Catastrophes and Lesser Calamities

Anthony Hallam, 2005-07-14 This is a book about the dramatic periods in the Earth's history called mass extinctions short periods by geological standards when life nearly died out on Earth The most famous is the mass extinction that happened about 65 million years ago and that caused the death of the dinosaurs But that was not the worst mass extinction that honour goes to the extinction at the end of the Permian Period about 250 million years ago when over 90% of life is thought to have become extinct What caused these catastrophes Was it the effects of a massive meteorite impact There is evidence for such an impact about 65 million years ago Or was it a period of massive volcanic activity There is evidence in the rocks of huge lava flows at periods that match several of the mass extinctions Was it something to do with climate change and sea level Or was it a combination of some or all of these The question has been haunting geologists for a number of years and it forms one of the most exciting areas of research in geology today In this book Tony Hallam a distinguished geologist and writer looks at all the different theories and also what the study of mass extinctions might tell us about the future If climate change is a key factor we may well as some scientists have suggested be in a period of mass extinction of our own making

Evolutionary Conservation Biology Régis Ferrière, Ulf Dieckmann, Denis Couvet, 2004-06-10 As anthropogenic environmental changes spread and intensify across the planet conservation biologists have to analyze dynamics at large spatial and temporal scales Ecological and evolutionary processes are then closely intertwined In particular evolutionary responses to anthropogenic environmental change can be so fast and pronounced that conservation biology can no longer afford to ignore them To tackle this challenge areas of conservation biology that are disparate ought to be integrated into a

unified framework Bringing together conservation genetics demography and ecology this book introduces evolutionary conservation biology as an integrative approach to managing species in conjunction with ecological interactions and evolutionary processes Which characteristics of species and which features of environmental change foster or hinder evolutionary responses in ecological systems How do such responses affect population viability community dynamics and ecosystem functioning Under which conditions will evolutionary responses ameliorate rather than worsen the impact of environmental change

EVOLUTION Leonid E. Grinin ,Andrey V. Korotayev, Every time we work on this Yearbook we are focused on making at least a small step forward to gradual elaboration of a megaevolutionary paradigm which is designed to create a united scientific field for cross disciplinary studies The present volume is the seventh issue of the Evolution Yearbook series Our Yearbooks are designed to present to its readers the widest possible spectrum of subjects and issues from universal evolutionism to the analysis of particular evolutionary regularities in the development of biological abiotic and social systems culture cognition language etc The main objective of our Yearbook is the creation of a unified interdisciplinary field of research within which scientists specializing in different disciplines could work within the framework of unified or similar paradigms using common terminology and searching for common rules tendencies and regularities Global evolution in connection with the Big History becomes the main subject of our Yearbook We strive to arrange each issue in such a way that the line from cosmic evolution to the human future is evident The title of this issue Evolutionary Aspects Stars Primates and Religion is fully justified The volume consists of three sections Megaevolution and Cosmic Evolution Biosocial and Social Evolution Reviews and Notes This Yearbook will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions as well as for those who are interested in evolutionary issues of Cosmology Biology History Anthropology Economics and other areas of study More than that this edition will challenge and excite your vision of your own life and the new discoveries going on around us

Complex Evolutionary Dynamics in Urban-Regional and Ecologic-Economic Systems J. Barkley Rosser,2011-06-22 Drawing on the middle chapters from the first edition of J Barkley Rosser s seminal work From Catastrophe to Chaos this book presents an unusual perspective on economics and economic analysis Current economic theory largely depends upon assuming that the world is fundamentally continuous However an increasing amount of economic research has been done using approaches that allow for discontinuities such as catastrophe theory chaos theory synergetics and fractal geometry The spread of such approaches across a variety of disciplines of thought has constituted a virtual intellectual revolution in recent years This book reviews the applications of these approaches in various subdisciplines of economics and draws upon past economic thinkers to develop an integrated view of economics as a whole from the perspective of inherent discontinuity

Artificial Life IX Jordan B. Pollack,2004 Proceedings from the ninth International Conference on Artificial Life papers by scientists of many disciplines focusing on the principles of organization and applications of complex life like systems Artificial Life is an interdisciplinary effort to

investigate the fundamental properties of living systems through the simulation and synthesis of life like processes The young field brings a powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction Some of the fundamental questions include What are the principles of evolution learning and growth that can be understood well enough to simulate as an information process Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes How can we unify theories from dynamical systems game theory evolution computing geophysics and cognition The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community

Controversy Catastrophism and Evolution Trevor Palmer,2012-12-06 In Controversy Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record

Evolution Michael Ruse,Joseph Travis,2009-02-28 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope Evolution opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development evo devo and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linneaus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Piltown Man to the Scopes trial and social Darwinism Readers will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the Origin of Species this volume is a fitting tribute to the science Darwin set in motion

The Structure of Evolutionary Theory Stephen Jay Gould,2002-03-21 The world s most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its

historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century

Extinction P. B. Wignall, 2019 Extinction has occurred throughout the history of life and nearly all the species that have ever existed have now disappeared In this Very Short Introduction Paul B Wignall looks at the causes and nature of extinction events what makes a species vulnerable and the debates in modern science of the role of climate and humans

