## **Evolution Of The Mind:**

The Evolution of Mind Denise D. Cummins, Colin Allen, 1998 Our understanding of the human mind has radically changed in recent years from the unified mind once envisioned by Rene Descartes over three hundred years ago to a new understanding of mind as a set of specialized cognitive components gradually accumulated in our evolutionary past As a result many scientists and philosophers now believe that our minds emerged out of the same type of evolutionary processes that have shaped our bodies In The Evolution of Mind outstanding figures on the cutting edge of evolutionary psychology follow clues provided by current neuroscientific evidence to illuminate many puzzling questions of human cognitive evolution With contributions from psychologists ethologists anthropologists and philosophers the book offers a broad range of approaches to explore the mysteries of the mind's evolution from investigating the biological functions of human cognition to drawing comparisons between human and animal cognitive abilities This interdisciplinary work presents a comparative and evolutionary perspective on a wide variety of topics including mental algorithms for reasoning about contingencies quantities social norms and the minds of others social play and communicative abilities thought and language and the role of Darwin's theory of natural selection in evolutionary psychology Written in a highly readable style The Evolution of Mind will appeal to a broad range of researchers and students and help set the agenda for the field for years to come

Evolution of Mind, Brain, and Culture Gary Hatfield, Holly Pittman, 2013-05-28 Descartes boldly claimed I think therefore I am But one might well ask Why do we think How When and why did our human ancestors develop language and culture In other words what makes the human mind human Evolution of Mind Brain and Culture offers a comprehensive and scientific investigation of these perennial questions Fourteen essays bring together the work of archaeologists cultural and physical anthropologists psychologists philosophers geneticists a neuroscientist and an environmental scientist to explore the evolution of the human mind the brain and the human capacity for culture The volume represents and critically engages major theoretical approaches including Donald's stage theory Mithen's cathedral model Tomasello's joint intentionality and Boyd and Richerson's modeling of the evolution of culture in relation to climate change No recent publication combines this breadth of evidential and theoretical perspective The essays range in topic from the macroscopic the evolution of social cooperation to the microscopic examining genetic data to infer evolutions in brain structure and function and from the ancient paleoanthropological reconstructions of hominin cognitive abilities to the modern including modern hominin's similarities to our primate cousins Considered together these essays constitute a fascinating detailed look at what makes us human PMIRC volume 5

The Long Evolution of Brains and Minds Gerhard Roth, 2013-06-03 The main topic of the book is a reconstruction of the evolution of nervous systems and brains as well as of mental cognitive abilities in short intelligence from simplest organisms to humans It investigates to which extent the two are correlated One central topic is the alleged uniqueness of the human brain and human intelligence and mind It is discussed which neural features make certain animals

and humans intelligent and creative Is it absolute or relative brain size or the size of intelligence centers inside the brains the number of nerve cells inside the brain in total or in such intelligence centers decisive for the degree of intelligence of mind and eventually consciousness And which are the driving forces behind these processes Finally it is asked what all this means for the classical problem of mind brain relationship and for a naturalistic theory of mind

**A Mind So Rare** Merlin Donald, 2001 Donald psychology Queen s University Canada challenges the prevailing view that seeks to explain away human consciousness and presents a theory on the origins of the modern mind He describes the cultural and neuronal forces that power human modes of awareness and proposes that the human mind is a hybrid product of the interweaving of the brain with an invisible symbolic web of culture to form a distributed cognitive network Using evidence from brain and behavioral studies of humans and animals he explains how an expansion of consciousness transcends the limitations of the mammalian mind and elaborates the foundations of self evaluation and self reflection c Book News Inc
