, topics such as low temperature dielectronic recombination develop hand in hand with the interpretation of stellar and nebular spectra. Early work on MHD was similarly motivated. Many such connections remain to be explored.

**Cosmic Winds and the Heliosphere** J. R. Jokipii, C. P. Sonett, Mark S. Giampapa, 2018-01-30 Until the advent of space physics, astrophysical plasmas could be studied only using ground-based observations. Although observational methods have advanced over recent decades, the merging of heliospheric physics with

astrophysics is far from complete due to the vastly different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists **Astrophysical Ages and Dating Methods** Elisabeth Vangioni-Flam,1990 *Nuclear Science*

*Abstracts* ,1975 The Numerical Modelling of Nonlinear Stellar Pulsations J. Robert Buchler,2012-12-06 This interdisciplinary meeting has brought together a group of astrophysicists with hands on experience in the numerical computation of astrophysical fluid dynamics in particular nonlinear stellar pulsations and a group of applied mathematicians who are actively engaged with the development of novel and improved numerical methods The goal of the workshop has been for the astrophysicists to discuss in detail the numerical problems encountered in the modelling of stellar pulsations and for the mathematicians to present a survey of recent developments in numerical techniques This astrophysical mathematical intercourse will help the astrophysicists in the future development of more reliable and efficient codes on the one hand and it has introduced the mathematicians to an unfamiliar area which is a tough testing ground for their techniques Since the difficulties encountered are common to other fluid dynamics problems and are in fact perhaps more severe fluid dynamicists in other research areas may find the results of this workshop of interest as well Much of our theoretical understanding of the intricate and interesting behavior of variable stars rests on our ability to perform accurate numerical hydrodynamical computations of stellar models Extensive calculations of nonlinear radial stellar pulsations with the use of increasingly powerful computers are showing more and more clearly that the numerical codes in current use have serious deficiencies

Interpreting Astronomical Spectra D. Emerson,1998-02-04 Interpreting Astronomical Spectra D Emerson Institute for Astronomy Department of Physics and Astronomy The University of Edinburgh Interpreting Astronomical Spectra describes how physical conditions such as temperature density and composition can be obtained from the spectra of a broad range of astronomical environments ranging from the cold interstellar medium to very hot coronal gas and from stellar atmospheres to quasars In this book the author has succeeded in providing a coherent and integrated approach to the interpretation of astronomical spectroscopy placing the emphasis on the physical understanding of spectrum formation rather than on

instrumental considerations MKS units and consistent symbols are employed throughout so that the fundamental ideas common to diverse environments are made clear and the importance of different temperature ranges and densities can be seen Aimed at senior undergraduates and graduates studying physics astronomy and astrophysics this book will also appeal to the professional astronomer

Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is de voted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the averagetime interval between the date of receipt of the original

literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 17 contains literature published in 1976 and received before August 15, 1976, some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy. We want to acknowledge valuable contributions to this volume by Zentralstelle für Atomkernenergie Dokumentation Leopoldshafen which supported our abstracting service by sending us retrospective literature searches.
