The Evolution of Computation in Architecture Michael Fox, Bradley Bell, 2024-10-31 This book is the first comprehensive overview of the pioneering works events and people that contributed to the paradigm shift defined by computation in architecture Only recently has computation fostered profound new ways of designing fabricating constructing and thinking about architecture While the profession sits at the end of the beginning of this historically transformative shift it is now possible to look back upon the rapidly maturing landscape of projects influencers and tools that have finally begun to catch up with the visionary thinking of the past Readers are guided through the fascinating and fast paced historical timeline of the development of computation in architecture Beginning with an account of the pioneering futuristic thinkers the authors then guide the reader through the birth of computation the appropriation of tools and the impact of experimentation on the profession leading into the legitimacy of research and how paradigms have been expanded The examples and influences are presented in a way that they can be understood and built upon This book is a must read for students of computation in architecture as well as researchers and practicing architects thinking about how the tools we use and the ways we design our buildings and environments with them can truly impact our lives

Creative Evolutionary Systems Peter Bentley, Peter J. Bentley, David W. Corne, 2002 Written for computer scientists and students and computer literate artists designers and specialists in evolutionary computation this text brings together the

most advanced work in the use of evolutionary computation for creative results Evolutionary Architecture Eugene Tsui,1999-04 This book uncovers the guiding principles behind Tsui's evolutionary approach to explore the many design lessons that can be learned from nature and share the impressive results of their application to architectural projects

Engineering Evolutionary Intelligent Systems Ajith Abraham, Crina Grosan, Witold Pedrycz,2008-01-03 This edited volume deals with the theoretical and methodological aspects as well as various evolutionary algorithm applications to many real world problems originating from science technology business and commerce It comprises 15 chapters including an introductory chapter which covers the fundamental definitions and outlines some important research challenges Chapters were selected on the basis of fundamental ideas concepts rather than the thoroughness of techniques deployed An Evolutionary Architecture John Frazer,1995 Evolutionary architecture attempts to evolve form and structure in emulation of the evolutionary processes of nature It considers architecture as a form of artificial life This approach has formed the basis for the author's teaching programme for AA Diploma Unit II *Evolutionary Design and Manufacture* I.C.

Parmee,2012-12-06 The fourth evolutionary adaptive computing conference at the University of Plymouth again explores the utility of various evolutionary adaptive search algorithms and complementary computational intelligence techniques within design and manufacturing The content of the following chapters represents a selection of the diverse set of papers presented at the conference that relate to both engineering design and also to more general design areas This expansion has been the result of a conscious effort to recognise generic problem areas and complementary research across a wide range of design and manufacture activity There has been a major increase in both research into and utilisation of evolutionary and adaptive systems within the last two years This is reflected in the establishment of major annual joint US genetic and evolutionary computing conferences and the introduction of a large number of events relating to the application of these technologies in specific fields The Plymouth conference remains a long standing event both as ACDM and as the earlier ACEDC series The conference maintains its policy of single stream presentation and associated poster and demonstrator sessions The event retains the support of several UK Engineering Institutions and is now recognised by the International Society for Genetic and Evolutionary Computation as a mainstream event It continues to attract an international audience of leading researchers and practitioners in the field *Mastering API Architecture* James Gough, Daniel Bryant, Matthew Auburn,2021-03-19 Most

organizations with a web presence build and operate APIs the doorway for customers to interact with the company's services Designing building and managing these critical programs affect everyone in the organization from engineers and product owners to C suite executives But the real challenge for developers and solution architects is creating an API platform from the ground up With this practical book you'll learn strategies for building and testing REST APIs that use API gateways to combine offerings at the microservice level Authors James Gough Daniel Bryant and Matthew Auburn demonstrate how simple additions to this infrastructure can help engineers and organizations migrate to the cloud and open the opportunity to

connect internal services using technologies like a service mesh Learn API fundamentals and architectural patterns for building an API platform Use practical examples to understand how to design build and test API based systems Deploy operate and configure key components of an API platform Use API gateways and service meshes appropriately based on case studies Understand core security and common vulnerabilities in API architecture Secure data and APIs using threat modeling and technologies like OAuth2 and TLS Learn how to evolve existing systems toward API and cloud based architectures

Fractal Architecture James Harris, 2012-07-15 Throughout history nature has served as an inspiration for architecture and designers have tried to incorporate the harmonies and patterns of nature into architectural form Alberti Charles Renee Macintosh Frank Lloyd Wright and Le Corbusier are just a few of the well known figures who have taken this approach and written on this theme With the development of fractal geometry the study of intricate and interesting self similar mathematical patterns in the last part of the twentieth century the quest to replicate nature s creative code took a stunning new turn Using computers it is now possible to model and create the organic self similar forms of nature in a way never previously realized In Fractal Architecture architect James Harris presents a definitive lavishly illustrated guide that explains both the how and why of incorporating fractal geometry into architectural design

The Evolution of Designs Philip Steadman, 2008-06-03 The Evolution of Designs tells the history of the many analogies that have been made since the end of the eighteenth century between the evolution of organisms and the human production of artefacts especially buildings

Biomimetic Research for Architecture and Building Construction Jan Knippers, Klaus G. Nickel, Thomas Speck, 2016-12-19 This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative

Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tübingen The programme is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable development in architecture and building construction

Eco-architecture III Santiago Hernández, 2010-03-16

This book contains most of the papers presented in the Eco Architecture 2010 conference which was the third edition of the International Conference on Harmonisation between Architecture and Nature Previous editions that were very successful were held previously in the New Forest UK in 2006 and the Algarve Portugal in 2008 and demonstrated the importance of a forum like this to discuss the characteristics and challenges of such architectural vision Eco Architecture implies a new approach to the design process intended to harmonise its products with nature This involves ideas such as minimum use of

energy at each stage of the building process taking into account the amount required during the extraction and transportation of materials their fabrication assembly building erection maintenance and eventual future recycling Presentations in the conference were related to topics like building technologies design by passive systems design with nature ecological and cultural sensitivity life cycle assessment quantifying sustainability in architecture resources and rehabilitation and issues from education research and practice Case studies from different places around the world were also presented

Architecture in Digital Culture Socrates Yiannoudes, 2022-12-14 This book examines the manifestations of architecture cities and design processes within digital culture Adopting a comparative and critical method the author looks at past and present encounters of the digital with architectural discourse and practice Along three central themes machines networks and computation the book begins by discussing transformations of the analogy between architecture and the machine since the early twentieth century foregrounding questions about the relations between architecture humans machines and the environment It moves on to the city to observe how big data and smart city sustainable management systems have transformed historical visions of global networked cities Lastly it explores computational design thinking historically and in the context of complex systems as well as the latest technical social and economic developments Exposing possible drawbacks while still focusing on what is radically innovative this book proposes a way toward more liberating digital and sustainable futures for architecture An important read for architecture students academics and professionals this book connects instances of digital architecture practice and discourse throughout the history of the digital culture paradigm and their ties with sociopolitical developments It shares the possibility that these connecting lines may be the canvas for a novel architectural history of the recent past