A Comparison of the Dynamical Evolution of Planetary Systems Rudolf Dvorak, Sylvio Ferraz-Mello, 2006-01-16 The papers in this volume cover a wide range of subjects covering the most recent developments in Celestial Mechanics from the theoretical point of nonlinear dynamical systems to the application to real problems We emphasize the papers on the formation of planetary systems their stability and also the problem of habitable zones in extrasolar planetary systems A special topic is the stability of Trojans in our planetary system where more and more realistic dynamical models are used to explain their complex motions besides the important contribution from the theoretical point of view the results of several numerical experiments unraveled the structure of the stable zone around the librations points This volume will be of interest to astronomers and mathematicians interested in Hamiltonian mechanics and in the dynamics of planetary systems

The Evolution of Death Stanley Shostak, 2012-02-01 In The Evolution of Death the follow up to Becoming Immortal Combining Cloning and Stem Cell Therapy also published by SUNY Press Stanley Shostak argues that death like life can evolve Observing that literature philosophy religion genetics physics and gerontology still struggle to explain why we die Shostak explores the mystery of death from a biological perspective Death Shostak claims is not the end of a linear journey static and indifferent to change Instead he suggests the current efforts to live longer have profoundly affected our ecological niche and we are evolving into a long lived species Pointing to the artificial means currently used to prolong life he argues that as we become increasingly juvenilized in our adult life death will become significantly and evolutionarily delayed As bodies evolve the embryos of succeeding generations may be accumulating the stem cells that

preserve and restore providing the resources necessary to live longer and longer If trends like this continue Shostak contends future human beings may join the ranks of other animals with indefinite life spans **Biodiversity Dynamics** Michael L. McKinney, James A. Drake, 2001-04-12 How will patterns of human interaction with the earth's ecosystem impact on biodiversity loss over the long term not in the next ten or even fifty years but on the vast temporal scale be dealt with by earth scientists This volume brings together data from population biology community ecology comparative biology and paleontology to answer this question **Extinction** Michael Charles Boulter, 2002 The head of the team analyzing Fossil Record 2 the largest database of information on extinct animals and plants brings us a thoroughly researched introduction to the new developments in the science of life and a chilling account of the effects that humans have had on the planet based on his experience and research **Complexity, Institutions and Public Policy** Graham Room, 2011 I think this is a very important book Very few people in the social sciences write books on this topic and really do justice to complexity theory Professor Room gives a very detailed accurate and accessible review of complexity theory as it applies to social policy His link with institutional theory is very appropriate and his discussion on the need for regulation a link with complexity theory that many people would never reach is really important and well grounded It would be of interest to academics who really want to understand the implications of complexity theory for policy making in complex and fast changing situations and to those undertaking advanced courses in politics economics and sociology Jean Boulton University of Cranfield UK Graham Room argues that conventional approaches to the conceptualisation and measurement of social and economic change are unsatisfactory As a result researchers are ill equipped to offer policy advice This book offers a new analytical approach combining complexity science and institutionalism It also provides tools for policy makers in turbulent times Part 1 is concerned with the conceptualisation of socio economic change It integrates complexity science and institutionalism into a coherent ontology of social and policy dynamics Part 2 is concerned with models and measurement It combines some of the principal approaches developed in complexity analysis with models and methods drawn from mainstream social and political science Part 3 offers empirical applications to public policy the dynamics of social exclusion the social dimension of knowledge economies the current financial and economic crisis These are supplemented by a toolkit for the practice of agile policy making **Bringing Fossils to Life** Donald R. Prothero, 2013-11-12 The leading textbook in its field this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics Written for biology and geology undergrads the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books emphasizing the cataloguing of live organisms over dead objects This third edition revises art and research throughout expands the coverage of invertebrates includes a discussion of new methodologies and adds a chapter on the origin and early evolution of life **The Evolving Universe and the Origin of Life** Pekka Teerikorpi, Mauri Valtonen, K. Lehto, Harry

Lehto, Gene Byrd, Arthur Chernin, 2008-12-29 Sir Isaac Newton famously said regarding his discoveries If I have seen further it is by standing upon the shoulders of giants The Evolving Universe and the Origin of Life describes complete with fascinating biographical details of the thinkers involved the ascent to the metaphorical shoulders accomplished by the greatest minds in history For the first time a single book can take the reader on a journey through the history of the universe as interpreted by the expanding body of knowledge of humankind From subatomic particles to the protein chains that form life and expanding in scale to the entire universe this book covers the science that explains how we came to be The Evolving Universe and the Origin of Life contains a great breadth of knowledge from astronomy to physics from chemistry to biology It includes over 350 figures that enhance the comprehension of concepts both basic and advanced and is a non technical easy to read text at an introductory college level that is ideal for anyone interested in science as well as its history **Vertebrate Palaeontology** Michael J. Benton, 2009-02-05 Vertebrate Palaeontology is a complete up to date history of the evolution of vertebrates The third edition of this popular text has been extensively revised to incorporate the latest research including new material from North and South America Australia Europe China Africa and Russia Highlights astonishing new discoveries including new dinosaurs and Mesozoic birds from China features a new chapter on how to study fossil vertebrates provides an increased emphasis on the cladistic framework with cladograms set apart from the body of the text and full lists of diagnostic characters includes new molecular evidence on early mammal diversification new features aid study including new functional and developmental feature spreads key questions and extensive references to useful web sites strong phylogenetic focus making it an up to date source of the latest broad scale systematic data on vertebrate evolution To access the artwork from the book please visit <http://www.blackwellpublishing.com/benton> a An Instructor manual CD ROM for this title is available Please contact our Higher Education team at HigherEducation@wiley.com for more information **Perilous Planet Earth** Trevor Palmer, 2003-06-12 A readable account of the history of natural disasters throughout history
